# Washington State Economic and Revenue Forecast

Prepared by the Economic and Revenue Forecast Council

March 2013 Volume XXXVI, No. 1

# **Preface**

#### **ERFC** forecasting structure and schedule

The Economic and Revenue Forecast Council is required by Chapter 231, Section 34, Laws of 1992 (RCW 82.33.020) to prepare a quarterly state economic and revenue forecast and submit it to the Forecast Council. This report presents the state's economic and General Fund-State revenue forecast. It is issued four times a year. The Washington State GF-S revenue forecast is prepared quarterly in conjunction with the state economic forecast for the Economic and Revenue Forecast Council. The Council consists of six members, two appointed by the Governor and four appointed by the Legislature - one from each caucus of the Senate and House of Representatives. Current members of the Economic and Revenue Forecast Council are listed inside the front cover of this publication. The GF-S revenue forecast is updated four times per year: March (February in even-numbered years), June, September, and November. The staff of the Economic and Revenue Forecast Council is responsible for the preparation of the state's economic forecast and the forecast of the Department of Revenue's GF-S revenue sources as well as GF-S revenue from fines and forfeitures collected by the Administrative Office of the Courts. The staff is also responsible for review and coordination of the revenue forecasts of other agencies that collect relatively large amounts of GF-S revenue. These are the Department of Licensing, the Office of the Insurance Commissioner, the Lottery Commission, the State Treasurer, the Liquor Control Board and the Office of Financial Management. The Office of Financial Management is responsible for summarizing the forecasts of all other state agencies that collect relatively smaller amounts of GF-S revenue.

#### **Forecast Procedure**

For each quarterly update, the staff of the Economic and Revenue Forecast Council, under the direction of the Executive Director, reviews (and if warranted, modifies) a national economic forecast prepared by Global Insight, Inc. A state economic forecast is then prepared using an econometric model that links Washington's economy to the national economy. After review by forecast workgroups; the Governor's Council of Economic Advisors; and the Economic and Revenue Forecast Council in public; this state economic forecast (updated for newly released data) is used to prepare a baseline revenue forecast for GF-S and the related funds. The forecasts are based on current law and administrative practices and do not reflect pending legal challenges to GF-S receipts until they are resolved. Additionally, at least two alternative forecasts are prepared for all GF-S and related fund sources and presented to the Forecast Council for approval. Once the Council approves the forecast, it becomes the official forecast of GF-S and related fund revenues.

Data in this publication are accurate through March 28, 2013

### **Executive Summary**

- The economic forecast is slightly weaker than in November, with lower U.S. GDP and Washington personal income but higher Washington housing permits
- The national and Washington economies continue to move forward at a modest pace. Economic fundamentals continue to improve and private-sector growth has firmed.
- Federal fiscal policy remains at the forefront of economic uncertainty. Automatic spending cuts and higher taxes have reduced personal income.
- The sovereign debt crisis in Europe remains a significant threat to the U.S. economy. If this leads to a financial crisis, the U.S. economy could enter a new recession as well. Slowing Asian economies, and threats to world oil supplies also pose risks to the U.S. economic recovery.
- Consumer attitudes appear to be firming after the latest setback caused by fiscal policy missteps, although spending remains subdued. Job growth has been above expectations, and is starting to make a dent in unemployment.
- The housing sector has continued to show further signs of improvement and home prices continue to appreciate. The manufacturing sector, which had been a bright spot in the recovery, has lost momentum.
- Except for transportation equipment, Washington exports have weakened.
- Inflation in the Seattle area has slowed.
- We expect the Washington economy to continue to outperform the U.S. economy by a narrow margin.
- Due to a \$125 million positive variance in collections since November, forecasted General Fund-State revenue for the 2011-13 biennium has increased by \$59 million despite a decreased outlook for the rest of the biennium.
- The weaker economic forecast has resulted in reductions to forecasted revenue of \$19 million in the 2013-15 biennium and \$49 million in the 2015-17 biennium.
- The revenue impacts of the weaker overall outlook were softened somewhat by an improved forecast of housing construction and sales.

#### **U.S. Economic Forecast**

The national economy continues to move forward at a modest pace with weak growth and high unemployment. The economy's fundamentals continue to improve and private-sector growth has The economic recovery remains modest

firmed. Economic activity since the November forecast has generally been in line with the baseline scenario. Despite the pause in growth at the end of last year, the recovery has continued, although there remain several headwinds that could push the U.S. back into recession. We expect the economy to continue to grow and gradually pick up momentum. The housing recovery is gathering momentum across all dimensions. Consumer confidence remains fragile, but the trend appears positive. Policy headwinds from the nation's capital and recent global events have kept uncertainty elevated, however, and have acted as a drag on growth. The level of downside uncertainty in the baseline remains high.

Uncertainty continues to surround federal fiscal policy There continues to be uncertainty regarding federal fiscal policy. Since the November forecast was adopted, a bill was passed to avoid most of the tax increases and budget cuts that made up the "fiscal cliff." However, there was significant fiscal tightening as the payroll tax on employee wages rose and the top income tax rate for households with taxable income over \$450,000 per year was increased. In addition, automatic sequester spending cuts kicked in on March 1<sup>st</sup> consisting of \$1.2 trillion in spending reductions over nine years from 2013 through 2021. Unlike fiscal policy, monetary policy remains accommodative. The present monetary policy stance of aggressive monetary expansion until the labor market outlook improves substantially is likely to remain in place.

Troubles in Europe remain a significant threat to the U.S. economy

Europe remains a significant threat to the U.S. economy. Europe has entered into another recession, further complicating the debt troubles faced by many countries. The unemployment rate has continued to increase for the past two years and again hit a record high of 11.9 percent in January. Growth in gross domestic product in the 17 country Eurozone has been negative for five consecutive quarters, fueled in part by weakness in consumer spending. The combination of negative economic growth and rising borrowing costs puts countries like Greece, Spain and Italy at increased risk of default.

GDP growth has been weak, but is expected to pick up The U.S. economy grew at a dismal 0.4% annualized rate (SAAR) in the fourth quarter of 2012. This was down from the third quarter's 3.1% growth. The Blue Chip Consensus GDP forecast, our starting point each forecast cycle, now calls for real GDP growth of 1.9% in 2013 and 2.7% in 2014. Real GDP growth is down slightly from the previous forecast in 2013 and 2014 which had called for growth of 2.0% and 2.8%. Real GDP growth is expected to be 3.1% in 2015, 2.9% in 2016, and 2.8% in 2017.

The housing sector continues to improve...

The housing sector has continued to show further signs of improvement. The level of activity is not yet back to normal, but it is clear that the sector has finally turned a corner. New home sales, single-family housing starts, and single-family permits

Executive Summary 2

...while manufacturing has slowed have all continued trending up in recent months. Prices have been increasing as well, helped by tight inventories. While housing has returned to growth, the manufacturing sector has lost momentum. The sluggish growth in the manufacturing is likely to continue in the near term as the effects of the sequester materialize, conditions in Europe deteriorate, and uncertainty of U.S. fiscal policy drags on.

#### **Washington Economic Forecast**

The revisions to the forecast were small

The Washington State forecast is based on a new national forecast that is very similar to the forecast adopted in November. As a result, the revisions to the state forecast were also minimal.

Housing construction has been higher than expected The Washington housing recovery continues to exceed our expectations. Total housing units authorized by building permits averaged 31,000 (SAAR) in the fourth quarter, up from 28,000 in the third quarter. The November forecast had expected 28,300 units. The forecast variance was mostly in the single-family segment where permits averaged 19,500 units in the fourth quarter compared to our November forecast of 17,200 units. This was the strongest quarter for single-family housing since the first quarter of 2008. Multi-family permits came in at 11,500 units, slightly better than our forecast of 11,100 units. Initially the housing recovery in Washington was mostly in the multi-family segment but this is changing. Single-family as well as multi-family permits rose during 2012.

Exports are growing thanks to Boeing Export growth weakened but remained positive in 2012. Total Washington exports rose 16.6% in 2012, down slightly from the 21.4% growth rate in 2011. The continued strong growth in exports was mostly due to acceleration in exports of transportation equipment (mostly aircraft) from a 17.4% growth rate in 2011 to 36.0% in 2012. Outside of transportation equipment, exports struggled to maintain positive growth, slowing from 24.6% in 2011 to just 1.7% in 2012.

Seattle inflation has slowed Inflation in the Seattle metropolitan area has cooled substantially since last summer. As of February 2013, the all items Seattle CPI was up just 1.8% over the previous February, down from 2.7% inflation last June. Seattle core inflation in February 2013 was also 1.8%, down from 3.0% eight months earlier. The main reason for the reduction in Seattle area inflation was shelter costs which rose 3.9% YOY in June 2012 but only 2.1% in February 2013.

Washington is outperforming the U.S. in income growth In late March, after our forecast adoption, the U.S. Department of Commerce, Bureau of Economic Analysis (BEA) released preliminary state personal income estimates for the full year of 2012. According to these estimates, Washington personal income rose to \$313.2 billion in 2012 from \$299.7 billion in 2011. The 4.5% increase in Washington personal income was the 4th

Executive Summary 3

largest among the states and District of Columbia, and substantially exceeded the 3.5% increase for the U.S. as a whole. Our well above average performance in 2012 was largely due to our two marquee industries, aerospace and software.

#### **Revenue Forecast**

The March economic forecast was weaker overall than November's but had a stronger forecast of housing permits and sales Differences between the March and November forecasts stemmed from the differences between November's assumptions of federal budget decisions and the current state of those decisions. The November forecast assumed the federal payroll tax cuts would be maintained, but instead they were eliminated. The forecast had also assumed that the spending cuts known as the "sequester" would largely be avoided, but now they are forecasted to go into effect through June. Although state revenue collections have been coming in above the November forecasts, the impacts of the payroll tax increase and spending cuts have reduced forecasted collections for the rest of the current biennium and a weaker outlook going forward has reduced the forecast for the next two biennia as well. The negative impacts, however, were lessened by an improved outlook for housing construction and sales, which increased forecasted revenue from those sectors.

GF-S forecast change by biennium (millions): 11-13: +\$59 13-15: -\$19 15-17: -\$49 As of March 10<sup>th</sup>, revenue collections were \$125.5 million ahead of the November 2012 forecast. For the remainder of the current biennium, \$66.7 million was subtracted from the forecast, for a total increase of \$58.8 million. Changes to the economic forecast resulted in reductions of \$19.3 million in forecasted revenue in the 2013-15 biennium and \$48.7 million in the 2015-17 biennium. With these revisions, GF-S revenue for the 2011-13 biennium is forecasted to total \$30,536.2 million and revenues for the 2013-15 and 2015-17 biennia are forecasted at \$32,541.4 million and \$35,306.2 million respectively.

Executive Summary 4

## Chapter 1: U.S. Economy - Current Conditions and Forecast

- The national economy continues to move forward at a modest pace. The economy's fundamentals continue to improve and private-sector growth has firmed. There remain several headwinds that could push the U.S. back into recession.
- Federal fiscal policy remains at the forefront of economic uncertainty. On March 1, 2013, automatic sequester spending cuts kicked, potentially leading to \$1.2 trillion in spending reductions over nine years.
- The sovereign debt crisis in Europe remains a significant threat to the U.S. economy. If this leads to a financial crisis, the U.S. economy could enter a new recession as well. Slowing Asian economies and threats to world oil supplies also pose risks to the U.S. economic recovery.
- The U.S. economy grew at a dismal 0.4% annualized rate (SAAR) in the fourth quarter of 2012. However, payroll employment has picked up and continues to chip away at unemployment.
- Consumer attitudes appear to be firming after the latest setback caused by fiscal policy missteps. Consumer spending remains subdued.
- The housing sector has continued to show further signs of improvement. Housing starts have strengthened, boosted by low inventory. Home prices continue to appreciate, which is critical for the recovery in housing.
- The manufacturing sector, which had been a bright spot in the recovery, has lost momentum. While this sector is not dragging down the recovery, it is no longer substantially adding to growth either.
- The housing sector remains the most significant upside risk. Despite the relatively small change in the economic forecast, downside uncertainty remains elevated.

#### **Current Conditions**

The economic recovery remains modest

The national economy continues to move forward at a modest pace with weak growth and high unemployment. The economy's fundamentals continue to improve and private-sector growth has firmed. Economic activity since the November forecast has generally been in line with the baseline scenario. Despite the pause in growth at the end of last year, the recovery has continued, although there remain several headwinds that could push the U.S. back into recession. We expect the economy to

continue to grow and gradually pick up momentum. The housing recovery is gathering momentum across all dimensions. Consumer confidence remains fragile, but the trend appears positive. Policy headwinds from the nation's capital and recent global events have kept uncertainty elevated, however, and have acted as a drag on growth. The level of downside uncertainty in the baseline remains high.

A "fiscal cliff" deal was signed that cut spending and increased taxes

Since the November forecast was adopted, a bill was passed to avoid most of the tax increases and budget cuts that made up the "fiscal cliff." However, there was significant fiscal tightening as the payroll tax on employee wages rose (from 4.2% to 6.2%) and the top income tax rate for households with taxable income over \$450,000 per year was increased from 35% to 39.6%. The November forecast had assumed the tax increases would be delayed and that the 2% payroll tax cut would be extended for 2013 and then phased out over several years. In total, the November forecast assumed \$66 billion in fiscal tightening for 2013 while the actual bill resulted in a tightening of \$148 billion. The payroll tax cut is expected to reduce GDP growth this year by 0.4 percentage points while total fiscal tightening initiated in 2013 is expected to subtract 0.7 percentage points from GDP growth.

Monetary policy will remain accommodative

Unlike fiscal policy, monetary policy remains accommodative. The present monetary policy stance of aggressive monetary expansion until the labor market outlook improves substantially is likely to remain in place. At the Federal Open Market Committee (FOMC) meeting on March 19-20, the Federal Reserve announced no policy change despite acknowledging that the economy has improved. The committee decided to keep its purchases of mortgage-backed securities and Treasury bonds unchanged at \$40 billion per month and \$45 billion per month respectively. The Fed also reiterated its pledge to keep the fed funds rate near 0% as long as the unemployment rate is above 6.5% and inflation below 2.5%. However, it continues to look as if the economy is caught in a classic "liquidity trap" where monetary policy playing a lone hand has lost its effectiveness. Interest rates are already at a historically low level and lowering the rates further is unlikely to solve the major problems affecting the economy. In such conditions, for macroeconomic policy to be effective, both monetary and fiscal policies need to be working in tandem. That is not the case, which compelled the Federal Reserve Board to state that fiscal policy has become somewhat more restrictive, something it usually refrains from.

The crisis in Europe remains a significant threat to the recovery

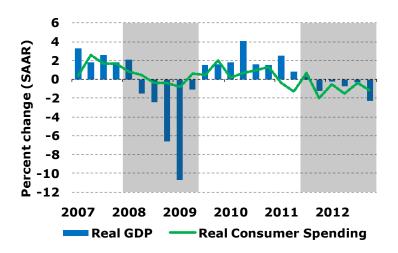

In addition to the threat of policy miscalculations domestically, the sovereign debt crisis in Europe remains a significant threat to the U.S. economy. Europe has entered into another recession, further complicating the debt troubles faced by many countries. The unemployment rate has continued to increase for the past two years and again hit a record high of 11.9 percent in January.

The youth unemployment situation (those under the age of 25) has been even worse and is now at 24.2 percent. Growth in gross domestic product in the 17 country Eurozone has been negative for five consecutive quarters, fueled in part by weakness in consumer spending (see Figure 1.1). Consumer confidence in the Eurozone continues to deteriorate and adds to concerns that the region is likely heading for continued contraction. France and Germany, the two largest economies in the Eurozone, had the largest drops in confidence in March. Struggling southern periphery countries continue to struggle as well. The combination of negative economic growth and rising borrowing costs puts countries like Greece, Spain and Italy at increased risk of default.

Cyprus was the latest country to highlight the weakness in Europe Cyprus, the latest country to narrowly avoid default, had to hold emergency talks with European lenders to secure a financial bailout needed to keep the country's banks from collapsing. The fallout shook confidence in other European countries where banks are in a precarious position. An escalation of the crisis could cause panic financial markets and further weaken economic growth. If the financial sector deteriorates, this would ultimately have a negative impact on markets for goods and services and the U.S. economy could enter a new recession as well. Apart from potentially causing financial markets to seize up, the European sovereign debt problems threaten U.S. exports in three ways - by weakening European growth, by strengthening the dollar via a "flight to safety" and by negatively affecting Asian economies.

Figure 1.1: Eurozone Real GDP and Consumer Spending Growth

The Eurozone remains in a prolonged recession

Source: Eurostat, Centre for Economic Policy Research; data through 2012 Q4

The weakness in Europe has contributed to a slowdown in Asia

The weakness in Europe has contributed to a slowdown in Asia as well. In particular, we continue to expect modest growth in China due to their reliance on exports for growth. Chinese GDP growth had declined for seven consecutive quarters until the fourth quarter reading of 7.9% growth year-over-year, up from 7.4% in the third quarter. While this eased concerns that China was in a downward spiral, recent news suggests that growth may again be receding while inflation is rising. Weak external demand has taken a toll on the Chinese economy as have political tensions between China and Japan. Policy leaders have also had to manage a real estate bubble which could cause tighter controls by the central bank. The once-a-decade leadership change in China has recently taken place, but so far it is unclear what new policy positions the new leaders will take and what impacts this will have on the Chinese economy.

GDP growth in the fourth quarter was dismal The U.S. economy grew at a dismal 0.4% annualized rate (SAAR) in the fourth guarter of 2012 according to the Bureau of Economic Analysis. This was revised up from 0.1% growth in the previous estimate and is down from the third quarter's 3.1% growth. The weak growth was driven by sharp declines in inventory accumulation and federal defense spending while exports also fell significantly. Nonresidential fixed investment, imports, and consumer spending growth all accelerated. Going forward, the inventory cycle, which reduced GDP by 1.5 percentage points in the fourth quarter, should cease to be a drag on overall GDP growth. Federal defense spending, which fell at a 22.1% rate, reduced GDP by 1.2 percentage points as cuts came from non-military personnel, suggesting the military has been aggressively preparing for sequestration. Consumer spending, which grew at a 1.8% rate, was lifted at the end of 2012 as businesses rushed to pay dividends and bonuses ahead of anticipated tax increases. Consumer spending growth is expected to remain weak in the current guarter due to the elimination of the 2% payroll tax cut. Business fixed invested turned positive, growing at a 13.2% rate after declining at a 1.8% rate in the third guarter. Residential fixed investment increased at a 17.6% rate as the housing recovery continued to unfold.

Real disposable income has been volatile due to policy changes Rising personal income is a key for confidence to rise and personal consumption expenditures to improve. Recently, income growth has been volatile due to government policy changes. Real disposable personal income increased 0.7% in February after plummeting 4.0% in January and spiking 2.7% in December. Dividend and bonus payment changes due to anticipated and realized tax changes have been responsible for much of this volatility and accounted for the large growth in income in February. Also dragging down growth the past two months has been the elimination of the 2% payroll tax cut. Excluding all the special effects and the estimated impact of Hurricane Sandy in November, nominal personal income growth has averaged about 0.4% the past four months. Even with the drops in income,

spending growth remains moderate, causing the saving rate to plummet since December. In February, the saving rate was 2.6%, up from 2.2% in January but down from 6.4% in December. Wage and salary disbursements grew 0.6%, reversing the 0.6% decline in January. Government transfers grew 0.4% in February, up from 0.2%. Income from dividends and interest, which is responsible for the recent volatility, increased 3.6% in February after dropping 17.2% in January.

Employment growth has been better than expected Employment growth has been better than expected in the November forecast. Nonfarm payroll employment increased by 236,000 in February, although January and December figures were revised down by a combined 15,000 jobs. Private sector payrolls added 246,000 while government payrolls fell 10,000. Private sector job gains have now been above 200,000 for four of the past five months. Payroll gains were spread across a wide swath of both goods-producing and services-providing industries in February. Construction employment gained 48,000, boosted by the ongoing recovery in the housing market while manufacturing employment gained 14,000 despite weaker orders for producers. The private services industries gained 179,000, with professional and business services leading the way, gaining 73,000 jobs. While job gains have continued to trend upward, job growth has been much slower than is typical for a recovery. Sixty-three months after the start of the last recession, we are still 2.9 million jobs below pre-recession employment.

The labor market is improving The recent level of job growth is starting to become sufficient enough to absorb some unemployed workers as well as welcome some new entrants. The February unemployment rate fell to 7.7% from 7.9% due to a combination of a decline in the labor force and rising employment. Joblessness, however, remains high with nearly 12.0 million people unemployed by the traditional measure. The most comprehensive measure of underemployment, which includes those marginally attached to the labor force, plus total employed part time for economic reasons, declined as well, from 14.4% to 14.3% in February. Those out of work for a long time are still having a tough time getting back into the workforce. The number of Americans unemployed for six months or longer went up by 89,000 in February to a total of 4.8 million. The average duration of unemployment rose as well to 36.9 weeks in February, up from 35.3 weeks in January. The labor-force participation rate, which measures the percentage of working-age people in the workforce, dropped to 63.5%, the lowest in 30 years. The number of seasonally adjusted new unemployment insurance claims points to a slowly recovering labor market as well. Despite increasing in the latest week, initial claims remain on a downward trend and are almost back to pre-recession levels (see Figure 1.2). For the week ending March 23<sup>rd</sup>, four week moving average of initial claims increased by 2,500 to 343,500. The latest reading is down 5.6% from a year ago and down 47.9% since the peak in 2009. In the five year period prior to the

2007-09 recession, the number of new claims for unemployment insurance averaged 343,200, just below the latest March reading. The average workweek increased slightly and appears to have stabilized after falling in the second half of last year indicating employers are confident enough to increase hours and add to payrolls.

Figure 1.2: Initial Claims for Unemployment Insurance, 4-Week Moving Average, Seasonally Adjusted

Initial claims for unemploy-ment insurance are trending down

Source: U.S. Department of Labor; data through March 23, 2013

Consumer confidence is starting to improve after faltering after November After years of pessimism following the 2007-09 recession, consumers finally started feeling optimistic in the second half of last year, pushing confidence measures to post-recession highs. However, political scuffling after the November elections surrounding the fiscal cliff again caused consumer attitudes to fall. The failure to come up a deal to avoid the automatic sequestration sending cuts further suppressed confidence, as did rising gasoline prices. Also, the removal of the 2% payroll tax cut is likely to have a dampening impact as consumers continue to see smaller paychecks. Despite this, consumer attitudes appear to be slowly, although sporadically, moving up again. The labor market recovery has accelerated recently and equity markets are hitting all-time highs. The housing market recovery has also continued and people are feeling more confident about the value of their home, typically their largest asset. Also, the initial impact to confidence due to sequestration has worn off and a majority of consumers have felt few or no adverse effects to date. The most recent reading of consumer sentiment from the University of Michigan shows that confidence increased 1.0 point in March after increasing 3.8 points in February. The conference board reading, however, dropped 8.3 points in March after increasing 9.6 points in February. The decline was led by souring perceptions of future conditions. In total, it appears economic fundamentals are continuing to firm causing consumer attitudes to trend upward, although policy missteps have periodically dampened this trend.

Business confidence has improved since the lows late last year The National Federation of Independent Business (NFIB) small business optimism index increased to 90.8 in February from 88.9 in January. While an improvement, the number is still consistent with recessionary readings and lower than earlier in the year. The index is still around the levels observed in late 2010, suggesting that the economy has not made much progress from a small business perspective. However, the survey has reflected some positive signs recently. Of the ten components of the index, eight improved and only one fell. There were large gains in capital spending and inventory investment plans, although both readings remain low by historical standards. On the other hand, outlook for business conditions remains low and actual sales and earnings continue to decline. While the primary reason for a negative outlook on expansion remains poor economic conditions, the percent of owners viewing the current period as a bad time to expand due to the political climate remains elevated at 15%.

Lending standards have eased Credit market conditions have improved since the meltdown that followed the collapse of Lehman Brothers in September 2008. The Federal Reserve Board's January survey of senior loan officers shows a continuation of gradual easing of lending standards. Banks modestly loosened lending standards to both large and small businesses and demand for these loans was modestly stronger as well. Banks also loosened standards at a faster rate on commercial real estate loans, prime mortgages (i.e., traditional mortgages to borrowers with high credit standards), and consumer auto loans. Standards on consumer credit card loans were also loosened slightly, but at the slowest rate in almost three years. Demand for traditional mortgage loans was also stronger, consistent with a strengthening housing market and record low interest rates.

Oil prices are declining

After increasing early in the year and finally peaking at over \$117 per barrel in February, oil prices have softened to \$107 per barrel for Brent crude oil. Gasoline prices have followed, peaking at \$3.85 per gallon (for all grades) in late February before finally retreating to \$3.75 per gallon in late March. Gas prices are now 5.7% lower than a year ago. U.S. and Canadian oil production will rise as Iranian output remains depressed due to economic sanctions. Uncertainty over Iran's response to those sanctions is likely to keep oil and gasoline prices volatile for the near future. Headline inflation has remained modest even as prices have been relatively volatile. Energy prices increased 5.4% in February caused by rising gasoline prices and are now up 2.3% year-overyear. Food prices moved up slightly, increasing another 0.1%, and are now up 1.6% year-over-year. The consumer price index (CPI) increased 0.7% and is now up 2.0% year-over-year in February, the highest since October 2012. Core inflation, which excludes food and energy, rose 0.2% due to rising shelter costs, although it remains up just 2.0% year-over-year in February.

The housing sector continues to improve

The housing sector has continued to show further signs of improvement. The level of activity is not yet back to normal, but it is clear that the sector has finally turned a corner. New home sales, single-family housing starts, and single-family permits have all continued trending up in recent months. Housing starts are 28% above their year-ago level after increasing another 7,000 units (SAAR) to 917,000 units (SAAR) in February. The growth in housing starts remained solid in recent months and is now just shy of the 1 million unit level last seen in mid 2008. Multi-family construction increased 4,000 (SAAR) units in February and is now 21% above year ago levels. Single-family starts increased 3,000 units (SAAR) in February, and are up 31% from a year ago. There remains a considerable level of underlying demographic demand as people have put off forming new households due to weakness in the economy. Overbuilding during the boom years also contributed to the depressed level of new starts. Now that these issues are diminishing, new homes will have to be built to meet the ever increasing demand from population growth.

The trend in home sales is improving

Existing homes sales continue to increase, providing another indication of recovery in the housing market. Sales were up 0.8% in February to 4.98 million (SAAR), the highest since November 2009 when the first-time homebuyer's credit boosted sales. Inventories increased for the first time since last spring by 9.6% to 1.94 million in February. Even with the increase, the market remains tight with just 4.7 months of supply which has contributed to recent price gains. Banks have continued to release more distressed homes on the market, but the negative effect on prices is diminishing. Shortages of homes for sale have developed in some western markets, driving the 23% year-overyear increase in median home prices in this region. Despite strength in the housing market, sales of new homes decreased in February to 411,000 (SAAR) from 431,000 (SAAR) in January. The trend, however, remains strongly positive. February's pace of sales is the second strongest since April 2010. Also, the February sales number was hampered by concerns in late 2012 of fiscal austerity, when the decision to buy these homes was made. The market for new homes remains tight as well. Even with the number of new homes available increasing in five of the last six months, the months of supply in February remains near a historic low at 4.4.

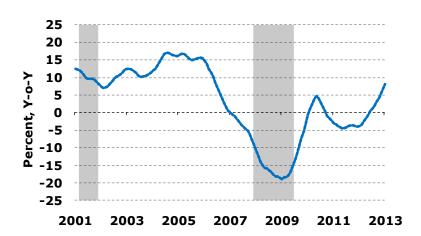

Home prices continue to rise

Home prices have continued to increase after years of decline surrounding the 2007-09 recession. This had been a major hurdle to housing market recovery. Potential buyers were reluctant to enter the market when home values were declining. Banks are also less willing to lend against depreciating collateral. According to data from CoreLogic, overall home prices increased in January by 0.6% and were up 9.7% from a year ago. Prices of distressed properties have also rebounded and are up 9.6% in January over last year. The seasonally adjusted Case-Shiller 20-city home price index increased 1.0% in January from the

previous month, the twelfth consecutive monthly increase. The index is now 8.1% above the year-ago level (see Figure 1.3). Even with the recent increase in home prices, affordability remains high due to record low mortgage rates. Price appreciation has been above expectations in recent months. Tight market conditions have outweighed downside effects of foreclosed properties hitting the market. Longer-term equilibrium will depend on how the federal government unwinds its ownership of Fannie Mae and Freddie Mac, the largest players in the secondary mortgage market.

Figure 1.3: Case Shiller Composite-20 Home Price Index, Seasonally Adjusted

Home price appreciation is accelerating

Source: S&P/Case-Shiller; data through January 2013

The manufacturing sector has lost momentum

The manufacturing sector, which had been a bright spot early in the recovery, has lost momentum. According to the Federal Reserve's latest G-17 report, manufacturing output increased 0.8% (SA) in February after falling 0.3% in January. Output growth has slowed the past twelve months after strong growth early in the recovery. Durable goods output increased 1.2% in February with strong gains in motor vehicles and parts, up 3.6%. Total manufacturing output remains 2.0% above last year while durable goods output is up 3.8%. Orders for core capital goods (nondefense capital goods excluding aircraft) declined by 2.7% in February, the largest decline in seven months. The decline followed a surge of growth of 6.7% in January. The trend remains modestly positive as businesses continue to look at expansion and modernization despite consistent headwinds. The Institute of Supply Management (ISM) Report on Business indicated that activity in the manufacturing sector slowed in March after gradually picking up steam the past two months. The ISM index declined to 51.3 from 54.2 this past month. Details were generally weak as new orders and production fell sharply, each down by more than 5 points. The employment component,

however, increased to 54.2, the third gain in the past four months. Aside from the first two months of 2013, factory production has been flat as the ISM index has hovered just above the 50 point threshold for growth. The sluggish growth in the manufacturing is likely to continue in the near term as the effects of the sequester materialize, conditions in Europe deteriorate, and uncertainty of U.S. fiscal policy drags on.

Global economic growth is expected to rebound in the first quarter Economic growth in the world's largest developed economies will accelerate this year, according to the Organization for Economic Cooperation and Development (OECD). Strength in the United States and Japan is expected to help to offset the continuing struggle in Europe. After contracting by 0.5% (SAAR) in the fourth quarter of 2012, the Group of 7 industrialized nations (G-7) is expected to grow 2.4% (SAAR) in the first guarter and 1.8% (SAAR) in the second quarter of this year. Japan, which has committed to eliminating deflation, is expected to grow 3.2% (SAAR) in the first guarter of 2013 and 2.2% (SAAR) in the second quarter. The OECD expects continued weakness in the Eurozone, with Germany returning to growth (2.3%) in the current guarter while growth in the remaining nations is slow or negative. Britain is expected to return to positive growth as well after declining 1.2% (SAAR) in the fourth guarter. Going forward, economic growth in the developing nations is expected to continue to outpace growth in the advanced economies.

#### **Forecast**

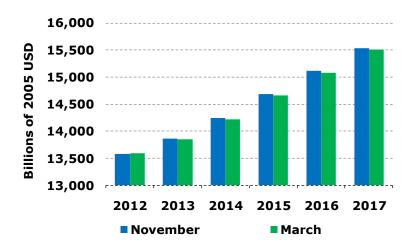

The March forecast is based on the latest Blue Chip Consensus forecast The March 2013 economic forecast was based on a modified version of Global Insight's March 2013 Control forecast for the U.S. economy. As in November, the U.S. real GDP forecast was adjusted to match the Blue Chip Consensus GDP forecasts for 2013 and 2014. We also incorporated the latest long term Blue Chip GDP forecast for 2015 through 2017. Our oil price forecast was adjusted to incorporate futures prices for both Brent crude oil and for West Texas Intermediate crude to better track world oil prices.

GDP is expected to be lower

The Blue Chip Consensus GDP forecast, our starting point each forecast cycle, now calls for real GDP growth of 1.9% in 2013 and 2.7% in 2014. Real GDP growth is down slightly from the previous forecast in 2013 and 2014 which had called for growth of 2.0% and 2.8%. Real GDP growth is expected to be 3.1% in 2015, 2.9% in 2016, and 2.8% in 2017, which is unchanged since November. Due to the lower growth in 2013 and 2014, real GDP is expected to be slightly lower throughout the forecast compared to November (see Figure 1.4). The similarity in forecasts points to a continuation of the slow growth and high unemployment scenario anticipated in the previous forecast.

Figure 1.4: Blue Chip Real GDP Forecasts

The forecast for GDP is lower than in November

Source: BEA, ERFC March 2013 forecast; historical data through 2012

The sequester could reduce spending by \$1.2 trillion over nine years

There continues to be uncertainty regarding federal fiscal policy. On March 1, automatic sequester spending cuts kicked in consisting of \$1.2 trillion in spending reductions over nine years from 2013 through 2021. This amounts to around \$1.0 trillion in cuts and around \$200 billion in interest savings. The cuts are split equally between defense and nondefense programs and are reductions in budget authority and not actual outlays. The cuts are around \$109 billion per federal fiscal year, although it could take several years for the cuts in actual spending to catch up with the reduction in budget authority. Given the lack of progress in replacing the sequester, we are now assuming that the sequester will remain in place until June 30. It will then be replaced by a mix of nondefense budget cuts and tax increases that will start in September. The remaining deficit reduction assumed in the Budget Control Act, \$912 billion plus \$216 billion in lower debt payments, will be spread over federal fiscal year 2014 through 2023 instead of 2013-2021 as in the Budget Control Act. The result of the sequester is a 0.3 percentage point reduction of GDP growth for 2013. A full-year seguester would cut another 0.2 percentage points off GDP growth for this year.

Policymakers are focusing on deficit reduction With policymakers focusing on deficit reduction, and federal fiscal tightening in the wake of the stimulus, the forecast calls for a \$113 billion reduction in the federal deficit between 2013 and 2014. We expect real defense spending to fall throughout the forecast reflecting a combination of some budget cuts and overseas contingency operations winding down. Declining federal support is also affecting state and local governments. State and local administrations appear to be relying more on spending cuts than tax increases to close budget gaps. The pace of budget tightening has eased slightly as revenues have started to improve, but municipalities remain under pressure. We expect total real government purchases to decline 2.2% this year

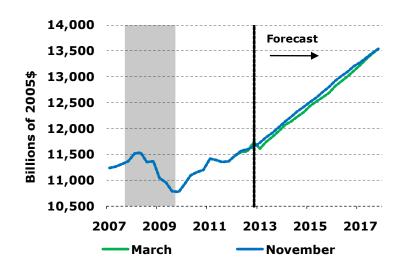

followed by declines of 0.3% in 2014, 0.4% in 2015 and 0.2% in 2016. We expect 2016 to be the trough in real government spending with slight growth of 0.2% in 2017. The decline in government spending will reduce overall GDP growth by 0.4 percentage points this year, followed by 0.1 point reductions in 2014 and 2015 before turning neutral.

The removal of the payroll tax cut reduced personal income

As a result of the fiscal cliff deal signed into law in January, which raised the top income tax rate and eliminated the payroll tax on employee wages, the March forecast for personal income has been lowered (see Figure 1.5). Growth in real personal income is now expected to decline to 1.7% in 2013 from 1.8% in 2012. The November forecast had expected growth to accelerate to 2.6% in 2013. We do expect growth in real personal to pick up in 2014 with growth reaching 3.4% as the economy continues to recover. Growth in real personal income is then expected to moderate slightly to 3.1% in 2015 and then grow 3.2% in 2016 and 3.3% in 2017.

Figure 1.5: U.S. Real Personal Income

The forecast for personal income is lower than November

Source: BEA, ERFC March 2013 forecast; historical data through 2012 Q4  $\,$ 

The oil price forecast is higher

Despite a slightly weaker forecast of growth, we expect a slightly higher oil price throughout the forecast compared to November. After working through the temporary effects on Gulf Coast production caused by Hurricane Isaac, oil prices drifted higher due to higher refinery demand. This should ease more capacity is brought online as refineries begin wind down seasonal maintenance. Oil prices are expected to decline beginning in the second half of this year and we expect the first quarter of 2013 to prove to be the peak at \$113 a barrel for Brent crude oil. We expect oil prices to decrease throughout the forecast period, with the Brent price reaching \$93 by the end of 2017. Much of this decline is due to the continued crisis in Europe and slower growth in Asia, particularly China. This will continue to weigh on

demand as global supplies increase putting downward pressure on prices. As a result we continue to expect low headline inflation this year of just 1.7%. We expect inflation to increase to 2.0% in 2014 before moderating to 1.8% in 2015 and 1.6% in 2016 and then increase slightly to 1.7% in 2017.

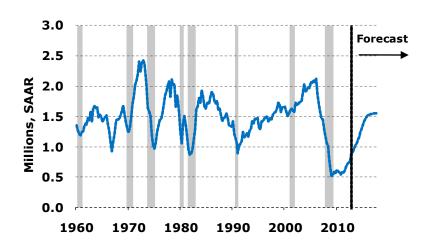

Consumer spending will not be a strong driver in the recovery As in November, a robust recovery in consumer spending is unlikely. Consumer confidence continues to remain subdued and consumers are focused on lowering their debt burdens. Recent data on car sales does indicate there is some upside risk, although this appears to be driven by replacement demand and not a return of animal spirits. Increasing home values and improving equity markets should help spending, although the elimination of the 2% payroll tax cut will remain a burden. As a result, consumer spending will not be a strong driver of growth in the recovery as is usually the case. We expect real consumer spending growth of 1.9% this year and 2.5% in 2014. We then expect growth to increase to 2.7% in 2015 and 2016 before moderating to 2.6% in 2017.

The housing sector is improving, but from a low base

The housing sector has continued to show signs of strengthening, although gains have come from a very low base. Home prices are increasing again with growth reaching double-digits in some areas. Still, there remain a significant number of distressed properties that continue to saturate markets. Continued improvement remains dependent on job growth and access to financing. Pent-up demand for housing should spur growth going

Figure 1.6: U.S. Housing Starts

Housing starts will be over 1.5 million by the end of the forecast

Source: U.S. Census Bureau, March 2013 Forecast; historical data through 2012  $\rm Q4$ 

forward. After growing an estimated 27.6% in 2012, the forecast expects robust growth in housing starts to continue over the next couple of years (see Figure 1.6). Growth in multi-family starts is expected to slow, but only because the increase of 39.0% in 2012 was unsustainable. We expect growth of 22.5% this year

before moderating to 9.8% in 2014 and 6.8% in 2015 before flattening out. The forecast calls for growth in single family starts of 29.0% this year, 26.6% in 2014 and 24.1% in 2015. The single-family segment is expected to reach 1.08 million units in 2015 from just 530,000 in 2012. The housing market will continue to improve, particularly while interest rates remain low and inventories are lean. Population remains on an upward trend and people will need a place to live. The forecast calls for total housing starts to reach 1.56 million in 2017, up from 780 thousand in 2012.

Business investment in equipment and software is slowing Growth in business investment deteriorated after being an important source of GDP growth early in the recovery. Investment in equipment and software and nonresidential construction both stalled in the third quarter of 2012 with fixed nonresidential investment declining at a 1.8% rate (SAAR). Tight credit conditions for commercial real estate, high vacancy rates, and uncertainty over the economy's direction will dampen growth and we expect nonresidential construction to decline 0.1% in 2013. Going forward, nonresidential construction is expected to rebound and become a contributor to overall growth. The forecast calls for growth in 2014 of 7.0% followed by 8.3%, 4.5% and 5.8% in 2015 through 2017. Investment in equipment and software is expected to remain positive in 2013 with growth of 6.1%. Businesses have high levels of cash and profits remain high, providing an opportunity to improve productivity by addressing replacement needs neglected during the recession. Although we do not expect to see a continuation of the robust growth early in the recovery, we do expect capital equipment to remain an important driver of GDP growth going forward. The forecast calls for equipment and software spending to grow in another 6.9% in 2014 and 5.8% in 2015. The forecast calls for growth to moderate to 4.9% in 2016 and 5.1% in 2017. We expect overall real nonresidential fixed investment is to grow 4.3% this year, 6.9% in 2014 as nonresidential construction picks up, 6.5% in 2015, and then moderate to 4.8% and 5.3% in 2016 and 2017.

Export growth has slowed

Export growth remains weak and is not expected to be a significant contributor to U.S. GDP growth going forward. We expect weak foreign demand for U.S. goods and services as economic growth in major U.S. trading partners remains slow. The crisis in Europe has pushed the Eurozone back into recession and has contributed to a slowdown in growth in other important U.S. trading partners as well. GDP growth in major U.S. export markets is forecasted to grow 2.7% this year after growing 2.6% in 2012. GDP growth for these countries is expected to increase beginning in 2014 as sovereign debt problems are resolved and Europe ceases to be a significant drag. The forecast calls for growth in these counties to improve to 3.5% in 2014, 3.6% in 2015, and 3.7% in 2016 before moderating to 3.5% in 2017. Further deterioration of the situation in Europe remains a significant risk and would adversely affect trade in multiple ways.

First, weaker demand in Europe would directly hurt our exports. Second, a stronger dollar relative to the Euro would make U.S. produced goods and services less competitive, further hurting exports and boosting imports. Finally, weaker growth in Europe will reduce Chinese exports, in turn reducing Chinese economic growth. This will further dampen U.S. exports to China, which is our largest export market outside of North America. The Blue Chip Consensus Forecast expects real GDP growth in China to be 8.1% for both 2013 and 2014, an improvement over 2012's 7.8% rate but not enough to generate strong export growth. We expect real U.S. export growth to slow to 3.1% this year, down from 3.3% in 2012 and 6.7% in 2011. We do expect gradual improvement in exports throughout the forecast, with growth reaching 6.4% by 2016. Export growth is largely offset by increased imports, however, and is not expected to add to GDP in the near term. Net exports are not expected to be a significant contributor to real GDP growth until 2016 when they are expected to add 0.3 percentage points to growth for that year and for 2017.

Unemployment remains elevated, but will be under 6% by the end of the forecast The outlook for payroll employment has been lowered compared to the November forecast. Growth in payrolls was 1.6% last year compared to 1.8% forecasted in November. We also expect weaker growth in the near term of 1.8%, 1.9%, and 2.0% in 2013 through 2015. The November forecast expected growth of 2.1%, 2.0%, and 2.1% over that time period. Going forward, the level of employment in the forecast is lower than the previous forecast reaching a difference of 19,000 fewer jobs by 2015. We expect the U.S. economy to add about 180,000 jobs per month through the end of this year, gradually picking up to about 210,000 per month in 2015. By the third quarter of 2014 we expect to have gained 8.8 million jobs since the recession trough in 2010, making up all of the job losses since the beginning of the Great Recession. As a result, we expect an unemployment rate of 7.6% for 2013, gradually falling to 5.9% in 2017.

## **Forecast by Fiscal Year**

FY 2013 GDP growth will be weak Real GDP grew in the fourth quarter by 0.4% (SAAR), down sharply from 3.1% growth in the third quarter. Despite the pause in growth, the economy is still moving forward at a slow pace, facing headwinds both domestically and internationally. Real GDP is forecast to grow 1.9% in FY 2013, down from 2.0% in FY 2012. Going forward, growth is forecasted to increase to 2.3% in FY 2014, 2.9% in FY 2015, and 3.1% in FY 2016 before moderating to 2.8% in FY 2017.

Consumer spending will remain subdued The lackluster job market, worry over the fiscal cliff and the ongoing situation in Europe have caused the consumer to be reluctant to spend money. Consumer spending is not expected to be a strong driver in this recovery. Consumer confidence again looks tentative after initially increasing since the November

forecast. The current forecast expects real consumer spending growth in FY 2013 of 1.8%, down from the 2.0% growth in FY 2012. Growth is expected to pick up to 2.2% FY 2014, 2.6% in FY 2015, and 2.7% in FY 2016 before dropping back to 2.6% in FY 2017.

The housing market has stabilized

The housing market has begun growing again after experiencing the worst downturn in the post-war period. The forecast calls for an increase in housing starts in FY 2013 to 890,000 units, from 686,000 in FY 2012. The housing market is expected to continue to improve as the economy adds jobs. Housing starts are expected to increase in each year of the forecast period, rising to 1.55 million units by FY 2017.

Business investment growth will slow Business investment continued its upswing in FY 2012, although we do expect growth to slow this fiscal year. Uncertainty over the economy's direction and federal fiscal policy will cause companies to be cautious in deciding when to expand. The forecast calls for real nonresidential fixed investment to increase by 4.0% this fiscal year, down from the 10.6% growth in FY 2012. We expect growth to increase to 5.9% in FY 2014 and 7.1% in FY 2015 before moderating to 5.5% and 5.1% in FY 2016 and FY 2017. Business investment growth has been led by investment in equipment and software during the recovery, although it too has slowed recently. It is expected to increase 4.6% this fiscal year, down from 10.5% in FY 2012. We expect growth of 7.3%, 6.1%, 5.4%, and 5.0% in FY 2014 through FY 2017. Investment in non-residential construction has lagged in the recovery, although FY 2012 did experience the first growth in this sector since FY 2007 at 10.9%. We expect growth to falter this fiscal year and next at just 2.5% and 2.3%. Going forward, the forecast calls for growth of 9.5%, 5.7%, and 5.5% in FY 2015 through FY 2017.

Exports will reduce the trade deficit slightly

Although export growth is expected to be slower than in the September forecast, it is still expected to slightly outpace import growth this fiscal year, adding 0.2 percentage points to overall GDP growth. Going forward, net exports' contribution to GDP is expected to be slightly negative until FY 2016. Export growth this fiscal year and in the outer years of the forecast period will help to shrink the trade deficit from \$567 billion in FY 2012 to \$455 billion by FY 2017.

Employment growth will be weak

Employment growth in FY 2012 was 1.6%, up sharply from the previous year but still lackluster especially for periods of economic recovery. Growth in FY 2013 and FY 2014 is expected to match that of FY 2012. We expect job growth to pick up to 1.7% in FY 2015 and 1.8% in FY 2016 before moderating back to 1.6% in FY 2017. Because of the sluggish recovery in the labor market, the unemployment rate is expected to fall gradually, from 7.8% in FY 2013, to 6.1% in FY 2017.

Inflation remains moderate

High unemployment and excess capacity in the economy are helping to keep inflation subdued. The consumer price index is expected to rise by 1.8% in FY 2013 and FY 2014 before increasing slightly to a 1.9% increase in FY 2015. We then expect inflation to moderate further in FY 2016 and FY 2017 increasing 1.7%. Given geopolitical tensions with Iran, one risk to our inflation forecast is a spike in oil prices caused by supply interruptions. Our baseline oil price forecast has prices falling steadily throughout the forecast reaching \$84.50 per barrel in FY 2017 from \$91.70 in FY 2013.

#### **Risks to the Forecast**

The level of uncertainty remains high

The level of uncertainty in the baseline is high. Downside risks are still elevated, and considerably higher than upside risks. Our view of the risks is essentially unchanged since November. There remain many significant risks to the forecast on the downside, but the housing sector remains a significant upside risk.

#### **Downside Risks (35% Probability)**

Sovereign debt contagion...

Risks associated with the sovereign debt crisis in Europe remain high. Europe experiences a severe recession and continued austerity measures increase the financial strains in Europe's southern periphery countries. Funding for Greece dries up and they leave the Eurozone in the second half of 2013. The Greek exit puts intensifying pressure on Spain and Italy. Financial markets panic, stock prices plunge and the safe haven U.S. dollar soars. A series of sovereign debt defaults would trigger a European banking crisis which in turn would affect U.S. banks. Credit would tighten and economic activity would shrink, pushing the U.S. back into another recession.

Policy missteps Partisan brinkmanship leads to a stalemate in Congress and the automatic sequester spending cuts remain in place throughout 2013. The inability of policymakers to resolve the issue weighs on private-sector confidence and economic activity slows. Facing a weak economy, policymakers decide on austerity and cut discretionary spending in 2014, further reducing growth.

Slowdown in Asia Although the chances of a hard landing in China (growth less than 5%) continues to recede, slowing economies in the Eurozone could lead to slower growth in China and other Asian countries. In turn, this could reduce U.S. exports and GDP growth.

Turmoil in oil-producing countries

Turmoil in oil-producing countries or oil transit routes. While Iranian talk of a blockade of the Strait of Hormuz has died down, there is an increased risk of a military strike to address Iran's emerging nuclear capabilities. A major disruption would result in sharply higher oil prices.

North Korea Tensions in North Korea erupt that lead to military action by the

**United States** 

Unexpected events

Unexpected events – natural disasters, political upheaval, etc.

#### **Upside Risks (15% Probability)**

Housing improves faster than expected The housing sector improves faster than anticipated. Home prices continue to increase and buyers move off the fence helped by low interest rates. Homebuilders respond and housing starts increase, leading to more hiring.

Pent-up demand is unleashed

Pent-up demand could boost consumer spending after years of economizing fueled by a rebound in confidence.

Jobs

Hiring could pick up, triggering a virtuous cycle of jobs, income, spending and yet more jobs.

No European contagion and European banking crisis averted There are no exits from the Eurozone. Member countries take decisive steps towards a banking and fiscal union that stabilizes markets. The European Central Bank develops a credible plan to tackle sovereign debt issues and prevent a financial meltdown. This in turn leads to rising stock markets in the U.S. and internationally, boosting consumer confidence and consumption.

U.S. policymakers come to an agreement Government policymakers become supportive instead of obstructive.

## **U.S. Economic Forecast Summary**

Forecast 2013 to 2017

Forecast 2013 to 2017

# Chapter 2: Washington Economy – Current Conditions and Forecast

- As expected in November, the Washington economy continues to expand at a moderate pace.
- Washington employment growth is on target.
- Washington disposable income is lower due to the "Fiscal Cliff" deal and sequestration.
- Washington housing construction is recovering faster than expected in November.
- Home prices are rising.
- Except for transportation equipment, Washington exports have weakened.
- Inflation in the Seattle area has slowed.
- We expect the Washington economy to continue to outperform the U.S. economy by a narrow margin.

#### **Current Conditions**

Recent developments have been mixed Recent developments at the state level have been mixed relative to our November forecast. Washington employment has been very close to our forecast but federal fiscal policy has been more restrictive than expected, resulting in lower Washington disposable personal income. On the plus side, the Washington housing market is rebounding faster than expected in the November forecast.

Job growth has been on target Washington employment increased by 18,900 jobs in the four months since the November forecast was adopted, which was slightly more than 17,600 expected. As expected, manufacturing employment growth remained strong, adding 3,200 jobs in the last four months (the forecast expected only 1,500 jobs). Construction employment growth has now turned positive. The construction sector added 2,400 jobs in November, December, January, and February (the forecast was for an increase of 1,400). Government employment turned slightly positive with a gain of 1,100 jobs during the last four months compared to the

forecasted decline of 200. However, private service providers added 12,000 jobs which was less than the forecast of 14,600 net new jobs.

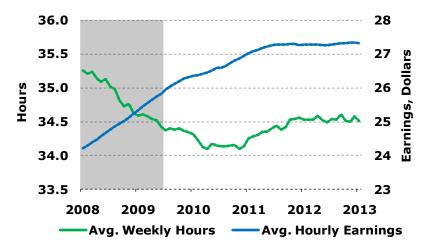

New data show lower historical employment In addition to the four months of new employment data, we also have another quarter of Quarterly Census of Payrolls and Employment (QCEW) data. The new QCEW data and other revisions lowered the level of total employment in October 2012 by 9,000. The net effect of the downward revisions to history through October and slightly stronger than expected growth since October is an estimate of February employment that is 7,800 (0.3%) lower than expected in the November forecast.

Hours and earnings have stalled

While the payroll data show continued growth in the number of jobs, the hours and earnings data have been disappointing. The twelve month moving average of average weekly hours worked in the private sector did increase from a recessionary low of 34.1 to 34.5 in October 2011 but has shown no growth since then. Average weekly hours are still 2.1% lower than they were in 2007. Private sector average hourly earnings have also leveled off. The twelve month moving average of average hourly earnings rose throughout the recession but stopped growing in mid-2011 (see Figure 2.1). The lack of growth in either average hours worked or average hourly earnings means that the average weekly paycheck is not growing.

Average weekly hours and average hourly earnings are both flat

Figure 2.1: Private Sectors Hours and Earnings, 12-Month-Moving-Average, Seasonally Adjusted

Source: U.S. Bureau of Labor Statistics; data through January 2013

Initial claims for unemployment insurance are still trending down Washington's initial claims for unemployment insurance are pointing to continued, but moderate job growth. The four-week moving average of initial claims edged up in the week ending March 23 to 9,086 from 8,985 the previous week. Despite the slight uptick, claims are as low now as they were in January 2008, near the beginning of the recession and well before the

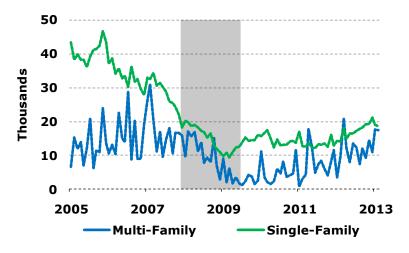

Lehman collapse. The four-week moving average is now 45% below the peak reached in March 2009 but still 26% above the pre-recession minimum.

Housing permits continue to exceed expectations

First quarter housing construction got off to a strong start according to the permit data (see Figure 2.2). Single-family permits in January and February averaged 17,500 units (SAAR) which is weaker than the 19,500 we expected in the March forecast. However, multi-family permits averaged 17,500 (see Figure 2) in the first two months of the year which is much stronger than the 14,100 we had expected in the March forecast. Total units authorized averaged 36,300 (SAAR) in the two month period compared to our forecast of 33,700 for the quarter.

First quarter permits off to a strong start

Figure 2.2: Washington Housing Units Authorized by Building Permits, SAAR

Source: U.S. Census Bureau; data through February 2013

Seattle area home prices are up 8.7% over the year Regional home prices are also on the upswing. According to the S&P/Case-Shiller Home Price Indices through January 2013, seasonally adjusted Seattle area home prices have risen in ten of the last eleven months and, as of January, are now 8.7% higher than in the previous January. Prior to the recent upturn, Seattle home prices had not registered a year-over-year gain since December 2007. Foreclosures continue to put downward pressure on home prices but demographics and record affordability are working in the opposite direction. Even with the recent gains, Seattle area home prices are 24.3% lower than their 2007 peak.

Residential construction gains are partially offset...

Contract data for new construction projects give an indication of the level of activity roughly six months in the future. Residential contracts have been trending higher since early 2012, consistent with the housing permit data. As of February 2013, the threemonth moving average of residential contract square footage was up 100% compared to the March 2009 trough. This growth,

... by weak nonresidential construction however, is off a depressed level and square footage under contract is still down 55% since the height of the housing boom in late 2005. Nonresidential construction is a different story. Nonresidential construction remained at or near its all-time lows throughout 2012. However, nonresidential contracts jumped in early in 2013, signaling that this sector may be finally turning around. Contract data averaged 14,500 square feet (SAAR) in January and February compared to just 11,100 square feet for all of 2012.

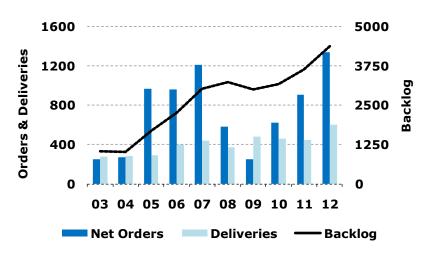

Manufacturing is slowing

The manufacturing sector weakened in February but continues to indicate growth. The Institute of Supply Management - Western Washington Index (ISM-WW), which measures strength in the manufacturing sector declined to 56.3 in February from 60.2 in January (above 50 indicates positive growth). The last time the Western Washington index was below 50 was in July 2009.

Aerospace employment has peaked Boeing built up a huge backlog of orders in 2005, 2006, and 2007. This enabled Boeing to ride out the recession with only minimal production and job cuts. Worldwide air traffic, both passenger and cargo, recovered surprisingly quickly from the recession. As a result, Boeing was able to add to its backlog in 2010, and 2011. In 2012 Boeing delivered a record 601 planes and was still able to again add to its backlog with 1,388 net new orders (See Figure 2.3). The backlog as of the end of 2012 was 4,144 planes representing more than seven years of production. From the employment trough in May 2010 through December 2012, the aerospace sector added 16,800 jobs, surpassing the previous peak by 10,800 jobs. That will probably prove to be the peak for this cycle. Boeing has announced that it plans to reduce employment by 2,000 to 2,300 this year and aerospace employment has already declined nearly 500 in January and February.

Figure 2.3: Boeing Orders, Deliveries, and Backlog

Boeing backlog is 7 years' worth of production

Source: The Boeing Company; data through December 2012

The trend is still positive in light vehicle sales Washington new car sales slowed in February but remained strong. New vehicle registrations in February were 267,600, down from January's 274,200 but over 20% higher than in February 2012. Washington car sales have now recovered nearly all the ground lost during the recession. The average rate so far in 2013 is 63% over the average in 2009 and only 6.6% lower than sales in 2006 which was the pre-recession peak. Consumers put off replacing vehicles during the recession and pent-up demand is likely driving the rebound in vehicle sales.

Exports are growing thanks to Boeing

Export growth weakened but remained positive in 2012. Total Washington exports rose 16.6% in 2012, down slightly from the 21.4% growth rate in 2011. The continued strong growth in exports was mostly due to acceleration in exports of transportation equipment (mostly aircraft) from a 17.4% growth rate in 2011 to 36.0% in 2012. Outside of transportation equipment, exports struggled to maintain positive growth, slowing from 24.6% in 2011 to just 1.7% in 2012.

Washington is outperforming the U.S. in income growth In late March, after our forecast adoption, the U.S. Department of Commerce, Bureau of Economic Analysis (BEA) released preliminary state personal income estimates for the full year of 2012. According to these estimates, Washington personal income rose to \$313.2 billion in 2012 from \$299.7 billion in 2011. The 4.5% increase in Washington personal income was the 4th largest among the states and District of Columbia, and substantially exceeded the 3.5% increase for the U.S. as a whole. Our well above average performance in 2012 was largely due to our two marquee industries. Earnings in the information sector (which includes software) rose 11.5% compared to 4.6% nationally and earnings in the durable goods sector (which includes aerospace) rose 7.2% compared to 6.6% for the nation. The other sector that significantly outperformed was retail trade where earnings rose 10.0% in Washington compared to 5.1% for the United States. Net earnings (wages, benefits, and proprietors' income less contributions for government social insurance plus an adjustment to convert earnings by place-ofwork to a place-of-residence basis) rose 4.5% in 2012 and income from dividends, interest, and rent jumped 5.5%, but transfer receipts increased only 2.6%. Growth in transfer receipts was held back by a 26.1% decline in state unemployment insurance benefits. Other transfer payments were up 4.5%. The preliminary 2011 personal income estimate of \$313.2 billion was \$0.9 billion (0.3%) lower than the \$314.1 billion predicted in the March forecast.

Seattle inflation has slowed Inflation in the Seattle metropolitan area has cooled substantially since last summer. As of February 2013, the all items Seattle CPI was up just 1.8% over the previous February, down from 2.7% inflation last June. Seattle core inflation in February 2013 was

also 1.8%, down from 3.0% eight months earlier. The main reason for the reduction in Seattle area inflation was shelter costs which rose 3.9% YOY in June 2012 but only 2.1% in February 2013.

#### **Washington State Forecast**

The revisions to the forecast were small

The Washington State forecast is based on a new national forecast that is very similar to the forecast adopted in November. As a result, the revisions to the state forecast were also minimal. There are two important changes to the national forecast that feed through to the state forecast. First, federal fiscal policy is more restrictive than assumed in the November forecast. The higher taxes and reduced spending result in lower disposable personal income in Washington. Second, oil prices unexpectedly spike higher in the first quarter of 2013. Oil prices remain higher through the forecast but also fall at a faster rate than expected in November. The new oil price forecast adds to national and regional inflation in early 2013 but reduces inflation during the remainder of the forecast.

Washington personal income is weaker due to tighter federal fiscal policy Our November economic forecast for Washington is slightly weaker than the forecast adopted in November due to the lower personal income forecast resulting from the greater than expected fiscal tightening in 2013 as well as a downward revision to the historical estimates of Washington payroll employment. Partially offsetting these negative factors is a stronger than expected housing recovery. As in November, we expect Washington job and income growth to gradually improve throughout the forecast. Housing construction, as measured by building permits, has clearly turned the corner and will continue to improve. The aerospace expansion has probably peaked and will be a slight drag on growth in coming years. We continue to expect the state of Washington to outperform the U.S. economy, however the recovery will continue to be slow by historical standards and unemployment will decline only gradually.

## **Washington Payroll Employment**

There were no major changes in the employment forecast Our forecast for Washington employment is very similar to the forecast adopted in November. As in November, we expect flat aerospace employment in the first half of this year with a gradual decline beginning in mid-2013. On the other hand, construction employment growth is expected to accelerate over the next three years, tapering off in 2016 and 2017. While we believe we are at or near the trough in state and local government employment, we expect federal government employment to continue to shrink throughout the forecast. Our new Washington employment growth forecast for 2012 through 2017 averages 1.8% per year which is the same rate as assumed in November.

The jobs recovery is slow

Employment in the state has grown at an average annual rate of 1.5% since the employment trough in the first quarter of 2010 through the fourth quarter of 2012 compared to 1.4% for the nation. The 114,200 jobs gained over this period represent 57% of the jobs lost in the downturn. We don't expect to get back to our pre-recession peak until the third quarter of 2014. This represents more than six years of lost employment growth. By the end of our forecast horizon in 2017, total employment will be 177,900 (6.0%) above the previous peak.

The Boeing employment expansion has ended

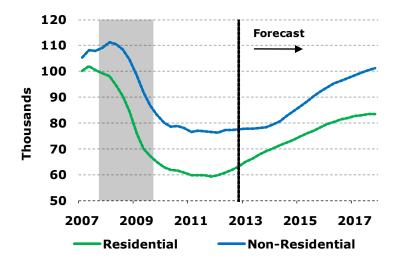

Despite rising production, Boeing has indicated that it thinks 2012 will be the peak in employment in its Commercial Airplane Division as development programs are ramped down and productivity continues to improve. As in September, we assume that aerospace employment peaks at the end of 2012 and begins to gradually decline in the second half of 2013. On an annual average basis, aerospace employment grew 7.1% in 2011 and 8.8% in 2012. We expect aerospace employment to grow 2.2% in 2013 on an average annual basis before declining 1.4% in 2014 and 1.5% per year in 2015 through 2017.

We expect the software sector to continue to add jobs The software sector is growing again and has recovered all of the jobs lost in the recession. We expect moderate job gains going forward. While the software employment growth is not expected to be spectacular, it will continue to have an outsized impact on the overall economy due to the high wages in this industry. Software employment rose 1.5% in 2011 and 1.4% in 2012 following an unprecedented 1.1% decline in 2010. We expect software employment growth to improve to 1.6% per year and an average of 1.7% per year in 2014 through 2017.

Construction employment growth has turned positive Construction employment finally stopped falling in early 2011 but remained flat for a year. Employment in the construction sector started showing sustained growth in spring of 2012 and posted a 1.5% growth rate for the year. This was the first increase in annual employment since 2008. Residential construction employment has turned strongly positive reflecting the upturn in housing construction but nonresidential construction employment has been essentially flat (see Figure 2.4). We expect residential construction employment to grow 9.1% this year but nonresidential employment will grow only 1.1%. Overall construction employment will grow 4.7%. We expect nonresidential construction employment growth to pick up beginning in 2014 and residential growth will remain strong. We expect overall construction employment growth to improve to 6.0% in 2014, and 8.0% in 2015 before slowing to 6.4% and 3.7% in 2016 and 2017. Even with these impressive growth rates, construction employment will still be 25,100 below its previous peak at the end of 2017.

Nonresidential construction employment is lagging

Figure 2.4: Washington Construction Employment, Seasonally Adjusted

Source: WA State Employment Security Department, ERFC March 2013 forecast; historical data through 2012  $\rm Q4$ 

Employment growth in financial activities will be positive but modest The slump in financial activities employment was even more protracted, though not as deep, as construction. Financial activities employment fell from a peak in 2006 to a trough in 2011 with only a 1.5% increase in 2012. Employment in credit intermediation and related activities accounts for most of the decline, followed by real estate and rental and leasing. Going forward, we expect modest growth for the next four years with growth of 0.8% this year, 1.1% in 2014, and 0.1% in 2015. We expect a cyclical downturn in the last two years of the forecast with growth rates of -1.7% in 2016 and -1.8% in 2017.

The retail trade recovery will be slow Retail trade is another highly cyclical sector that declined early and sharply but has now turned around. Retail trade employment grew 1.5% in 2011 and 2.1% in 2012 following declines of 0.2%, 5.5%, and 0.4% in 2008, 2009, and 2010. We expect retail trade growth to improve to 2.4% in 2013 based on fairly strong growth in recent quarters. The forecast assumes much weaker growth in the next four years as labor markets remain weak and households continue to repair their balance sheets. We expect growth to slow to 0.4%, 0.5%, 0.9%, and 0.7% in 2014 through 2017. It will be early 2016 when retail trade employment finally surpasses it previous peak.

We expect strong growth in professional and business services employment As is typical during recoveries, professional and business services will be one of Washington's fastest growing sectors. During a recovery, growth in this sector is boosted by gains in employment services, mainly temporary help services. As businesses gauge whether the increase in demand will continue, they typically hire temporary staff before they hire permanent employees. Employment growth in professional and business

services rebounded to 4.0% in 2011 from just 0.6% in 2010 and a 6.9% decline in 2009. Growth slowed to 2.7% in 2012 due to a slowdown in employment services and big cuts in waste management (Hanford) and accounting services. We expect growth to remain very strong in this sector throughout the forecast with growth rates of 3.2%, 4.5%, 4.5%, 4.4%, and 3.4% in 2013 through 2017. Professional and business services employment surpassed its previous peak in the fourth quarter of 2012.

State and local government employment cuts are nearly over

State and local government employment was a drag on the overall jobs recovery long after most other sectors turned around but we believe we have finally passed the trough. State and local government employment peaked in the fourth quarter of 2008 and declined almost continuously through the first quarter of 2012. Since then, employment levels have risen slightly. We expect essentially flat employment over the next few quarters with modest growth beginning in 2014. On an average annual basis, we expect state and local government employment to rise 0.4% this year, following a 0.3% decline last year. We expect employment growth to improve gradually in 2014 through 2017 with growth rates of 0.7%, 1.2%, 1.2%, and 1.0%. We do not expect government employment to reach the previous peak until the fourth quarter of 2015.

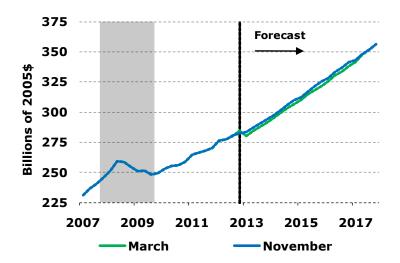

## **Washington Personal Income**

We assumed the fiscal cliff would be avoided - we were wrong The "fiscal cliff" deal reached in January and the ongoing sequestration are expected to have a negative impact on Washington personal income. The higher taxes beginning in January will lower Washington disposable personal income in 2013 by an estimated \$3.469 billion while the sequestration will cost Washington residents another \$0.501 billion (assuming it lasts only four months). Also, the expectation of higher taxes in 2013 caused an estimated \$720 million in dividend and wage income to be shifted into the fourth quarter of 2012 to take advantage of the lower tax rates in 2012. As a result, the forecast for disposable personal income growth in 2013 revised down from 3.4% in the November forecast to 2.3% in the current forecast. Without these fiscal policy impacts, the disposable personal income forecast for growth in 2013 would have increased from 3.4% to 4.0%.

Personal income will be lower We now expect Washington personal income to grow 2.9% this year, down from 4.1% in the November forecast due to the fiscal cliff deal and sequestration. Going forward, however, the personal income forecast is similar to the November forecast. We now expect growth to average 5.2% per year, slightly more than the 5.1% per year expected in November. The level of personal income will remain lower than expected in November throughout the forecast (see Figure 2.5).

"Fiscal Cliff" deal and sequestration reduce disposable income

**Figure 2.5: Washington Disposable Personal Income** 

Source: U.S. Bureau of Economic Analysis, ERFC March 2013 Forecast; historical data through 2012 Q4

## **Washington Building Permits**

Housing construction has been higher than expected The Washington housing recovery continues to exceed our expectations. Total housing units authorized by building permits averaged 31,000 (SAAR) in the fourth quarter, up from 28,000 in the third quarter. The November forecast had expected 28,300 units. The forecast variance was mostly in the single-family segment where permits averaged 19,500 units in the fourth quarter compared to our November forecast of 17,200 units. This was the strongest quarter for single-family housing since the first quarter of 2008. Multi-family permits came in at 11,500 units, slightly better than our forecast of 11,100 units. Initially the housing recovery in Washington was mostly in the multi-family segment but this is changing. Single-family as well as multi-family permits rose during 2012.

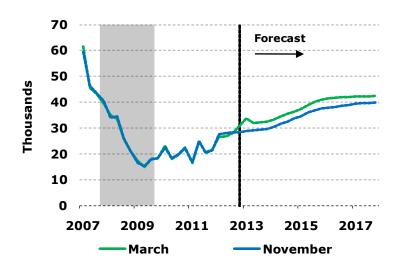

Growth in housing construction is increasingly in the single-family segment

As a result of the recent strength in housing, we have again raised our housing forecast for 2013 through 2017 (see Figure 2.6). While both single-family construction and multi-family construction have improved, single-family, which is still competing with a stream of distressed sales, remains relatively depressed. Multi-family construction, which is benefiting from rising rents and low vacancy rates, is back in the normal range for Washington. We expect the total number of units to increase 15.9% this year to 32,600 units. Multi-family permits will grow 11.9% to 12,500 units and single-family construction will increase 18.4% to 20,100 units. During the remainder of the forecast we believe the growth will increasingly shift to the

single-family market. The combination of low inventories and record affordability argues for strong growth in single-family housing construction as the economy recovers. We expect housing units to rise 7.2% to 34,900 in 2014, 12.5% to 39,300 in 2015, 6.5% to 41,800 in 2016, and 1.2% to 42,300 in 2017.

We have raised our housing forecast

#### Seattle Consumer Price Index

Seattle area inflation will slow as energy costs decline Inflation, as measured by the Seattle Consumer Price Index, has increased sharply since being less than one percent per year in 2009 and 2010. Declining shelter costs, which are measured by rents in the CPI, were responsible for much of the low inflation. Rents are now rising, however, and energy costs have risen sharply, causing inflation to jump to 2.7% in 2011 and 2.5% in 2012. We expect declining oil prices during the remainder of the forecast which should help restrain inflation. We expect Seattle inflation to decline to 1.8% in 2013, 2.2% in 2014, 2.0% in 2015 and 1.8% in 2016 and 2017.

Core inflation will remain moderate

Core inflation (excluding food and energy) in Seattle rebounded to 1.3% in 2011 and 2.6% in 2012 after a negative 0.5% in 2010. Falling shelter costs were the main reason for the decline but rents have since turned around. As the economic recovery continues, Seattle core inflation will increase but remain in a moderate range. We expect the core Seattle CPI to rise 1.9% this year, 2.3% in 2014, 2.0% in 2015, 1.9% in 2016, and 1.8% in 2017.

#### **Forecast by Fiscal Year**

Personal income growth will improve as the economy recovers

Nominal personal income growth improved to an estimated 5.1% in FY 2012 following a 4.8% increase in 2011 and a 1.3% decline in FY 2010. The turnaround in personal income growth is mostly due to a resumption of positive job growth after a big decline in fiscal 2010. Property income (dividends, interest, and rent) also recovered strongly in the last two years. The payroll tax cut, which took place halfway through fiscal 2011, added about one-half of a percentage point to growth in each of fiscal 2011 and fiscal 2012. We expect personal income growth to slow to 3.7% in fiscal 2013 due to higher taxes and the sequester before recovering to 4.5%, 5.2%, 5.0%, and 5.2% in fiscal 2014 through fiscal 2017.

Job growth is expected to accelerate

Washington nonfarm payroll employment continues to recover, rising 1.5% in fiscal 2012 following a 0.6% increase in fiscal 2010 and a 3.9% decline in fiscal 2010. Manufacturing employment increased 4.8% in fiscal 2012 while construction employment edged down 1.1%. Private service-providing employment rose 2.0% in fiscal 2012 but government employment declined 1.1%. We expect employment growth to continue to improve for the next few years as improving construction employment growth more than offsets declining manufacturing growth and the reductions in government employment subside. As the economic recovery continues, we expect overall employment growth to improve to 1.8% in FY 2013 and FY 2014, and 2.0% in FY 2015 and 2016, slowing to 1.7% in FY 2017.

Housing construction will continue to build momentum The number of housing units authorized by building permits in Washington continues to recover slowly, rising 15.2% in fiscal 2012 to 23,900 units following a 7.6% gain in fiscal 2011. Previously, permits had fallen 64% since the peak in FY 2006. Single-family permits increased 6.3% in FY 2012 to 14,300 units while multi-family units rose 31.8% to 9,600 units. We expect strong growth in both single-family and multi-family construction this fiscal year as single-family construction increases 33.2% to 19,100 units and multi-family construction increases 26.2% to 12,100 units. Overall permits will increase 30.4% this fiscal year to 31,100 units. Housing construction should continue to improve, growing 6.4% in FY 2014 to 33,100 units, 11.6% in FY 2015 to 37,000 units, 11.0% in FY 2016 to 41,100 units, and 2.5% in FY 2017% to 42,100 units.

Inflation will remain moderate

Inflation in the Seattle metropolitan area, as measured by the consumer price index for all urban consumers, increased to 1.2% in FY 2011 and 3.1% in FY 2012 from just 0.3% in FY 2010. Energy costs are largely responsible for the increase in inflation. Core inflation (excluding food and energy) rose a more moderate 2.4% in fiscal 2012. Energy costs will subtract from inflation in FY 2013 through FY 2017 as oil prices decline. We expect headline

inflation of 2.1% this fiscal year, 1.9% in FY 2014, 2.1% in FY 2015, 1.9% in FY 2016, and 1.8% in FY 2017.

Table 2.1 provides a fiscal year summary of the state economic indicators.

#### **Alternative Scenarios**

Alternate forecasts are prepared in accordance with state law In accordance with state law, the Washington State Economic and Revenue Forecast Council adopted a forecast based on optimistic assumptions and a forecast based on pessimistic assumptions.

#### **Optimistic**

The optimistic scenario assumes faster employment growth and sustained improvements in the housing sector lead to a stronger economy

The optimistic scenario is driven in part by a stronger recovery in residential construction. Housing starts continue to rise rapidly and eclipse 1.25-million units by the end of 2013. As credit conditions ease, nonresidential fixed investment rises 5.3% in 2013 and 11.2% in 2014. On the policy front, the sequester's spending cuts are replaced early in the second guarter with a credible long-term deficit-reduction plan, including lower entitlement program spending and a revenue-generating tax reform. Across the Atlantic, policymakers develop a credible progrowth plan to tackle sovereign-debt issues and prevent a financial meltdown. There are no exits from the Eurozone, as members take decisive steps towards a banking and fiscal union that stabilize markets. Chinese growth accelerates, driven by faster growth in domestic demand. With a stronger outlook and less fiscal uncertainty, consumer and business confidence rise sharply. The labor market continues to pick up steam, and by late 2013 the economy is adding more than 300,000 jobs per month. The unemployment rate drops below 7% by late 2013.

The optimistic scenario also assumes a much stronger Washington economy

In addition to reflecting the impact of the stronger U.S. forecast on the state economy, the optimistic Washington forecast assumes that aerospace employment continues to expand through late 2016 rather than leveling off in 2013 and declining in 2014 through 2017. Software employment growth is also much stronger than in the baseline forecast. Seattle inflation is higher than in the baseline forecast due to the stronger regional economy as is average wage growth. The strong local economy also drives population growth higher. The recovery in construction employment is much stronger than in the baseline forecast. By the end of 2017, Washington nonagricultural employment is higher by 170,500 jobs than in the baseline forecast and Washington personal income is \$41.0 billion higher.

#### **Pessimistic**

In the pessimistic alternative, the US economy suffers from poor policymaking domestically and weak growth abroad

In the pessimistic scenario, the economy has less underlying momentum than it had seemed, so that there is less of a cushion to absorb the drag from the sequester. The economy contracts 1.7% in the second quarter of the year. Hopes of a fiscal "grand bargain" fade quickly, and the sequester's automatic spending cuts extend for the whole of 2013. The inability of policymakers to resolve policy issues weighs on private-sector confidence, stock prices, and overall private-sector activity. The global outlook deteriorates rapidly, thus reducing the demand for US exports. This scenario assumes a more severe Europe-wide recession than in the baseline. Greece eventually exits the Eurozone in the second half of 2013 as funding from the "troika" dries up. Spain and Italy, in particular, face severe economic contractions and a renewed rise in interest rates to finance their debts, and Spain eventually must restructure its debt. In addition, global growth is restrained by a harder landing in China and weaker growth in other emerging economies. Weak sales lead to depressed income, low profits, and in turn declining employment, with the unemployment rate rising back toward 9%.

This scenario also assumes a weaker local economy At the state level, aerospace employment declines much more rapidly in 2013 through 2017 than assumed in the baseline forecast. Software employment begins to decline in 2013 and the reductions accelerate in 2014 and 2015. Population growth is also weaker than in the baseline forecast as migration into Washington drops. Construction employment also goes into a renewed slump, declining through the third quarter of 2014. The Seattle CPI is lower than in the baseline forecast, as are Washington wage rates, further depressing personal income. By the end of 2017, Washington non-agricultural employment is 213,400 lower than in the baseline forecast and Washington personal income is \$44.5 billion lower.

Table 2.2 compares the optimistic and pessimistic forecasts with the baseline forecast.

## Chapter 3: Washington State Revenue Forecast Summary

- The March state economic forecast was slightly weaker than that of November.
- Due to a \$125 million positive variance in collections since November, forecasted General Fund-State revenue for the 2011-13 biennium has increased by \$59 million despite a decreased outlook for the rest of the biennium.
- The weaker economic forecast has resulted in reductions to forecasted revenue of \$19 million in the 2013-15 biennium and \$49 million in the 2015-17 biennium.
- The revenue impacts of the weaker overall outlook were softened somewhat by an improved forecast of housing construction and sales.

#### Overview

The March economic forecast was weaker overall than November's but had a stronger forecast of housing permits and sales As outlined in Chapters 1 and 2, much of the difference between the March and November forecasts stemmed from the differences between November's assumptions of federal budget decisions and the current state of those decisions. The November forecast assumed the federal payroll tax cuts would be maintained, but instead they were eliminated. The forecast had also assumed that the spending cuts known as the "sequester" would largely be avoided, but now they are forecasted to go into effect through June. Although state revenue collections have been coming in above the November forecasts, the impacts of the payroll tax increase and spending cuts have reduced forecasted collections for the rest of the current biennium and a weaker outlook going forward has reduced the forecast for the next two biennia as well. The negative impacts, however, were lessened by an improved outlook for housing construction and sales, which increased forecasted revenue from those sectors.

GF-S forecast change by biennium (millions):

11-13: +\$59 13-15: -\$19 15-17: -\$49 Table 3.1 summarizes the changes to the forecast of General Fund-State (GF-S) revenue for the 2011-13 through 2015-17 biennia. As of March 10<sup>th</sup>, revenue collections were \$125.5 million ahead of the November 2012 forecast. For the remainder of the current biennium, \$66.7 million was subtracted from the forecast, for a total increase of \$58.8 million. Changes to the economic forecast resulted in reductions of \$19.3 million in forecasted revenue in the 2013-15 biennium and \$48.7 million in

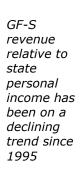

the 2015-17 biennium. With these revisions, GF-S revenue for the 2011-13 biennium is forecasted to total \$30,536.2 million and revenues for the 2013-15 and 2015-17 biennia are forecasted at \$32,541.4 million and \$35,306.2 million respectively.

Figure 3.1: GF-S Revenue (Current Definition) as Percentage of State Personal Income (Fiscal Years)

Source: ERFC, data through fiscal year 2012

The ratio of collections to income is at historical lows

As can be seen in Figure 3.1, the amount of GF-S revenue that is collected relative to state personal income is forecasted to reach its lowest levels in ERFC records. The ratio of revenue to income has been on a downward trend since 1995, broken only by the housing boom that raised the ratio from 2005 to mid-2008 and by temporary taxes and transfers of funds from non-GF-S sources into the GF-S that again boosted the ratio between fiscal years 2011 and 2013. The March forecast, as shown in the light blue shaded area, has the ratio decreasing sharply in FY 2014 as several temporary increases of taxes and transfers of revenue to the GF-S expire. The ratio then continues to trend downward at a more gradual pace through FY 2017.

The history of nominal and real GF-S revenue by biennium can be found in Table 3.3. GF-S revenue by agency and major

Forecast details are at the end of the chapter revenue classification for the 2011-13 biennium can be found in Table 3.5 (cash) and Table 3.6 (GAAP). GF-S revenue by agency and major revenue classification for the 2013-15 biennium can be found in Table 3.7 (cash) and Table 3.8 (GAAP). The GF-S forecast by fiscal year and major source category can be found in Table 3.9.

#### **Recent Collection Experience**

Cumulative receipts from major sources that are tracked monthly were \$125 million (2.5 %) more than the November forecast

Revenue collections from the Department of Revenue (DOR), Department of Licensing, Administrative Office of the Courts, and Lottery are tracked monthly. In the period since the November forecast, total revenue from the above sources came in \$125.5 million (2.5%) higher than expected (see Table 3.2). Revenue Act collections reported by the DOR were \$70.2 million (1.9%) above the forecast. Revenue from other DOR tax sources from November through February was \$55.5 million (4.4%) higher than expected. Most of this positive variance was due to real

Table 3.2: Pre-Forecast Collection Variance of Major General Fund-State Taxes by Agency (based on November 2012 forecast, cash basis, millions of dollars)

	Collection	Percent of
Agency/Source	<u>Variance</u>	<u>Estimate</u>
Department of Revenue		
Revenue Act	\$70.2	1.9%
Non Revenue Act	\$55.5	4.4%
Subtotal	\$125.8	2.5%
Department of Licensing	\$0.3	28.0%
Administrative Office of the Courts	(\$0.6)	-2.0%
Total*	\$125.5	2.5%

<sup>\*</sup> Detail may not add to total due to rounding. Source: ERFC; Period: November 11 - March 10, 2013

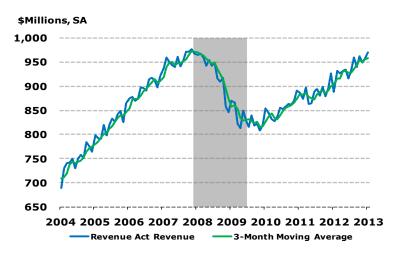

estate excise tax (REET) receipts, which came in \$51.6 million (40.5%) above the forecast. Liquor tax receipts were \$3.6 million (3.9%) higher than forecasted while cigarette tax receipts came in \$5.7 million (4.3%) lower than forecasted. Property tax receipts were \$0.4 million (0.0%) lower than forecasted. The sum of the variances of other DOR sources was \$6.4 million. Revenue from the Department of Licensing was \$272,000 (28.0%) higher than forecasted and revenue from the Administrative Office of the Courts was \$0.6 million (2.0%) lower than forecasted.

Adjusted Revenue Act collections were up 11.6% yearFigure 3.2 shows seasonally adjusted Revenue Act receipts excluding payments received under the tax amnesty program in early 2011 and other large payments. It is also adjusted for recent changes in payment patterns. As shown in the figure,

over-year in the most recent collection period but flat at 0.0% growth in the previous period collections have been on an upward trend since November 2009. Growth was aided by a temporary increase in the business and occupation tax rate paid by service industries that took effect in May 2010. Collections slowed in mid-2011 but have since resumed their upward course. Recent growth has been uneven, with year-over-year growth of 11.6% in the February 11 - March 10 collection period and 0.0% in the previous period. Trend growth is still below the levels of 2004 through 2007.

Figure 3.2: Revenue Act Collections\*

Seasonally adjusted Revenue Act collections remain on an upward trend

Source: ERFC; Data through March 10, 2013 preliminary allocation \*Adjusted for large payments/refunds and payment pattern change

Quarterly year-overyear Revenue Act growth is moderate Adjusted Revenue Act collections from November 11, 2012 – February 10, 2013, which primarily reflected fourth quarter 2012 activity, were up 5.0% year-over-year, down slightly from the 5.3% year-over-year growth in third quarter activity (August 11 – November 10, 2012 adjusted collections). Collections that represented second quarter 2012 activity grew at 6.8% year-over-year, due mainly to weak activity in the second quarter of 2011.

Year-end REET activity surged ahead of 2013 tax changes The large positive variance in real estate excise tax REET collections was due to an end-of-the-year surge in sales of commercial property and high-end single-family homes. The surge occurred in response to anticipated increases in capital gains taxes that took effect in 2013. The forecast included an end-of-the-year increase in sales, but the size of the actual increase far surpassed the forecast, with commercial sales of over \$1 billion in both November and December. This spike is visible in the chart of taxable activity (see Figure 3.3). Activity in the two months since the spike is returning to the lower trend established before the acceleration in commercial sales, which began in the spring of 2012.

Figure 3.3: Taxable Real Estate Excise Activity, SA

Over \$2 billion in sales of commercial property took place in November and December

#### **Revenue Forecasts by Source**

### **Department of Revenue**

Taxes collected by DOR are most of GF-S taxes The Department of Revenue (DOR) collects and administers the majority of Washington's GF-S revenue, accounting for 95% of total GF-S revenue in the 2009-11 biennium. The largest tax sources administered by the DOR are the retail sales tax, business and occupation tax, property tax, use tax, cigarette tax and real estate excise tax. The revenue forecasts discussed below can be found in Tables 3.5-3.8.

Retail sales taxes are the largest source of GF-S revenue The retail sales tax is the largest source of GF-S revenue, accounting for 45.3% of GF-S revenue in FY 2012. The state's share of the tax is 6.5% of the sales price. While construction labor, repair services, and some other services are taxed, the tax does not apply to most services. Taxable sales as a share of personal income has been declining. Their share fell sharply during the recession and has continued to fall through FY 2012. In that year, an estimated 34.6% of personal income was spent on taxable items, the lowest percentage on record. The taxable sales share of personal income is forecasted to remain roughly constant from FY 2013 through FY 2017 due mainly to forecasted growth in residential construction. The historical relationship between taxable sales and income is illustrated in Figure 3.4.

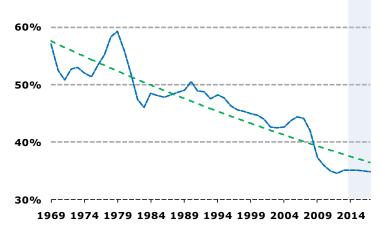

After declines of 10.4% in FY 2009 and 6.0% in FY 2010, taxable retail sales managed an increase of 1.8% in FY 2011 (see Table 3.4). Extra sales tax collections from the tax penalty amnesty program in the spring of 2011, however, brought the growth rate of actual collections up to 3.2% for the fiscal year. The growth rate of taxable activity is forecasted to improve from 4.1% in FY

Retail sales tax receipt growth forecast:

FY13: 5.3% FY14: 5.0% FY15: 5.2% FY16: 4.8% FY17: 4.9% 2012 to 5.4% in FY 2013 before slowing to 4.5% in FY 2014. Forecasted growth rates for FY 2015, 2016 and 2017 are 5.1%, 4.8% and 4.7% respectively. Taxable activity is not forecasted to regain its fourth quarter, 2007 peak until the third quarter of 2014. Taking into account the lag between taxable activity and collections and factoring in tax deferrals, credits and refunds, actual retail sales tax collections are forecasted to grow by 5.3% in FY 2013, 5.0% in FY 2014 and 5.2% in FY 2015. FY 2016 and FY 2017 collections are forecasted to grow at 4.8% and 4.9% respectively.

Figure 3.4: Taxable Sales\* as Percentage of State Personal Income

The ratio of taxable sales to state personal income is below a declining trend

\*Past tax base adjusted to represent current base. Shaded area indicates forecast  $\footnote{\cite{Number 1}}$ 

Source: ERFC; forecast through FY 2017

B& O taxes are the second largest source of GF-S revenue The business and occupation (B&O) tax is the second largest source of GF-S revenue, accounting for 21.0% of GF-S revenue in FY 2012. It is a tax on the gross receipts of all businesses operating in Washington. The state portion of the tax applies ten different rates according to various classifications of business activities. In FY 2012, the largest contributor to total state B&O tax was the services sector, which had a gross tax rate of 1.8% (the rate will revert to 1.5% in July 2013) and represented an estimated 45% of B&O taxes due. The next largest sector was retailing, which is taxed at 0.471% and represented an estimated 21% of taxes due, followed by the wholesaling sector, which is taxed at 0.484% and represented an estimated 19% of taxes due.

Due mainly to new revenue from the temporary increase of the B&O services tax from 1.5% to 1.8%, B&O tax collections grew by 16.9% in FY 2011. Receipts for the fiscal year were also increased by the tax penalty amnesty program and other legislative changes described in the <u>June 2010 Washington State Economic and Revenue Forecast publication</u>. FY 2011's elevated

B&O tax growth forecast:

FY13: 5.4% FY14: -1.8% FY15: 4.4%

FY16: 4.9% FY17: 5.4%

State property taxes are the third largest source of

GF-S revenue

receipts from the tax amnesty program, coupled with several large refunds in 2012, reduced FY 2012 growth to 3.9%. The refunds in FY 2012, coupled with an improving economy, increased the forecasted FY 2013 growth rate to 5.4%. The expiration of the temporary increase in the B&O service tax rate is forecasted to cause receipts to shrink by 1.8% in FY 2014 before growing by 4.4% in FY 2015, 4.9% in FY 2016 and 5.4% in FY 2017.

The state property tax levy is the third largest source of GF-S revenue, accounting for 12.6% of total revenue in FY 2012. Though the tax goes into the GF-S, it is dedicated to the funding of basic education. Under Initiative-728, passed in November 2000, a portion of the state property tax levy was transferred monthly from the General Fund to the Student Achievement Account, but beginning in FY 2010 the account has been consolidated into the GF-S under ESSB 5073. This added approximately \$260 million to FY 2010 GF-S revenue, inflating the growth rate to 19.4%. Absent the transfer, growth would have been 2.1%.

GF-S property tax growth forecast:

FY13: 1.8% FY14: 1.9% FY15: 2.1%

FY16: 2.2% FY17: 2.4% Under Initiative 747, approved by voters in November 2001, the total state tax levy on existing property can only increase by the lesser of 1% per year or the rate of inflation as measured by the year-over-year change in the U.S. Implicit Price Deflator in July of the year preceding the levy, unless a greater increase is approved by the voters (I-747 was ruled unconstitutional in 2007, but the legislature adopted a similar limit in a special session that year). The year-to-year growth in the total amount levied, however, can exceed the aforementioned limits due to the value of new construction, property improvements, and other additions to real property assessed by the state. Collections can also grow faster or slower than the rate of assessment growth due to the payment of past due taxes or nonpayment of current taxes. Property tax receipts grew by 2.1% in FY 2012 and are forecasted to grow by 1.8% in FY 2013, 1.9% in FY 2014, 2.1% in FY 2015, 2.2% in FY 2016 and 2.4% in FY 2017.

Use tax was the fourth largest GF-S source in FY 2012 The state use tax was the fourth largest GF-S revenue source in FY 2012 at 3.2% of total receipts. The state portion of the tax is 6.5% of the purchase price for items used in the state that were not subject to the state retail sales tax. Examples of items subject to the state use tax are goods purchased out-of-state; online and mail-order purchases, where sales tax was not collected; or purchases of used vehicles from private individuals.

Use tax growth forecast:

FY13: 7.7% FY14: 2.8%

FY15: 5.7% FY16: 5.2%

FY17: 4.4%

The tax penalty amnesty program brought in a large amount of past-due use taxes. As a result, FY 2011 collections increased 26.2% year-over-year. FY 2011 collections were also supported by an increase of sales of used or out-of-state vehicles, which can account for over one-third of use taxes depending upon the time of year. Because of the high FY 2011 collections, use tax

receipts declined by 10.1% in FY 2012. Growth in FY 2013 is forecasted to jump to 7.7% due to increased used vehicle sales. Growth is forecasted to slow to 2.8% in FY 2014 before increasing to 5.7% in FY 2015 due to increases in residential construction and manufacturing. Growth is then forecasted to slow to 5.2% in FY 2016 and 4.4% in FY 2017.

The cigarette tax was the fifth largest GF-S source in FY 2012 The state tax on cigarettes was the fifth largest DOR GF-S revenue source in FY 2012 at 2.9% of total receipts. Prior to FY 2010, the tax made up a much smaller portion of GF-S revenue because much of the tax was dedicated to non-GF-S accounts. In FY 2010, all of the tax except the portion dedicated to the Education Legacy Trust account was redirected to the GF-S, and in FY 2011 all of the cigarette tax was redirected to the GF-S. The current tax rate, which took effect May 1, 2010, is \$3.025 per pack of 20 cigarettes. Prior to that date, the tax rate was \$2.025 per pack.

Cigarette tax growth forecast:

FY13: -4.4% FY14: 0.5% FY15: -1.0% FY16: -0.4% FY17: -1.6% While the 2010 tax increase increased the total revenue brought in by the tax, the total number of taxed cigarettes has been on a downward trend, due to both a continuing decline in the number of smokers and an increase in tax avoidance by various means. In recent years, a growing number of people had been avoiding the cigarette tax by buying loose tobacco at a lower tax rate and assembling them into cigarettes in automated "roll your own" cigarette machines in the same store in which they had bought the tobacco. 3E2SHB 2565, passed in the second 2012 special legislative session, established that roll-your-own cigarettes assembled in a store are also subject to the cigarette tax as of July 1, 2012. Subsequent to the passage of the bill, however, a federal law that classified the owners of roll-your-own cigarette machines as manufacturers subject to all applicable federal regulations effectively halted their use nationwide. Going forward, without the increasing tax avoidance from the machines, cigarette sales are forecasted to decline more slowly, with a declining smoking rate just outpacing population growth. Cigarette tax receipts are forecasted to decline by 4.4% in FY 2013 after a 1.8% decrease in FY 2012, then increase by 0.5% in FY 2014 and decrease by 1.0% in FY 2015. Receipts are then forecasted to decrease by 0.4% in FY 2016 and 1.6% in FY 2017.

REET was the sixth largest GF-S source in FY 2012 The real estate excise tax (REET) was the sixth largest DOR source of GF-S revenue in FY 2012, accounting for 2.7% of total revenues. The state portion of REET is 1.28% of the sales price. The tax is divided between the GF-S (92.3%), a fund for local public works (6.1%) and a fund for assistance of cities and counties (1.6%). The tax is applied to both residential and commercial real estate, including purchases of vacant land.

Since peaking in FY 2007 in the final days of the real estate boom, REET collections have declined precipitously. Receipts dropped 38.0% year-over-year in FY 2008 and 41.3% in FY

REET growth forecast:

FY13: 23.5% FY14: -6.8% FY15: 14.9% FY16: 12.2% FY17: 6.0% 2009. A federal tax credit for homebuyers slowed the rate of decline to 2.4% in FY 2010, but the decline reaccelerated in FY 2011, with a drop of 7.8%. The increase in large commercial sales mentioned above boosted FY 2012 growth to 14.1%. Due to the continuation of these sales into the first half of FY 2013, the March forecast has been increased by \$54.2 million, increasing the forecasted growth rate to 23.5% from November's rate of 9.9%. Without the higher level of commercial sales, FY 2014 collections are forecasted to decline by 6.8%. An improving housing market is then forecasted to increase REET collections by 14.9% in FY 2015 and 12.2% in FY 2016 before slowing to 6.0% growth in FY 2017.

Public utility taxes were the seventh largest GF-S source in FY 2012 Public utility taxes were the seventh largest DOR source of GF-S revenue in FY 2012, bringing in 2.5% of total receipts. The tax applies to the gross income of sales to consumers by public and privately owned utilities and is in lieu of the B&O tax. The largest source of public utility taxes is the 3.873% tax on the distribution and generation of electrical power, followed by the 3.852% tax on the distribution of natural gas.

Growth forecast:

FY13: -0.7% FY14: 7.6% FY15: 6.3% FY16: 4.1% FY17: 4.6% FY 2012 utility taxes declined by 2.1% from their FY 2011 level, due mainly to falling natural gas prices. FY 2013 taxes are forecasted to decrease by 0.7% for the same reason. Forecasted increases in the prices of natural gas and electricity are expected to increase receipts by 7.6% in FY 2014 and 6.3% in FY 2015 before slowing to growth rates of 4.1% in FY 2016 and 4.6% in FY 2017.

## **Department of Licensing**

Forecast change by biennium (millions):

11-13: \$0.2 13-15: \$0.1 15-17: \$0.0 The majority of GF-S revenue collected by the Department of Licensing is from firearm and event licenses, watercraft excise tax, and boat registration fees. The department's forecast for the 2011-13 biennium has been increased \$0.2 million to \$33.7 million. The forecast of GF-S revenue for the 2013-15 biennium has been increased \$0.1 million to \$31.7 million and the forecast for the 2015-17 biennium is unchanged at \$31.6 million.

## The Office of Financial Management (Other Agencies)

Forecast change by biennium (millions):

The Office of Financial Management (OFM) is responsible for preparing General Fund-State revenue and transfer forecasts for all agencies excluding the Department of Revenue, the

11-13: \$7.8 13-15: \$1.5 15-17: \$7.4 Department of Licensing, the Liquor Control Board, the Insurance Commissioner, the Washington State Lottery, and the State Treasurer. The office's forecast for the 2011-13 biennium was increased \$7.8 million to \$212.6 million, due to increased insurance license and fee revenue and settlement payments from tobacco companies. The forecast for the 2013-15 biennium was

increased \$1.5 million to \$210.8 million. The forecast for the 2015-17 biennium was increased \$7.4 million to \$2.7 million due to an increase in forecasted fee revenue from the Department of Financial Institutions. The large decrease in forecasted revenue for the 2015-17 biennium is due to the assumed reinstatement of a \$102 million per year transfer of GF-S revenue to the Education Construction Account that has been suspended since FY 2010.

#### **State Treasurer**

Forecast change by biennium (millions):

11-13: \$1.6 13-15: \$1.6 15-17: -\$1.2 The Office of the State Treasurer generates GF-S revenue by investing state short-term cash reserves. The office's forecast for the 2011-13 biennium has been increased \$1.6 million to negative \$19.1 million and the forecast for the 2013-15 biennium has been increased \$1.6 million to negative \$13.2 million due to increases in forecasted average GF-S daily balances. The forecast for the 2015-17 biennium has been decreased \$1.2 million to negative \$8.8 million due to a reduction in forecasted interest earnings. The forecasted revenues for each biennium are negative because the average daily balance for each biennium is forecasted to be negative. When this occurs, the GF-S effectively pays interest to the other funds managed by the office.

#### **Insurance Commissioner**

Forecast change by biennium (millions):

11-13: -\$10.4 13-15: \$14.5 15-17: \$30.9 The Office of the Insurance Commissioner collects premium taxes on most classes of insurance sold in Washington State. These taxes are distributed to the GF-S and various accounts in support of fire services. The office's forecast for the 2011-13 biennium has been reduced \$10.4 million to \$847.5 million due to a large refund of previously paid taxes. The office's forecast of GF-S revenue for the 2013-15 biennium has been increased \$14.5 million to \$963.4 million and the forecast for the 2015-17 biennium has been increased \$30.9 million to \$1,075.3 million. Forecast changes for the 2013-15 and 2015-17 biennia were mainly the result of revised estimates of the revenue impacts of the federal Affordable Care Act.

## **Liquor Control Board**

Forecast change by biennium (millions):

11-13: -\$10.8 13-15: \$10.4 15-17: \$14.2 Historically, the Liquor Control Board generated GF-S revenue from both profits and fees from state-run liquor stores and funds from surtaxes on beer and wine. Under Initiative 1183, however, which was passed in November 2011, the Liquor Control Board no longer operates liquor stores as of June 1, 2012. The board will still collect new distributors' and retailers' fees created by the initiative, a portion of which will be passed on to the GF-S. The projected sum of these fees, along with the profits collected before closure of the stores and other fees collected by the

board, has been decreased \$10.4 million to \$195.1 million for the 2011-13 biennium. The forecast of beer and wine surtaxes for the 2011-13 biennium has been decreased \$0.5 million to \$154.1 million. The forecast of revenue from fees for the 2013-15 biennium has been increased \$10.7 million to \$145.9 million and the forecast of revenue from beer and wine surtaxes has been decreased \$0.3 million to \$54.9 million. The forecast of revenue from fees for the 2015-17 biennium has been increased \$14.4 million to \$139.7 million and the forecast of revenue from beer and wine surtaxes has been decreased \$0.3 million to \$55.5 million. Forecasted fee revenue for the 2013-15 and 2015-17 biennia is lower than that of the current biennium due to a scheduled reduction of the distributor's fee. Forecasted beer and wine surtaxes for the 2013-15 and 2015-17 biennia are lower than those of the current biennium due to the scheduled expiration of a temporary surtax on beer.

The March forecast does not include revenue from I-502 While Initiative 502, passed in November 2012, charges the Liquor Control Board with collecting fees from the growth, processing, and sale of cannabis and cannabis products, the forecast does not yet include any revenue from this source due to continued uncertainty over the federal response to such activities.

## **Lottery Commission**

Washington Opportunities Pathways Account forecast change by biennium (millions):

11-13: \$8.6 13-15: \$0.5 15-17: \$12.1 The disposition of proceeds from the state lottery was substantially changed by E2SSB 6409 in the 2010 legislative session. Prior to the passage of the bill, the Lottery Commission transferred the bulk of its net proceeds to the School Construction Account, and any proceeds remaining after that account and several smaller accounts received their allotments was transferred to the GF-S. Under the 2010 legislation, existing obligations to the Stadium/Exhibition Center, Problem Gambling and Economic Development accounts were maintained, but the remaining revenue, which represents the bulk of the proceeds, are transferred entirely to the Washington Opportunity Pathways Account, with no transfers to the GF-S. The forecast of transfers to the Opportunity Pathways Account for the 2011-13 biennium has been increased \$8.6 million to \$233.3 million. The forecast of transfers for the 2013-15 biennium has been increased \$0.5 million to \$222.8 million, and the forecast for the 2015-17 biennium has been increased \$12.1 million to \$230.8 million. Details of the forecast of the distribution of Lottery earnings can be found in Table 3.15 on a cash basis and Table 3.16 on a GAAP basis.

#### **Administrative Office of the Courts**

Forecast change by biennium (millions):...

The Administrative Office of the Courts collects surcharges on certain filing fees, fines, and infraction penalties and transfers this revenue to the GF-S on a monthly basis. The forecasted total

... transfer for the 2011-13 biennium has been decreased \$2.7 11-13: -\$2.7 million to \$186.9 million. The forecast of transfers to the GF-S for the 2013-15 biennium has been decreased \$9.7 million to \$184.6 million and the forecast for the 2015-17 biennium has been decreased \$7.8 million to \$196.4 million.

#### Track Record for the 2011-13 Biennium

The March forecast is \$1.4 billion (4.3%) lower than the March 2011 forecast on which the initial 2011-13 budget was based

Table 3.10 summarizes the historical changes to the GF-S revenue forecast for the 2011-13 biennium. The February 2010 forecast was the initial forecast for the biennium. The March 2013 forecast for the biennium is \$1.69 billion (5.2%) lower than the initial forecast. Non-economic changes have increased the forecast by \$1.7 billion (5.4%). Excluding non-economic changes, the current forecast is \$3.42 billion (10.6%) lower than the initial forecast. The current forecast is \$1.37 billion (4.3%) lower than the March 2011 forecast, which was the basis for the initial 2011-13 budget passed in the 2011 legislative session.

#### Track Record for the 2013-15 Biennium

The March forecast is \$113 million (0.3%) higher than the initial February 2012 forecast Table 3.11 summarizes the historical changes to the GF-S revenue forecast for the 2013-15 biennium. The February 2012 forecast was the initial forecast for the biennium. The March forecast for the biennium is \$113 million (0.3%) higher than the initial forecast. Non-economic changes have increased the forecast by \$330 million (1.0%). Excluding non-economic changes, the current forecast is \$217 million (0.7%) lower than the initial forecast.

## The Relationship between the Cash and GAAP General Fund-State Revenue Forecasts

GAAP forecasts are based on the period in which the revenue is earned rather than received Legislation enacted in 1987 requires that the state's biennial budget be in conformance with Generally Accepted Accounting Principles (GAAP). It also requires a GF-S revenue forecast on both a cash and GAAP basis. The GAAP forecasts of GF-S revenue for the 2011-13 and 2013-15 biennia are presented in Tables 3.6 and 3.8 respectively, and the GAAP forecast of Lottery revenue transfers for both biennia is in Table 3.16. The primary difference between the cash and GAAP forecasts is the timing of the receipt of revenue. On a GAAP basis, revenues are credited to the biennium in which they are earned even though they may not have been received. The cash forecast, on the other hand, reflects expected cash receipts during a fiscal period. The forecast on a GAAP, or accrual, basis is primarily used for financial reporting. The cash forecast is used for cash flow management, revenue tracking and is the forecast used in the state's budgetary balance sheet, which is the principal tool for assessing the General Fund's current surplus or deficit position. References to the GF-S forecast in the text of this chapter refer

to the cash forecast unless otherwise noted. Likewise, figures from revenue tables other than Tables 3.6, 3.8 and 3.16 are projected on a cash basis.

# **Budgetary Balance Sheet for the 2011-13 Biennium**

The forecast implies total GF-S reserves of \$433 million at the end of the 2011-13 biennium

Table 3.12 shows the budgetary balance sheet for the 2011-13 biennium as prepared by the Office of Financial Management and the House and Senate fiscal committees. By the final tally of 2009-11 revenue, the GF-S had a \$92.0 million deficit at the end of the 2009-11 biennium. Based on an assumed spending level of \$30,630.5 million in the 2011-13 biennium, the GF-S is projected to have total reserves of \$432.5 million at the end of the 2011-13 biennium. The expected total reserves are comprised of a projected GF-S ending balance of \$164.8 million and a projected balance of \$267.7 million in the Budget Stabilization Account.

## Alternative Forecasts for the 2011-13 and 2013-15 Biennia

Optimistic scenario:

2011-13: +296 million

2013-15: +\$2.7 billion

Pessimistic scenario:

2011-13: -\$308 million

2013-15: -\$2.8 billion Chapter 1 outlines upside and downside risks associated with the baseline economic forecast. The forecast assigns a probability of 50% to the baseline forecast, 15% to a scenario based on the upside risks and 35% to a scenario based on the downside risks. The revenue implications of these alternative scenarios for the 2011-13 and 2013-15 biennia are shown in Tables 3.13 and 3.14 respectively. For the 2011-13 biennium, the optimistic forecast generates \$30,833 million in revenue, \$296 million more than the baseline scenario, while the pessimistic forecast produces \$30,338 million in revenue, \$308 million less than the baseline. For the 2013-15 biennium, the optimistic forecast generates \$35,267 million in revenue, \$2,726 million more than the baseline scenario, while the pessimistic forecast produces \$29,775 million in revenue, \$2,787 million less than the baseline.

### Near General Fund Forecasts for the 2011-13 - 2015-17 Biennia

Near General Fund Forecast:

2011-13: \$30,772.7 million

2013-15: \$32,641.9 million

2015-17: \$35,494.2 million "Near General Fund" accounts are those included in the GF-S plus the Education Legacy Trust Account. The Education Legacy Trust Account was previously funded by a portion of the state tax on cigarettes and a tax on estates of over \$2 million. Legislation from the 2011 session, however, requires the cigarette taxes that formerly went into the account to instead be deposited into the GF-S. The Near General Fund forecast for the 2011-13 biennium is \$30,772.7 million, an increase of \$61.9 million from the November forecast. The forecasted increase is more than that of the GF-S due to a \$3.1 million increase in forecasted estate tax receipts for the Education Legacy Trust Account. The Near General Fund forecast for the 2013-15 biennium is \$32,641.9 million, \$179.6 million less than the November

forecast, and the forecast for the 2015-17 biennium is \$35,494.2 million, \$126.8 million less than the November forecast. The Near General Fund forecast and recent history by fiscal year are presented in Table 3.17.

A state
Supreme
Court ruling
will reduce
estate tax
receipts by
\$160 million
in the 201315 biennium
and \$78
million in the
2015-17
biennium

Most of the decrease in the Near General Fund forecast for the 2013-15 and 2015-17 biennia was due to large decreases in the Education Legacy Trust Account forecast. These decreases stemmed from a ruling from the state Supreme Court that disallowed the estate tax on certain types of joint estates. The ruling is expected to generate \$92.4 million in estate tax refunds in the 2013-15 biennium and reduce collections by \$67.9 million, for a total forecast reduction of \$160.3 million for the account. Refunds and reduced collections from the ruling are expected to reduce Education Legacy Trust Account revenue by \$78.1 million in the 2015-17 biennium.

<sup>\*</sup> Actual Base. Includes statutory and administrative changes to the tax base. Historical fiscal year data are from quarterly taxable sales reported by taxpayers on the state's Combined Excise tax return. Reported totals affected by enacted legislation. Major base changes include: exemption of off-premises food, beginning 1978:3 (fiscal 1979); extension of the sales tax base to off premises food (1982:2 to 1983:2); food again exempt 1983:3 (fiscal 1984); extension of the sales tax base to candy, gum and bottled water (June 1 - December 2, 2010).

## Glossary

**Biennium:** The state's two years budget cycle.

**CPI:** The Consumer Price Index for All Urban Consumers. The Bureau of Labor Statistics (BLS) updates the CPI monthly, surveying over 60,000 goods in 85 urban areas.

**Tax Elasticity:** A measure of how tax revenues respond to changes in personal income. If tax revenue elasticity is greater than one, a one percent change in personal income will be associated with more than a one percent increase in tax revenues. If elasticity is less than one, a one percent increase in personal income will be associated with less than a one percent increase in tax revenues.

**Fiscal Year**: The state's budget year. Washington State's fiscal year runs from July 1 through June 30. Fiscal year 2012, for example, ran from July 1, 2011 through June 30, 2012.

**GAAP Basis:** Generally Accepted Accounting Principles measure revenue in the period during which they accrue rather than the period in which they are received. General Fund: Accounts for all financial resources and transactions not accounted for in another fund.

**General Fund-State (GF-S) Revenue:** Resources from state sources only, excludes federal monies. The general fund is the principal state fund supporting the operation of the state.

**Implicit Price Deflator, PCE (IPD):** The IPD for consumption is a by-product of the National Income and Product Accounts. It is derived by dividing current dollar (nominal) consumer expenditures by constant dollar (real) consumer expenditures.

**Mortgage Rate:** The average interest rate on 30 year conventional loan (as reported by Freddie Mac).

**Near General Fund:** All accounts included in the General Fund - State plus the Education Legacy Trust Account.

**Non-Wage Income:** Personal income other than from wages and salaries. The major components are: proprietor's income, transfer payments, and dividends, interest and rent.

**Real GDP:** Gross Domestic Production adjusted for the price level.

**Personal Income:** Income from wages and salaries; other labor income; proprietor's income; dividends, interest and rent; transfer payments; and a residence adjustment. It is reduced by employee contributions for social insurance.

**Seasonally Adjusted:** Adjusted for normal seasonal variations. Monthly statistics, such as the unemployment rate, are seasonally adjusted to make month-to-month comparisons possible.

**Seasonally Adjusted Annual Rate:** A rate for a given period that is typically less than one year, but that is computed as if the rate were for a full year and seasonally adjusted.

**Nonfarm Payroll Employment:** Civilian non-farm payroll employees. The self-employed, farm workers, members of the armed forces, private household employees, and workers on strike are excluded.
