# Washington State Economic and Revenue Forecast

Prepared by the Economic and Revenue Forecast Council

November 2014 Volume XXXVII, No. 4

### **Preface**

#### **ERFC** forecasting structure and schedule

The Economic and Revenue Forecast Council is required by Chapter 231, Section 34, Laws of 1992 (RCW 82.33.020) to prepare a quarterly state economic and revenue forecast and submit it to the Forecast Council. This report presents the state's economic and General Fund-State revenue forecast. It is issued four times a year. The Washington State GF-S revenue forecast is prepared quarterly in conjunction with the state economic forecast for the Economic and Revenue Forecast Council. The Council consists of six members, two appointed by the Governor and four appointed by the Legislature - one from each caucus of the Senate and House of Representatives. Current members of the Economic and Revenue Forecast Council are listed inside the front cover of this publication. The GF-S revenue forecast is updated four times per year: March (February in even-numbered years), June, September, and November. The staff of the Economic and Revenue Forecast Council is responsible for the preparation of the state's economic forecast and the forecast of the Department of Revenue's GF-S revenue sources as well as GF-S revenue from fines and forfeitures collected by the Administrative Office of the Courts. The staff is also responsible for review and coordination of the revenue forecasts of other agencies that collect relatively large amounts of GF-S revenue. These are the Department of Licensing, the Office of the Insurance Commissioner, the Lottery Commission, the State Treasurer, the Liquor Control Board and the Office of Financial Management. The Office of Financial Management is responsible for summarizing the forecasts of all other state agencies that collect relatively smaller amounts of GF-S revenue.

#### **Forecast Procedure**

For each quarterly update, the staff of the Economic and Revenue Forecast Council, under the direction of the Executive Director, reviews (and if warranted, modifies) a national economic forecast prepared by Global Insight, Inc. A state economic forecast is then prepared using an econometric model that links Washington's economy to the national economy. After review by forecast workgroups; the Governor's Council of Economic Advisors; and the Economic and Revenue Forecast Council in public; this state economic forecast (updated for newly released data) is used to prepare a baseline revenue forecast for GF-S and the related funds. The forecasts are based on current law and administrative practices and do not reflect pending legal challenges to GF-S receipts until they are resolved. Additionally, at least two alternative forecasts are prepared for all GF-S and related fund sources and presented to the Forecast Council for approval. Once the Council approves the forecast, it becomes the official forecast of GF-S and related fund revenues.

Data in this publication are accurate through December 8, 2014

September 2014 iii

#### **Executive Summary**

- The national economy continues to advance at a moderate pace. Uncertainty remains elevated and downside risks continue to outweigh upside risks.
- U.S. real GDP continued its strong growth in the third quarter, growing 3.9% (SAAR) after a 4.6% (SAAR) gain in the second quarter.
- U.S. Employment growth in November exceeded expectations with the strongest job gains in nearly three years.
- Weak growth in Europe, China, and Japan remains a threat to the U.S. economy.
- The Blue Chip Consensus GDP forecast now calls for real GDP growth of 2.2% in 2014, up from 2.1% in the previous forecast. Real GDP growth is expected to increase to 3.0% in 2015, then slowly trend down to 2.4% in 2019.
- As expected in the September forecast, the Washington economy continues to expand at a moderate pace.
- Washington employment growth has been weaker than expected in September but historical estimates were revised higher.
- Washington single-family home construction remains weak. Estimates of household formation have been lowered. Seattle home prices have leveled off.
- Seattle shelter costs are rising much faster than the national average but overall inflation remains moderate.
- Revenue collections since September have come in \$68 million over the forecasted amount.
- Changes to the economic forecast since the September forecast have resulted in increases in expected revenue of less than one percent for the current and 2015-17 biennia and slightly more than one percent for the 2017-19 biennium.
- The forecast of General Fund-State (GF-S) revenue for the 2013-15 biennium was increased by \$108 million and the forecast for the 2015-17 biennium was increased by \$241 million. The forecast for the 2017-19 biennium was increased by \$415 million.

#### **U.S. Economic Forecast**

The economic recovery has continued

The national economy continues to advance at a moderate pace. Growth in gross domestic product (GDP) was again strong in the third quarter, increasing at a 3.9% (SAAR) rate after a 4.6% gain in the second quarter. Job gains remain solid as well,

averaging 241,000 per month so far this year. Significant threats to the economic recovery remain, however, keeping uncertainty elevated. Violence in the Middle East, the weak housing sector, and reduced economic growth overseas all threaten to derail the recovery. Overall, economic activity has generally been in line with the September baseline forecast of moderate growth and slowly declining unemployment.

GDP and employment growth have been strong Real GDP grew at a strong 3.5% annual rate in the third quarter, down from the 4.6% weather induced rebound in the second quarter. The Blue Chip Consensus GDP forecast now calls for real GDP growth of 2.2% in 2014, up from 2.1% in the previous forecast. Real GDP growth is unchanged from the September forecast for 2015 and 2016, at 3.0% and 2.9%. We expect growth of 2.7%, 2.5%, and 2.4% in 2017 through 2019. Employment growth in November exceeded expectations with the strongest job gains in nearly three years. The economy added 321,000 jobs in November, up from a 241,000 gain the month before.

The outlook for economic growth for major economies has been lowered The outlook for economic growth of major economies has been lowered since the September forecast. Europe has just emerged from a prolonged recession and economic activity remains low. With severe trade imbalances among member countries and strict austerity measures still in effect, we expect the slow growth to continue. China, which is our largest export market outside of North America, has slowed. Chinese growth remains well below their recent history and has prompted the government to introduce new stimulus measures. Japan has also entered into a surprise recession as consumption has slowed. Even with unprecedented monetary stimulus by Japan's central bank, real GDP growth is expected to be weak.

#### **Washington Economic Forecast**

The Washington economy continues to show moderate growth

In recent months the Washington economy has performed about as expected in the September forecast. Employment growth has been slightly weaker than expected but this was more than offset by upward revisions to past estimates. As anticipated, Washington personal income growth was weak in the second quarter, largely due to aerospace bonuses paid in the first quarter which were not repeated in the second quarter. Singlefamily housing construction was once again weaker than expected in the third quarter of 2014 but multi-family construction came in right on forecast. Seattle area inflation is slightly higher than the national rate due to rapidly rising shelter costs.

Washington will continue to outperform...

Our November forecast of 2014 Washington employment growth is higher than assumed in September mainly due to stronger than expected growth through October. Employment growth for the remainder of the forecast is the same as assumed in the

Executive Summary 2

...the U.S. in growth

September forecast. Our November forecast for nominal personal income growth this year of 4.7% is unchanged since the September forecast, however, our new forecast for nominal personal income growth from 2015 through 2019 averages 5.6% per year, up slightly from 5.5% in the September forecast. The number of housing units authorized by building permits was weaker than expected in the third quarter of 2014 due to yet another shortfall in single-family construction (multi-family construction was right on target). More importantly for the single-family construction forecast, newly released Census data indicate that fewer households are being formed than previously believed. As a result, we have delayed the recovery in single-family housing construction.

#### **Revenue Forecast**

Changes to the revenue forecast in November were once again slight but positive Revenue collections since the September 2014 forecast came in \$68 million higher than the expected total. Most of the surplus came from Revenue Act taxes (retail sales and use, business and occupation, public utility and tobacco products taxes), which came in \$55 million above the forecast. Preliminary data indicate the surplus in Revenue Act collections was due to stronger-than-expected third quarter economic activity. This surplus, along with an improved outlook for real estate excise tax collections, has provided a moderate lift to expected revenues in the current biennium, which ends in June 2015. Going forward, the slight changes to the economic forecast have increased expected revenue collections by less than one percent for the 2015-17 biennium and slightly more than one percent for the 2017-19 biennium.

GF-S forecast change by biennium (millions):

13-15: +\$108 15-17: +\$241 17-19: +\$415 As of November 10<sup>th</sup>, revenue collections for the 2013-15 biennium were \$68.1 million ahead of the September forecast. For the remainder of the biennium, forecasted revenue has been increased by \$39.8 million. The sum of these changes for the 2013-15 biennium is a forecast increase of \$107.9 million, with total biennial revenue of \$33,439.8 million. The forecast for the 2015-17 biennium has been increased by \$241.3 million and the forecast for the 2017-19 biennium has been increased by \$414.8 million. GF-S revenue is now forecasted to total \$36,319.5 million in the 2015-17 biennium and \$39,602.4 million in the 2017-19 biennium.

Executive Summary 3

#### Chapter 1: U.S. Economy – Current Conditions and Forecast

- The national economy continues to advance at a moderate pace. Uncertainty remains elevated and downside risks continue to outweigh upside risks.
- U.S. real GDP continued its strong growth in the third quarter, growing 3.9% (SAAR) after a 4.6% (SAAR) gain in the second quarter.
- Employment growth in November exceeded expectations with the strongest job gains in nearly three years.
- The modest housing market recovery has continued. Home prices are no longer increasing, although homebuilders remain optimistic.
- Federal fiscal policy remains a drag on economic growth through contractionary spending and tax policies. Monetary policy remains accommodative, but rate increases are expected next year.
- Weak growth in Europe, China, and Japan remains a threat to the U.S. economy.
- The Blue Chip Consensus GDP forecast now calls for real GDP growth of 2.2% in 2014, up from 2.1% in the previous forecast. Real GDP growth is expected to increase to 3.0% in 2015, then slowly trend down to 2.4% in 2019.
- A more robust recovery in housing remains the most significant upside risk. A slowdown in global growth is the major downside risk.

#### **Current Conditions**

The economic recovery has continued

The national economy continues to advance at a moderate pace. Growth in gross domestic product (GDP) was again strong in the third quarter, increasing at a 3.9% (SAAR) rate after a 4.6% gain in the second quarter. Job gains remain solid as well, averaging 241,000 per month so far this year. Significant threats to the economic recovery remain, however, keeping uncertainty elevated. Violence in the Middle East, the weak housing sector, and reduced economic growth overseas all threaten to derail the recovery. Overall, economic activity has generally been in line with the September baseline forecast of moderate growth and slowly declining unemployment.

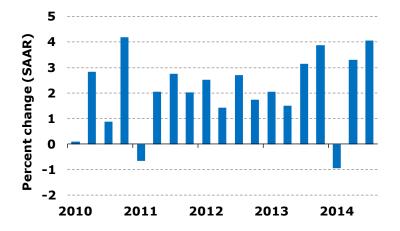

U.S. real GDP growth was...

U.S. real GDP continued its strong growth in the third quarter, growing 3.9% (SAAR). This was down from the 4.6% (SAAR)

...again strong in the third quarter gain in the second guarter, although the strong growth in the second quarter was partially the result of a rebound from the 2.1% (SAAR) weather-induced decline in the first quarter. Consumer spending made the largest contribution to growth, increasing 2.2% (SAAR) and adding 1.5 percentage points to overall GDP growth. Fixed investment, trade, and government were also large contributors to growth in the third quarter. Fixed investment increased 6.2% (SAAR), adding 1.0 percentage point to growth, fueled by strong growth in equipment purchases. Net exports contributed 0.8 percentage points to growth due to moderate gains in exports combined with a decline in imports. Recent trade data, however, suggest gains in international trade are unlikely to continue into the fourth quarter. Government spending was also strong in the third quarter adding 0.8 percentage points to top line GDP growth due to an increase in defense spending. This boost to growth is not likely to continue in the near term as a result of the focus on deficit reduction. Inventory investment was a slight drag to growth, subtracting 0.1 percentage points, although this will probably not continue into the fourth quarter. Real final sales, which exclude inventories and give a good indication of demand, grew 4.1% (SAAR) in the third quarter. This was up from the 3.2% growth in the second quarter and was the strongest growth since the fourth quarter of 2010 (see Figure 1.1).

Figure 1.1: Real Final Sales Growth, SAAR

Real final sales growth was the strongest since 2010 Q4

Source: U.S. Bureau of Economic Analysis; data through 2014 Q3

Personal income is rising, but real wage growth remains weak

Rising personal income is essential for consumer spending to improve. Real personal income was up 0.2% in October, the same growth as September but down from prior months. Real disposable personal income growth (income after taxes and adjusted for inflation) was 0.2% as well. While real personal income has continued to increase, real wage growth has been weak. Recent income gains have been led by income from dividends, rental income, and transfer payments excluding unemployment insurance benefits. With weak real wage growth,

spending growth has been inconsistent. Consumption growth rose 0.2% in October after no gain the month before. The personal saving rate held steady at 5.0%. Spending on durable goods dropped 0.2% after a 1.1% decline the month before. New vehicle sales have been relatively strong, increasing to 16.5 million units (SAAR) in October, up from 16.4 million units (SAAR) in September, but down from the post recession high of 17.5 million units (SAAR) in August. Nondurable goods spending was up 0.2% and spending on services increased 0.3% in October. Retail sales were up 0.3% in October, reversing September's 0.2% decline. Overall sales were held down by declining gasoline prices while sales excluding gasoline stations rose 0.5%. Early indications of the holiday shopping season show consumers are hesitant despite the boost in household budgets from lower gas prices. Chain store sales were up 1.7% since last year, the slowest growth in seven months. Sales both in stores and online over the Thanksgiving weekend were estimated to have dropped 11% since last year.

Employment growth exceeded expectations in November Employment growth in November exceeded expectations with the strongest job gains in nearly three years. The economy added 321,000 jobs in November, up from a 241,000 gain the month before. The estimates for employment growth in September and October were revised up by a total of 44,000 jobs. Employment growth has now been over 200,000 jobs each month for the past ten months. Job gains were broad-based. The private sector added 314,000 net jobs while public sector hiring turned positive with a 7,000 net gain. Nearly every major industry group had an acceleration in net hiring with the exception of leisure and hospitality. Goods producing industries were strong, with construction adding 20,000 jobs and manufacturing adding 28,000 jobs. Professional and business services was the largest contributor to the employment grains with payrolls growing by 86,000.

The labor market is improving The strong job growth is absorbing not only unemployed workers, but some new entrants into the labor force as well. While the unemployment rate was unchanged in November at 5.8%, it remains on a downward trend and is at its lowest level since July 2008. The labor force increased in November by 119,000 after gaining 416,000 the month before. The decline in the labor force participation rate since the beginning of the recession appears to have finally come to an end, holding steady at 62.8%. Previously discouraged workers are coming off the sidelines and re-entering the labor force now that they believe they have a chance at employment. Joblessness, while still elevated at 9.1 million people, has dropped by 41% since the recovery began. The most comprehensive measure of underemployment, which includes those marginally attached to the labor force plus workers employed part time for economic reasons, has declined from 16.5% to 11.4% since the start of the recovery. Initial claims for unemployment insurance remain on a downward trend and are now back to pre-recession levels.

For the week ending November 29<sup>th</sup>, the four week moving average of initial claims increased by 4,750. Even with the recent increase, the latest reading is down 9.0% from a year ago and down 54.6% since the peak in 2009.

Consumer confidence continues to trend upward

Consumer confidence has been increasing recently, but has yet to break out to levels typically seen at this point in a recovery. The recent fall in gas prices has given consumers some extra expendable income. An improving economy and stronger labor market conditions have enabled consumers to feel more confident as the recovery has unfolded. Rising home prices have also helped confidence recently, but with home prices now stagnating, this help will end. Equity markets continue to improve consumers' financial position. The most recent readings of confidence are mixed. The Conference Board reading shows that confidence took a big step back in November, dropping 5.4 points. Both the present conditions and expectations components fell. Consumers viewed business conditions as weaker and the job market as slightly tougher. Even with the decline, however, consumer confidence remains near a post recession high. The University of Michigan reading of consumer sentiment showed a 1.9 point increase in November, its strongest reading since July 2007. Consumers indicated they felt much better about their current finances, likely due to the drop in gas prices. Respondent's economic outlook improved as well. Both measures should continue to trend upward as the economic recovery continues.

Small business confidence is improving Small business confidence has followed a similar path as consumer confidence. The National Federation of Independent Business (NFIB) small business optimism index increased 0.8 points in October to 96.1. This matches the reading from August but remains below the post recession high of 96.6 in May. The details of the October survey were generally positive. Small businesses reported more job openings, hiring plans remained solid, more firms indicated they have capital expenditures planned, and credit conditions improved. One the negative side, firms had a slightly worse view of the outlook for expansion plans and general business conditions. Sales concerns continue to fall in importance as the recovery has continued. Low quality of labor is now emerging as an issue, cited by 11% of respondents as the most important problem they face. Taxes and government regulation remain the most concerning problems cited by a plurality of small businesses.

Oil prices have dropped sharply in recent months Oil prices have dropped sharply in recent months. Increased domestic supply combined with a global drop in demand has led oil prices to drop \$20 per barrel since September. West Texas Intermediate (WTI) was \$76 per barrel for the week ending November 28<sup>th</sup> while Brent was just under \$80 per barrel. Oil prices have come down even further since then after the Organization of the Petroleum Exporting Countries (OPEC) met

on Thanksgiving to set supply policy. The decision to maintain its production quotas instead of limiting output to support prices caused oil prices to plummet another \$10 per barrel. OPEC will now let prices keep falling in hopes that some of the more expensive drilling techniques being deployed in the U.S. will no longer be profitable and shut down. Amidst the recent drop in energy prices, geopolitical conflict has continued. Even with the conflict in the Middle East intensifying, energy markets have been able to digest the turmoil. Disruptions related to the unrest have been viewed as temporary and are no longer causing large price swings. Although Islamic militants have kept their grip in North and Western Iraq, their actions have had very little impact on the country's production and exports since major oil operations are in the south. Russia's intervention into Ukraine has continued as well, but this too has done little to raise prices.

Inflation remains low

Headline inflation remained steady in October, keeping the year-over-year change in the Consumer Price Index (CPI) at 1.7% for the third consecutive month. Energy prices dropped 1.9% led by declines in gasoline (-3.0%) and fuel oil (-4.0%). Utility gas services dropped 2.7% while electricity prices were up slightly. Overall, energy prices are down 1.6% from a year ago. While energy prices have declined, food prices have continued to trend upward. In October, food prices again moved up, increasing another 0.1%, and are now up 3.1% year over year. Both food at home and away have shown similar increases throughout the year. Shelter costs increased 0.2% and are now up 3.0% year over year. Core inflation, which excludes food and energy, increased 0.2% in October and is up 1.8% since last year.

The modest housing recovery has continued

The modest housing market recovery has continued after struggling to gain traction early in the year. Recent data have generally been positive and indicate that activity is set to accelerate. Investor purchases have propped up home sales, buying distressed homes to fix them up and resell them or became landlords. This source of housing demand is beginning to slow, however, now that fewer distressed homes are available for sale at deep discounts. The number of single-family rental homes rose by 19.3% from 2009 through 2013 while the stock of single-family homes increased just 2.3% over the same time period. Sales of existing homes rose slightly this past month. Completed sales in October increased 1.5% from September to 5.26 million units (SAAR). Sales are now 2.5% higher than a year ago. Single-family homes increased 1.3% while condo and co-op sales increased 3.3%. The market for existing homes is starting to tighten. Total inventory fell to 1.96 million homes from 2.02 million in September and represents a 5.1 month supply. Sales of new homes came in at 458,000 units (SAAR) in October, up 0.7% from September and 1.8% since last year. With the weak sales, the inventory of unsold homes edged up 1.0% from September to 212,000. This inventory corresponds to a 5.6 months' supply of new homes at the current sales pace. Mortgage rates continue to trend lower, reaching their lowest

level of the year in October at 4.04% for a conventional 30-year mortgage.

New construction has been modest despite homebuilders' optimism

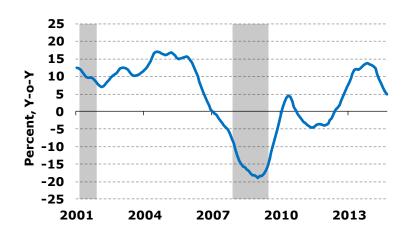

Home construction remains modest and well below levels seen before the recession. Housing starts slowed in October to 1.01 million units (SAAR) after coming in at 1.04 million units in September. Even with the slowdown from the prior month, housing starts are 7.8% higher than a year ago. The decline this month was due to a reversal of last month's increase in multifamily housing, which declined 15.4% in October after a 14.9% jump in September. Single-family housing increased 4.2% in October after a 4.2% increase the month before. Housing permits were positive this month. Total permits increased 5.9% in October and are now up 2.3% since last year. Multi-family permits were again strong, increasing 11.3% in October. Both housing starts and permits are hovering around the 1.0 million unit (SAAR) range, a level which would be considered weak prior to the recession. While housing activity remains sluggish, homebuilder confidence continues to improve. The National Association of Homebuilders (NAHB) housing market index. which measures confidence of homebuilders, indicates that homebuilders are optimistic. In November, the composite index was 58, just down from the post recession high of 59 in September and well above the average of 48 since its inception in 1985. Although the surge in confidence has not yet translated into a surge in activity, it is pointing to some upside risk to the housing market.

Home prices are no longer increasing

Home price appreciation is starting to decelerate and even turn negative. The seasonally adjusted Case-Shiller 20-city home

Figure 1.2: Case-Schiller 20-City Home Price Index, Year-Over-Year Growth

The rapid rise in home prices is over

Source: S&P/Case-Shiller; data through September 2014

price index increased 0.3% in September, the first increase since April. Home prices are still higher than a year ago, but the rate has been declining (see Figure 1.2). It appears the rapid increases in home prices seen early in the recovery are over. Prices have increased 20.9% since the trough of the recession, but remain 17.6% below their previous peak. The rise in home prices has been positive for the overall housing market. Rising prices have typically encouraged new construction and are enabling previously underwater homeowners to sell their homes and trade up for more expensive houses. Affordability issues have emerged however, especially among first time home buyers. Although homes remain affordable by historic standards, affordability is down sharply from the past two years.

The manufacturing sector continues to improve

The manufacturing sector continues to improve. The Institute of Supply Management (ISM) Report on Business indicated that activity in the manufacturing sector expanded again in November. The ISM index slipped to 58.7 from 59.0 the month before (index levels above 50 indicate expansion), but still indicated strong growth. Details from the report were generally positive. New orders edged up 0.2 points to 66.0 and production fell 0.4 points to 64.4. Both components continue to reflect robust strength. The employment component fell 0.6 points but remains positive at 54.9. The latest G-17 report from the Federal Reserve, which measures manufacturing output, indicated continued growth. Output increased 0.2% (SA) in October and remains 3.4% above last year. The production of durable goods rose 0.1% as large gains in machinery were partially offset by declines in nonmetallic mineral products and motor vehicle assemblies. Nondurable goods output increased, gaining 0.3%. Data for new orders for core capital goods (nondefense capital goods excluding aircraft) are possibly signaling some near term risk. Orders declined 1.3% in October after declining by the same amount in September. Shipments fell 0.4% in October, reversing last month's 0.4% gain.

Federal fiscal policy remains a drag on the recovery

Uncertainty surrounding federal fiscal policy has receded but spending reductions remain a drag on growth. While real federal government expenditures increased 4.2% (SAAR) in the third quarter, this was due to a sharp increase in defense spending that is likely to be reversed in the fourth quarter. In 2013, reductions in federal government spending are estimated to have reduced overall GDP growth by 0.8 percentage points. Unlike federal government spending which has continued to fall, state and local government spending is increasing. Due to improving tax revenues, state and local governments are no longer slashing spending to balance budgets. State and local government spending increased 0.8% (SAAR) in the third quarter, and has had positive growth in six of the past seven quarters.

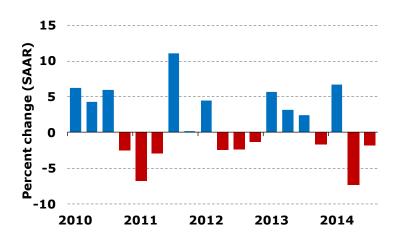

The Federal Reserve has ended its... Monetary policy remains accommodative, but the nontraditional policies of the last few years employed by the Federal Reserve

...quantitative easing program are coming to an end. In October, the Federal Reserve ended its quantitative easing program as planned. The Federal Reserve will continue buying mortgage backed securities and Treasury securities as part of its reinvestment program to prevent the balance sheet from declining in the near term. At the October meeting, the Federal Reserve also recommitted to keeping the fed funds rate near zero for a "considerable time" to support the economic recovery. The Federal Reserve decision-making process remains data driven. Rate changes could occur sooner or later than currently anticipated based on the progress of the economic recovery.

A recession in Japan is the latest threat to global growth Weakness in the Japanese economy is the latest threat to global economic growth. Japan slipped into a recession with second quarter GDP contracting at a 7.3% rate follow by third quarter GDP contracting at a 1.6% rate (see Figure 1.3). Much of the weakness came from a sharp drop in consumption as a long scheduled value added tax went into effect. The weak growth makes it likely that the next scheduled tax increase for October 2015 will be delayed. This will enable the stimulus measures planned to have greater effectiveness. Prime Minister Shinzo Abe has begun implementing his aggressive program to pull the country out of deflation. His "three arrows" plan of monetary stimulus, fiscal stimulus, and structural reform is aimed at addressing the decades old structural imbalances while also spurring demand.

Figure 1.3: Japanese Real GDP Growth, SAAR

Japan appears to have entered into another recession

Source: Organisation for Economic Co-operation and Development; data through 2014  $\ensuremath{\mathsf{Q}} 3$ 

Slower growth in China remains a risk to the recovery Economic activity in China has continued to weaken, threatening U.S. exports to China. Chinese GDP growth slowed to 7.3% (Y-O-Y) in the third quarter from 7.5% in the second quarter. This was the weakest growth since the first quarter of 2009. For China, growth below 8% is considered poor. China's real estate slump has been the main contributor to the slowdown. The

manufacturing sector has also been struggling with weak to no growth. In response to the weak growth, the Chinese government cut benchmark interest rates and there is an increasing likelihood of more stimulus measures in the near future. China has struggled to shift to a more consumer-based economy and lower its reliance on exports.

Weakness in European economies remains a threat to the recovery The weakness in European economies remains a threat to the U.S. economic recovery. Risks of a financial crisis remain and weak growth abroad limits U.S. export potential. The European economy remains stagnant and has just recently emerged from the recession that started at the end of 2011. The combination of the latest European recession with the 2007-09 recession has resulted in a historic period of economic weakness. Real GDP in the Eurozone is still lower than in 2008. Relative to the start of the 2007-09 recession, European output is now lower than at the same point in the recovery from the Great Depression. Although the Eurozone economy is no longer contracting, growth remains anemic. Real GDP in the Eurozone increased at a 0.1% annualized rate in the second quarter of 2014, down from a 0.9% rate the previous quarter. Some member countries continue to experience negative growth, including France and Italy. Job gains in the Euro area have been weak and unemployment elevated. Consumer confidence in the Eurozone dropped in November to its lowest level since February, Poor economic conditions across the European Union will continue to put financial pressure on member countries and keep the threat of a European financial crisis alive.

#### **Forecast**

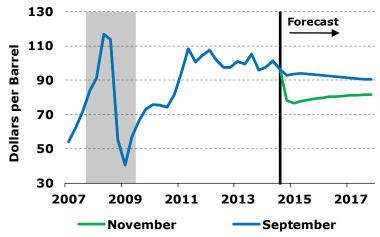

Our forecast is based on the November Blue Chip Consensus forecast The November 2014 economic forecast was based on a modified version of Global Insight's November 2014 Control forecast for the U.S. economy. Consistent with our standard practice, the U.S. real GDP forecast was adjusted to match the November Blue Chip Consensus GDP forecasts for 2014 and 2015. We also incorporated the latest long term Blue Chip GDP forecast for 2016 through 2019. Our oil price forecast was adjusted to incorporate futures prices for both Brent crude oil and for West Texas Intermediate crude.

Oil prices have plummeted, representing the biggest change since September The forecast for oil prices is the most significant change since the September forecast. Oil prices have dropped sharply over the past two months. Brent crude prices which were over \$100 per barrel as recently as the beginning of September, have fallen below \$80 per barrel. Similarly, WTI crude oil has fallen \$20 per barrel over the same period. The drop in crude oil has caused gasoline prices to plummet to under \$3 per gallon, just in time for the holiday shopping season. U.S. oil production has continued to increase, reaching over 9-million barrels per day in early November. Turmoil in oil-producing countries has continued, although markets seem to be less affected than in the

past. Libya's oil production is nearing 1.0 million barrels a day as the country was able to restart conflict-damaged refineries. Production is now close to the pre-revolution capacity of 1.6 million barrels per day. Escalating violence in Iraq and sanctions against Russia have not severely affected prices. Weak economic growth in China and Europe has lowered the demand for oil. The increase in U.S. production is expected to be enough to meet any increase in global demand going forward. While we no longer expect declining oil prices throughout the forecast, we do expect the lower prices recently experienced to be largely maintained. We expect prices to reach a trough in 2015 at \$78 per barrel. The forecast calls for prices to gradually increase, reaching \$83 per barrel in 2019 (see Figure 1.4). With oil prices no longer declining, inflation has been revised slightly higher in the outer years. We still expect low inflation throughout the forecast ranging from 1.1% in 2015 to 1.9% in 2018 and 2019. The previous forecast expected inflation to range from 1.2% to 1.6%.

Figure 1.4: Average Price of Crude Oil

The forecast calls for lower oil prices throughout the forecast

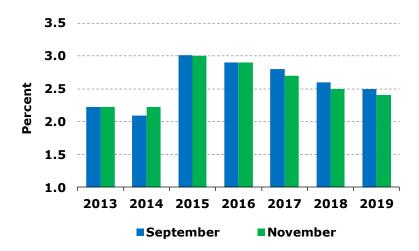

Source: DOE, ERFC November 2014 forecast; historical data through 2014Q3

Real GDP growth is only minimally changed The Blue Chip Consensus GDP forecast, our starting point each forecast cycle, now calls for real GDP growth of 2.2% in 2014, up from 2.1% in the previous forecast. Real GDP grew at a strong 3.5% annual rate in the third quarter, down from the 4.6% weather induced rebound in the second quarter. GDP growth is expected to moderate in the fourth quarter, growing 2.3%. Much of the slowdown from the third quarter is due to a reversal of defense spending growth and slower export growth. Real GDP growth is unchanged from the September forecast for 2015 and 2016, at 3.0% and 2.9%. In the out years, growth has been revised down slightly since the previous forecast by 0.1 percentage points in each year from 2017 through 2019. We now expect growth of 2.7%, 2.5%, and 2.4% in 2017 through 2019 (see Figure 1.5).

Figure 1.5: U.S. Real GDP Growth, SAAR

GDP growth is slightly lower in 2018 and 2019

Source: U.S. Bureau of Economic Analysis, ERFC November 2014 forecast; historical data through 2013

Consumer spending will not be a strong driver of GDP growth The forecast for consumer spending growth is essentially unchanged despite the slight reduction in GDP growth. While consumers are feeling more optimistic, stagnant wage growth continues to impede spending. The jobs recovery has continued at a moderate pace. Equity markets continue to increase although home values are beginning to plateau. As has been the case in the recovery so far, personal income growth will remain modest and consumer spending will not be a strong driver of growth in the recovery as is usually the case. We expect real consumer spending growth of 2.2% in 2014 before increasing to 2.7% in 2015 and 2016. We then expect consumption growth to slow throughout the remainder of the forecast, reaching 2.4% in 2019. We expect consumer spending to contribute 1.8 percentage points to real GDP growth on average for each year of the forecast through 2019.

Personal income growth will pick up Real disposable personal income growth is expected to rebound to 2.7% this year after declining 0.2% in 2013. This is higher than the 2.5% growth we expected in September due to stronger growth so far in the second half of the year. We expect growth in real disposable personal income to accelerate, reaching 3.9% in 2017. Growth is then expected to slow, growing 3.4% in 2018 and 3.2% in 2019. Nominal disposable income is expected to grow 4.2% this year, led by strong wage growth, particularly in the private sector. Wages and salaries are expected to grow 4.9% this year, the strongest growth since 2007. The forecast then calls for growth in wages and salaries of over 5.0% each vear for the remainder of the forecast. Income will also be boosted over the next few years by strong growth in dividend income as equity markets continue to rise. Interest income will add to overall personal income growth beginning in 2016 as interest rates rise and return to pre-recession rates.

The outlook for employment is essentially unchanged The forecast for employment growth is essentially unchanged since the September forecast. Growth in payrolls is expected to be 1.8% this year and to accelerate to 2.1% in 2015. We expect employment growth of 1.7% in 2016, trending down to 0.6% in 2019. The forecast calls for the U.S. economy to add 230,000 jobs per month on average through the end of next year as private sector gains continue and public sector hiring slowly increases. The forecast calls for job growth to slow through the rest of the forecast, averaging just 70,000 jobs per month in 2019 as labor force growth slows due to retiring baby boomers. As a result of the steady job growth, we expect the unemployment rate to drop over a full percentage point in 2014 to 6.2%, then to gradually fall to an average of 5.2% from 2016 through 2019. The continued strengthening of the labor market and corresponding fall in the unemployment rate will create an incentive for more and more marginally attached workers to begin looking for a job. Older people are also staying in the workforce longer. These two factors will push the labor force participation rate up from a trough of 61.5% this year to 62.3% in 2018 and 2019.

Private sector hiring will continue to outpace public sector hiring Employment growth in nonfarm payrolls has been led by private sector hiring throughout the recovery as the public sector has been weighed down by budget concerns. While state and local governments have largely worked through their budgetary issues and have started hiring again, the federal government continues to shed jobs. We expect the drag from weak government job growth to continue through 2017. Private sector employment is estimated to have reached 116.6 million in the second quarter of this year, making up all of the jobs lost during the recession. We do not expect the job losses in the public sector to be made up until the second half of 2019. Federal government employment will continue to decline throughout the forecast, but this will be offset by modest gains in state and local government employment. The forecast calls for total government employment to increase 0.1% this year after declining in each of the previous four years. Growth in government payrolls will slowly increase throughout the forecast, reaching 1.2% in 2018 before slowing to 1.1% in 2019. We expect private sector job growth of 2.1% this year increasing to 2.4% in 2015. The forecast calls for private sector job growth to gradually slow throughout the remainder of the forecast to just 0.5% in 2019.

Business investment is improving

Business investment continues to improve although there are several potential headwinds to spending. Vacancy rates for office buildings are no longer declining and remain high. The national vacancy rate in the third quarter held steady at 16.8% for the third quarter in a row. The drop in oil prices, which is good for overall growth, lowers the incentive for additional investment by energy companies. The weak economic outlook abroad has also given businesses pause. Companies still have a high level of cash on hand and borrowing rates remain low. We expect nonresidential construction to rebound with 7.8% growth this

year, up from a 0.5% decline in 2013. The forecast calls for growth to weaken to 2.5% in 2015 before picking back up with growth of 4.1% in 2016, and reaching 8.0% in 2017. The forecast then calls for growth to slow through 2019. Equipment investment is expected to have strong growth throughout the forecast as businesses expand and improve productivity. Although we do not expect to see the double-digit growth experienced early in the recovery, we do expect capital equipment to remain an important driver of GDP growth. Investment in equipment and software is expected to grow 6.5% this year and then peak at 7.7% in 2015. The forecast then calls for growth to gradually decline to 3.9% in 2019. We expect overall real nonresidential fixed investment to average 6.0% growth over the next four years. Growth will slow to 5.3% in 2018 and 3.8% in 2019.

The modest housing recovery will continue

The housing recovery has continued after a temporary weatherinduced stall early in the year. Some of the barriers facing the housing sector have gradually started to erode. Lending standards have loosened somewhat for homebuvers and developers are getting easier access to credit. Total housing starts are once again over the 1.0 million unit (SAAR) threshold. The forecast calls for growth of 7.6% for this year, down from 18.6% in 2013. Much of the surplus of distressed properties caused by the recession has been worked through. Continued improvement in the housing market remains dependent on job growth and access to financing. The forecast expects robust growth in housing starts to continue in the near term. Growth in single-family starts is expected to be 2.9% this year, weighed down from the weak first quarter. Growth will increase to 17.1% in 2015 and 16.8% in 2016. Growth will remain strong in 2017 at 21.5%, surpassing 1.0 million units (SAAR) early in the year. The forecast then calls for single family housing to flatten in 2018 and 2019. The multi-family housing segment is expected to continue to grow at a double-digit rate for 2014 and 2015. The forecast calls for 11.7% growth this year and 16.1% in 2015 before slowing to 9.3% in 2016. After 2015, we expect the multifamily segment to remain in the 460,000 to 480,000 units per year range. The housing market will continue to improve, particularly while interest rates remain low by historical standards and inventories are lean. Mortgage rates for a conventional 30-year fixed rate mortgage are expected to rise from 4.2% this year to 6.1% in 2017 and then to level off. Population remains on an upward trend and employment continues to increase at a moderate pace. The number of housing units remains at a historically low level and there is considerable pent-up demand created by the recent lack of household formation. The forecast calls for total housing starts to reach 1.57 million in 2018 and remain at that level in 2019.

The pause in home price appreciation

Home prices, which had been increasing at double-digit rates, are beginning to decline. We do expect the pause in appreciation to be temporary. The inventory of distressed properties, which

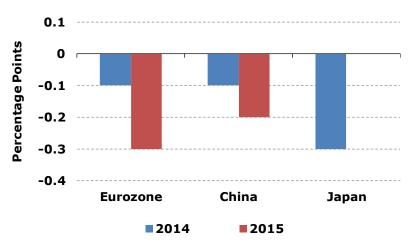

...will be temporary

held down home values, is slowly being worked through. First-time home buyers remain on the sidelines due to still tight credit standards and emerging affordability issues. Investor demand, which had been propping up overall housing demand in recent years, is falling as fewer housing markets are undervalued. The forecast calls for the median price of an existing single-family home to peak at \$205,300 in 2014 and remain flat through 2016. We then expect the median price of a home to slowly appreciate, growing 1.8%, 3.5%, and 3.6% in 2017 through 2019 and reaching \$224,100.

Weak foreign demand has weighed down export growth The outlook for economic growth of major economies has been lowered since the September forecast (see Figure 1.6). Europe has just emerged from a prolonged recession and economic activity remains low. With severe trade imbalances among member countries and strict austerity measures still in effect, we expect the slow growth to continue. The latest Blue Chip forecast calls for 0.8% growth this year for the Eurozone followed by 1.2% growth in 2015. The weak economic growth has led to painfully high unemployment with rates for the Eurozone as a whole above 10% for the past three years. This has had an adverse effect on consumer spending and reduced the exports of U.S. firms to Europe. The weakness in Europe has contributed to a slowdown in growth in other important U.S. trading partners as well. China, which is our largest export market outside of North America, in particular has slowed. Chinese growth remains well below their recent history and has prompted the government to introduce new stimulus measures. The latest Blue Chip forecast calls for growth of 7.3% in 2014 and 7.0% in 2015 for China. This is far below the Chinese growth seen from 2005 through 2011 of 11%. Japan has also entered into a surprise recession as consumption has slowed. A second round of planned tax increases is likely to be postponed as the country continues with

Figure 1.6: Change in Real GDP growth forecast since September

GDP growth forecasts of major economies have been lowered

Source: Blue Chip Economic Indicators

its own stimulus measures. Even with unprecedented monetary stimulus by Japan's central bank, real GDP growth is expected to be weak at 0.9% this year and 1.3% in 2015.

Export growth will remain positive, but not at a level to stimulate the economy Foreign trade is not likely to provide as substantial a boost to the U.S. economy as previously expected. GDP growth in U.S. trading partners is expected to increase, but not at a rate sufficient to lift the U.S. economy to a higher growth path in the near term. The forecast calls for growth in U.S. trading partners to increase to 2.5% this year after growing 2.3% in 2013. GDP growth for these countries is expected to increase slowly, growing 2.8% in 2015. The forecast then calls for GDP growth in U.S. trading partners to average 3.2% through 2019. We expect real U.S. export growth of 3.3% this year, before increasing to 4.1% in 2015. The forecast calls for export growth of 5.0% in 2016 and 2017, improving to 5.4% by 2018 and 5.7% in 2019 as global economic conditions revive. Export growth is more than offset by increased imports starting this year. Net exports are expected to reduce overall GDP growth by 0.1 percentage points this year and be neutral in 2015. Beyond 2015, net exports are expected to reduce GDP growth by 0.2 percentage points on average through 2019 as the U.S. economy recovers and import growth picks up.

U.S.
policymakers
remained
focused on
deficit
reduction

While uncertainty surrounding fiscal policy remains low, policymakers remain focused on deficit reduction in the near term. The forecast calls for a \$192.0 billion reduction in the federal deficit between 2013 and 2016. After dropping sharply in 2013 by \$51.0 billion, we expect real defense spending to decline another \$16.1 billion in 2014 and then continue to fall at a diminishing rate through the remainder of the forecast. Real nondefense purchases will decline as well throughout the forecast. We expect a \$7.0 billion decline this year followed by a \$2.4 billion per year average reduction through 2019. With the prospect of expanded military action in the war against Islamic militants in Syria and Iraq, defense spending may be increased in the near term. Even with the potential increase, however, nondefense spending cuts might be required to offset them. Although federal government spending will continue to decline throughout the forecast, this will be made up by increases in government spending at the state and local levels. The forecast calls for 2014 to be the trough in total real government purchases. We expect low growth for the remainder of the forecast, gradually increasing to 0.7% in 2017 through 2019.

The Fed is starting to end its loose monetary policy The Federal Reserve is now in the process of ending the loose monetary policy it has used to support the economy. In October, the Federal Reserve ended its third round of quantitative easing citing "substantial improvement in the outlook for the labor market." There are now roughly \$4.5 trillion in various assets on its balance sheet that will take years to unwind. The Federal Reserve will continue to buy mortgage backed securities and

treasury securities to prevent the balance sheet from declining in the near term. The forecast calls for Fed policymakers to begin to raise interest rates in the middle of 2015. While the forecast still assumes inflation will be low and the labor market relatively weak, it is still anticipated that the Fed will be comfortable raising rates. We expect rates to rise gradually before leveling off in 2017.

Table 1.1 provides a fiscal year summary of the U.S. economic indicators. For calendar year tables, see the appendix.

#### **Risks to the Forecast**

Downside risks outweigh upside risks Our view of the risks to the forecast is similar to the November forecast. The largest change since the last forecast has been a drop in oil prices and a more robust recovery in consumer markets. On the downside, there is an increased risk of international economic weakness. The level of uncertainty in the baseline remains high. Downside risks continue to outweigh upside risks.

#### **Downside Risks (25% Probability)**

Housing sector relapse Household formation continues to fall. The housing-sector recovery never materializes. Declining affordability and tight supply remove the option for homeownership for many potential buyers.

Employment growth weakens

The recent level of employment growth proves temporary. Job growth is no longer sufficient to quickly reduce unemployment and bring new entrants back into the labor market.

Fiscal tightening Policymakers misinterpret weak growth and depressed confidence, decide on austerity, and cut discretionary spending, further reducing growth.

Hard landing in China

Global growth is restrained by a hard landing (growth <5%) in China. This leads to weaker growth in emerging economies in particular.

Sovereign debt contagion Sovereign debt worries reemerge in the southern periphery of the European Union and the EU Commission re-imposes fiscaltightening programs. Europe returns to recession and continued austerity measures increase the financial strains in Eurozone countries.

Slow Japanese growth Japan doesn't emerge quickly from recession. New stimulus measures only add to their growing debt and structural imbalances are unresolved.

Crisis in Ukraine escalates Tensions in Ukraine escalate, destabilizing the region. Oil shipments and financial linkages to Europe are stressed.

Middle East collapses

The conflict in Iraq and Syria escalates. Major oil infrastructure is compromised, reducing supply globally. The U.S. expands it military presence.

No wage growth

Real wage growth remains flat, resulting in a drop in spending.

#### **Upside Risks (20% Probability)**

OPEC engages U.S. producers in a price war OPEC producers do not respond to falling prices by cutting supply, and instead engage in a price war. Their hopes of making U.S. producers unprofitable do not materialize. U.S. producers keep expanding production.

Housing recovery ignites The housing sector improves faster than anticipated. Home prices continue to increase and buyers move off the fence. Affordability is not a major issue as income gains offset any increase in interest rates. Homebuilders respond and housing starts increase, leading to more hiring.

Employment growth continues

The recent trend of solid payroll gains continues, and the labor market recovery gathers steam. This triggers a virtuous cycle of jobs, income, spending, and yet more jobs.

Wages gains drive increased spending Pent-up demand, fueled by wage gains boosts confidence and consumer spending after years of economizing. Stock market gains reduce the desire for excess savings, further boosting spending.

Eurozone rebounds from stagnation The European Central Bank expands its monetary base, successfully leading the Eurozone away from deflation. They also develop a credible pro-growth plan to tackle sovereign debt issues.

Emerging markets rebound

Emerging market GDP growth accelerates. Global growth picks up and U.S. exports are boosted.

Stimulus measures in Japan are effective Stimulus measures in Japan quickly pull the country out of recession adding to global growth. U.S. exports are boosted by a newly expanding Japanese economy.

Chinese economy transitions smoothly China successfully transitions to a more consumption based economy.

# Chapter 2: Washington Economy – Current Conditions and Forecast

- As expected in the September forecast, the Washington economy continues to expand at a moderate pace.
- Washington employment growth has been weaker than expected in September but historical estimates were revised higher.
- Single-family home construction remains weak. Estimates of household formation have been lowered. Seattle home prices have leveled off.
- Per capita personal income is much higher in the Seattle-Bellevue-Everett area than other metropolitan areas and nonmetropolitan Washington.
- The annual revision raised the estimated level of Washington personal income in 2013 by \$4.403 billion (1.3%).
- Seattle shelter costs are rising much faster than the national average but overall
  inflation remains moderate.
- We expect the Washington economy to continue to outperform the U.S. economy.

#### **Current Conditions**

The Washington economy continues to show moderate growth

In recent months the Washington economy has performed about as expected in the September forecast. Employment growth has been slightly weaker than expected but this was more than offset by upward revisions to past estimates. As anticipated, Washington personal income growth was weak in the second quarter, largely due to aerospace bonuses paid in the first quarter which were not repeated in the second quarter. Singlefamily housing construction was once again weaker than expected in the third quarter of 2014 but multi-family construction came in right on forecast. Seattle area inflation is slightly higher than the national rate due to rapidly rising shelter costs.

Employment growth has been weaker than expected In the two months since the September forecast was adopted, the Washington economy added 8,300 jobs, 1,500 fewer than the 9,800 expected in the September forecast. The weaker than expected job growth was more than accounted for by private-

services providing industries which added only 4,200 jobs in September and October, 4,700 fewer than the 9,000 expected in the forecast. Software employment fell 900 jobs as the first wave of Microsoft layoffs took effect. The forecast had assumed a net reduction of 1,000 software jobs. The manufacturing sector added 600 jobs in the two-month period in spite of the loss of 1,200 aerospace jobs. The construction sector added 2,400 jobs in September and October while federal, state, and local government combined added 1,000 jobs. The state's unemployment rate rose to 6.0% in October from 5.7% in September and 5.6% in August. The October rate is still lower than the 6.8% in October 2013.

Historical employment data were revised up We have also incorporated another quarter of benchmark employment data from the Quarterly Census of Employment and Wages (QCEW). The new QCEW data and other revisions raised the estimated level of total employment in August 2014 by 8,400 jobs. As a result of the upward revisions to history and slightly weaker-than-expected growth, the total effect is 6,900 (0.2%) more jobs in October 2014 than expected in the September forecast.

Initial claims are steady at a low rate Initial claims for unemployment insurance have leveled off after declining for more than five years. The four-week moving average of Washington initial claims for unemployment insurance fell by more than 50% from the peak of more than 16,000 in February 2009 to around 8,000 in the spring of 2014. Since then, claims have fluctuated in a narrow range. The four-week moving average declined to 8,056 in the week ending November 29<sup>th</sup> from 8,243 in the previous week. Claims are now lower than at the onset of the recession.

Hourly earnings growth is improving

Growth in average hourly earnings has picked up, but average weekly hours continue to trend down. Private sector average hourly earnings in the twelve months ending in October 2014 were up 2.2% over the previous twelve month period. A year ago the comparable rate of increase was only 1.2%. However, average weekly hours declined 0.4% in the most recent twelve month period compared to the previous year which is the same rate of decline as a year ago. As a result of the improvement in average hourly earnings, average weekly earnings growth improved to 1.8% compared to 0.7% a year ago.

Export growth is strong thanks to agriculture and transportation equipment

Washington exports increased 9.2% in the third quarter of 2014 compared to the third quarter of 2013 on strong growth in transportation equipment and agriculture. Exports of transportation equipment (mostly Boeing planes) increased 15.0% over the year and exports of agricultural products increased 29.8% over the year. Exports of all other Washington commodities fell 5.6% over the year. This was the first year-over-year decline in "other" exports in two years.

Chapter 2 26

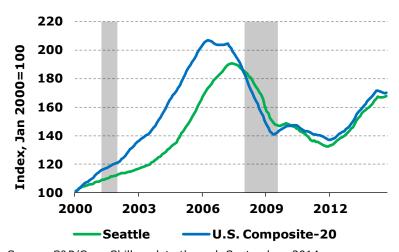

Single-family housing permits were weaker than expected in the third quarter

Single-family housing construction was once again weaker than expected in the third quarter of 2014 according to the building permit data. Single-family permits averaged 17,500 units (SAAR) in July, August, and September compared to a forecast of 18,300. Multi-family construction came in right on forecast at 15,600 units. Total housing units authorized by building permits averaged 33,100 (SAAR) in the third quarter. The September forecast had assumed 33,900 units. The fourth quarter started out weaker than the third quarter and weaker than expected in the November forecast. Single family permits in October came in at 16,500 units (SAAR) and multi-family at 16,000 for a total of 32,500 units. The November forecast assumed an average rate of 34,100 units for the fourth quarter as a whole.

Seattle-area home prices are up 26.7% since the trough Seattle-area home prices are flattening. According to the S&P/Case-Shiller Home Price Indices, seasonally adjusted Seattle area home prices increased 0.3% in September. While prices still appear to be trending higher, with only one monthly decline in the last five months, prices have increased a total of only 0.2% during that five-month period (see Figure 2.1). Previously Seattle home prices rose for 29 consecutive months since the trough in November 2011. Seattle home prices are still up 6.0% over the previous September and 26.7% higher than the November 2011 trough.

Home prices are flattening

Figure 2.1: Case-Shiller Home Price Indices

Source: S&P/Case-Shiller; data through September, 2014

In July 2014 Microsoft announced that it would lay off 18,000 employees worldwide. Most of these are related to the Nokia acquisition and will not be in the Puget Sound area. Nevertheless, the local impact will be significant. Also in July, 1,351 Washington employees were notified of layoffs. Another 747 were notified in September and 635 in October for a total of 2,733 by the end of the year. The local layoffs will be the largest

Software layoffs have begun in Microsoft history. In contrast, 2,101 Washington Microsoft employees were notified of layoffs in 2009. We do not expect any further large scale layoffs in the near future.

Aerospace employment will continue to decline Aerospace employment, which had been responsible for much of the strength in manufacturing early in the recovery, is now in decline. The aerospace sector lost 4,300 jobs from the peak in November 2012 through October 2014. We expect the reductions to continue but we believe that this downturn will be relatively mild due to the hefty backlog of orders. The current reductions are due to improvements in productivity and restructuring. The steep cuts in the past have been associated with production cuts which we do not expect over the next few years.

Manufacturing continues to expand

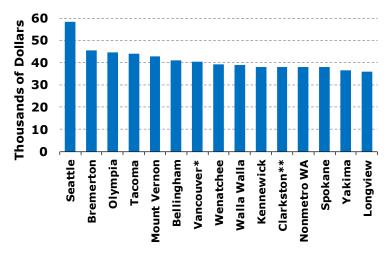

The Institute of Supply Management - Western Washington Index (ISM-WW) improved to 63.1 in November from 57.6 in October (index values above 50 indicate positive growth while values below 50 indicate contractions). The improvement was due to increases in the employment and inventory components. The production and orders components were unchanged and the deliveries component declined. The last time the ISM-WW index was below 50 was July 2009.

Car and truck sales declined in November

Bucking the national trend, Washington car and truck sales declined in November. New vehicle registrations totaled 269,600 (SAAR) in November which was 6.5% below the October figure and 7.5% lower than the post-recession-high 291,400 vehicles registered in August. Even after the big decline in November, registrations were still 1.0% higher than in November 2013.

The Seattle area has the state's highest per capita income

Figure 2.2: Washington Per Capita Personal Income

Source: U.S. Department of Commerce, Bureau of Economic Analysis; data through 2013

<sup>\*</sup> Part of the Portland-Vancouver-Hillsboro, OR-WA Metropolitan Statistical Area

<sup>\*\*</sup> Part of the Lewiston, ID-WA Metropolitan Statistical Area

King and Snohomish Counties account for nearly half of Washington personal income

The Bureau of Economic Analysis released <u>local area personal income estimates</u> for the nation's counties, metropolitan areas, and micropolitan areas in November. Approximately 90% of the state's population lives in counties that are part of metropolitan areas. The release showed that per capita income in the Seattle-Bellevue-Everett area (King and Snohomish Counties) was far higher than in other metropolitan areas and nonmetropolitan Washington (see Figure 2.2). The Seattle-Bellevue-Everett area is home to 40% of the state's population and accounts for 49% of Washington personal income.

Second quarter personal income growth was skewed by Boeing bonuses in the first quarter In late September, the Bureau of Economic Analysis released estimates of state personal income through the second quarter of 2014. Washington personal income grew at a 5.8% rate (SAAR) in the second quarter which ranked 38th among the states (including the District of Columbia) and was slightly lower than the 6.3% annual rate for the U.S. as a whole. Washington's growth in the second quarter was skewed by the very large bonus payments paid by Boeing in the first quarter. Excluding durable manufacturing wages, Washington's second quarter growth was 6.8% which ranked 15<sup>th</sup> among the states and District of Columbia and exceeded the 6.2% rate for the U.S. as a whole.

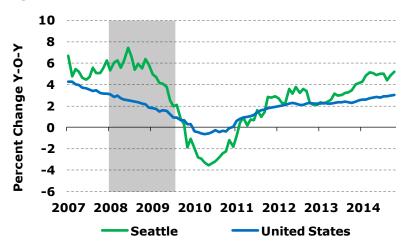

Historical personal income was boosted by a revision in dividend income

The September BEA release also reflected the annual revision of state personal income. Annual revisions are made "to incorporate source data that are more complete and more detailed than previously available." The annual revision raised the estimate of Washington personal income in 2013 by \$4.403 billion (1.3%) compared to the previously available estimate. The revision was more than accounted for by a \$5.108 billion (7.9%) increase in the estimate for dividends, interest, and rent. According to the revised estimates, Washington personal income increased 2.5% in 2013 which ranked 10th fastest among the fifty states and District of Columbia. The comparable national growth rate was 2.0%.

Seattle inflation is above U.S. inflation but still moderate Seattle shelter costs continue to rise much more rapidly than U.S. city average shelter costs but other prices are rising much more slowly. The Seattle CPI rose 2.1% from October 2013 to October 2014 compared to 1.7% for the U.S. city average. Similarly, core prices (all items excluding food and energy) increased 2.2% in Seattle compared to 1.8% in the U.S. However, shelter costs rose 5.2% over the year in Seattle compared to 3.1% for the U.S. city average (see Figure 2.3). All items excluding shelter rose only 0.6% in Seattle compared to the national average increase of 1.0%.

Seattle shelter costs are rising faster than U.S. shelter costs

Figure 2.3: Shelter Cost Indices

Source: BLS; data through October, 2014

# **Washington State Forecast**

The November Washington forecast reflects a very similar U.S. forecast

The November Washington State forecast is based on a new national forecast that is very similar to the forecast adopted in September. While real GDP growth in the near term is virtually identical to the September assumption, the new long term Blue Chip GDP forecast is slightly weaker. GDP growth in the November forecast averages 2.6% per year through 2019 compared to 2.7% in the September forecast. Employment growth is also slightly weaker at 1.3% per year compared to 1.4%. Real personal income growth averages 3.4% per year and PCE inflation averages 1.6% per year, both slightly higher than in September. Oil prices, however, are much lower than assumed in September in the fourth and first quarters but now rise during the remainder of the forecast. In September oil prices were expected to decline throughout the forecast though from a higher starting point. These minimal revisions in the national forecast feed through to the state economic forecast.

Washington will continue to outperform the U.S. in growth Our November forecast of 2014 Washington employment growth is higher than assumed in September mainly due to stronger than expected growth through October. Employment growth for the remainder of the forecast is the same as assumed in the September forecast. Our November forecast for nominal personal income growth this year of 4.7% is unchanged since the September forecast, however, our new forecast for nominal personal income growth from 2015 through 2019 averages 5.6% per year, up slightly from 5.5% in the September forecast. The number of housing units authorized by building permits was weaker than expected in the third quarter of 2014 due to yet another shortfall in single-family construction (multi-family construction was right on target). More importantly for the single-family construction forecast, newly released Census data indicate that fewer households are being formed than previously

believed. As a result, we have delayed the recovery in single-family housing construction.

# **Washington Payroll Employment**

Employment growth is stronger in 2014 than assumed in September Our November forecast of 2014 Washington employment growth is higher than assumed in September due mainly to stronger than expected growth through October. Employment growth for the remainder of the forecast is the same as assumed in the September forecast. Washington employment is expected to grow 2.8% this year compared to the 2.6% growth assumed in the September forecast. The November forecast for average annual employment growth from 2015 through 2019 is 1.6% per year, the same rate as expected in the September forecast.

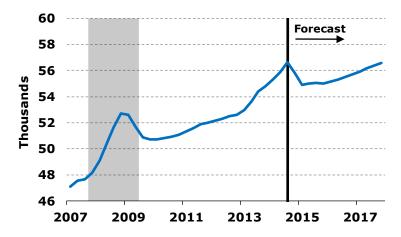

Aerospace employment is slowly declining Aerospace employment has performed about as expected during the last two months and we have not changed our expectation of a downward trend over the next few years. We continue to believe that this downturn will be relatively mild due to the large and increasing backlog of orders. The current reductions are due to improvements in productivity and restructuring. The steep cuts in the past have been associated with production cuts which we do not expect over the next few years. On an annual average basis, we expect aerospace employment to decline 2.8% in 2014, 2.7% in 2015, 2.5% per year in 2016 and 2017, 2.2% in 2018, and 2.0% in 2019.

Software employment will decline in the near term as the sector absorbs Microsoft layoffs

Software employment has been growing since the 2009 Microsoft layoffs. As of the third quarter of 2014, employment exceeded the previous peak by 4,000 jobs. The recently announced Microsoft layoffs have effective dates ranging from September to December 2014 and will result in sharp declines in the fourth

Employment will trend higher after the layoffs

Figure 2.4: Washington Software Employment

Source: WA Department of Employment Security, ERFC November forecast; historical data through 2014 Q3

quarter of this year and first quarter of 2015 (see Figure 2.4). After that we expect moderate positive growth to resume. Software employment rose 3.0% in 2013 which was the highest growth rate since 2008. We expect a growth rate of 3.6% in 2014 followed by a 1.6% decline in 2015. Positive growth is expected to return in 2016 through 2019 with growth rates of 0.8%, 1.5%, 1.4%, and 1.4%.

Construction employment is growing rapidly Construction employment continues to grow rapidly. We have slightly increased our forecast of construction employment growth this year to 7.3% compared to 7.2% in the September forecast. This will make 2014 the best year for construction employment growth since 2006. Most of the growth this year will be in residential construction with nonresidential construction employment growth picking up in 2015-2019. Overall construction employment will grow 6.0% in 2015, 5.9% in 2016, 4.7% in 2017, 4.4% in 2018, and 3.3% in 2019. Even with these impressive growth rates, construction employment will still be 5,900 below its previous peak at the end of 2019.

Financial activities employment will decline in 2016-19 Financial activities employment fell 19,400 jobs (12.2%) from a peak in the first quarter of 2006 to the trough in the second quarter of 2010. Employment in credit intermediation and related activities accounts for most of the decline, followed by real estate and rental and leasing. On a calendar year basis, financial activities employment grew 0.2% in 2011, 2.4% in 2012, and 4.1% in 2013. Going forward, we expect a declining trend in financial activities employment due to productivity growth and outsourcing. Employment will grow only 1.9% in 2014 and 0.5% in 2015 before declining 0.9% in 2016, 1.7% in 2017, 1.9% in 2018, and 0.9% in 2019.

Retail trade employment is benefitting from strong growth in electronic shopping Retail trade is another highly cyclical sector that declined early and sharply but has now turned around. Growth in Washington has been much stronger than the national average during the recovery thanks to our outsized and rapidly growing electronic shopping sector. Retail trade employment grew 1.5% in 2011, 2.1% in 2012, and 3.3% in 2013 following declines of 0.2%, 5.5%, and 0.4% in 2008, 2009, and 2010. We expect retail trade employment to grow 3.5% this year based on employment data through October. The forecast assumes weaker growth in the next five years as the recovery matures. We expect growth rates of 2.0%, 0.6%, and 0.2% in 2015 through 2017 followed by declines of 0.1% per year in 2018 and 2019.

We expect strong growth in professional and business services employment As is typical during recoveries, professional and business services will be one of Washington's fastest growing sectors. During a recovery, growth in this sector is boosted by gains in employment services, mainly temporary help services. As businesses gauge whether the increase in demand will continue, they typically hire temporary staff before they hire permanent employees. Employment growth in professional and business

services rebounded to 4.0% in 2011 from just 0.6% in 2010 and a 6.9% decline in 2009. Growth slowed to 3.1% in 2012 and 2.9% in 2013 due to a slowdown in employment services and big cuts in waste management (Hanford) and accounting services. We expect growth to remain very strong in this sector through 2017 with growth rates of 3.4%, 5.6%, 5.3%, and 3.0%. We expect growth to slow to 1.5% and 1.6% in 2018 and 2019.

State and local government employment will grow moderately

State and local government employment was a drag on the overall jobs recovery long after most other sectors turned around. State and local government employment peaked in the fourth quarter of 2008 and declined through the first quarter of 2012. Since then, employment levels have risen steadily but slowly. On an annual average basis, state and local government employment rose 0.8% in calendar 2013 following three years of decline. While we expect growth to improve, employment in the state and local government sector will not regain its previous peak until the first quarter of 2015. We expect moderate employment growth in 2014 through 2019 with growth rates of 1.3%, 1.1%, 1.4%, 1.5%, 1.6%, and 1.4%.

# **Washington Personal Income**

Personal income is higher due to revisions to property income estimates

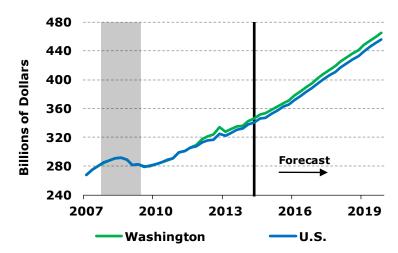

In late September, the Bureau of Economic Analysis released estimates for state personal income through the second quarter of 2014 along with revisions to historical estimates dating back to 2001. We have incorporated the new BEA estimates as well as additional Washington Quarterly Census of Employment and Wages (QCEW) and other wage data through the second quarter of 2014. Our current estimate of Washington personal income in the second quarter of 2014 is \$346.0 billion which is \$5.2 billion (1.5%) higher than assumed in September. The higher estimate for Washington personal income is almost entirely due to a large increase in the historical estimates for property income (dividends, interest, and rent).

Personal
income
growth is
slightly
higher due to
more
inflation

Our November forecast for nominal personal income growth this year of 4.7% is unchanged since the September forecast, however, our new forecast for nominal personal income growth from 2015 through 2019 averages 5.6% per year, up slightly from 5.5% in the September forecast. The higher nominal income growth forecast in 2015-19 reflects the slightly higher inflation in the new forecast. Real income growth in 2015-19 is forecasted to average 3.9% per year, the same rate expected in the September forecast. While personal income growth is similar to growth in the September forecast, the level is higher due to the annual revision which raised the estimates of Washington personal income in 2012 and 2013 (see Figure 2.5).

Figure 2.5: Washington Personal Income

Historical estimates were revised higher

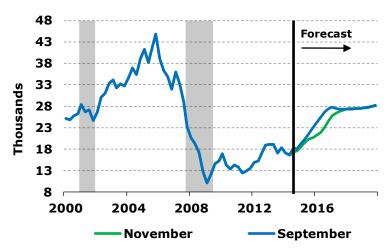

Source: U.S. Department of Commerce, Bureau of the Economic Analysis, ERFC November 2014 Forecast; historical data through 2014 Q2

# **Washington Building Permits**

Household formation is weaker than previously believed The number of housing units authorized by building permits was weaker than expected in the third quarter of 2014 due to yet another shortfall in single-family construction (multi-family construction was right on target). More importantly for the single-family construction forecast, newly released Census data indicate that fewer households are being formed than previously believed. As a result, we have delayed the recovery in single-family housing construction. Our November forecast for single-family and therefore total housing construction is lower than the

The recovery in single-family construction is delayed

Figure 2.6: Single-Family Housing Units Authorized

Source: U.S. Department of Commerce, Bureau of the Census Analysis, ERFC November 2014 Forecast; historical data through 2014 Q3

forecast adopted in September in 2014, 2015, and 2016. We now expect total housing units authorized by building permits to rise 2.8% to 33,900 units in 2014, 4.0% to 35,300 units in 2015, 9.7% to 38,700 units in 2016, and 9.9% to 42,500 units in 2017. Housing permits are expected to level off in the last two years, rising only 1.7% to 43,200 in 2018 and 1.6% to 43,900 in 2019.

#### **Seattle Consumer Price Index**

Inflation will remain moderate throughout the forecast

Core inflation (excluding food and energy) in Seattle slowed to 1.5% in 2013 from 2.6% in 2012. As the economic recovery continues, Seattle core inflation will increase but remain in a moderate range. We expect the core Seattle CPI to rise 1.8% per year in 2014 and 2015, increasing to 2.0% in 2016 and 2.1% per year in 2017, 2018, and 2019. The all-items Seattle CPI is also expected to rise 1.8% this year. The recent drop in oil prices will depress headline inflation to just 1.3% in 2015. We expect gradually increasing oil prices during the remainder of the forecast. We expect all-items Seattle area inflation rates of 1.9% in 2016, 2.1% in 2017, and 2.2% per year in 2018 and 2019.

Table 2.1 provides a fiscal year summary of the state economic indicators. For calendar year tables, see the appendix.

#### Alternative Scenarios

Alternate forecasts are prepared in accordance with state law

In accordance with state law, the Washington State Economic and Revenue Forecast Council adopted a forecast based on optimistic assumptions and a forecast based on pessimistic assumptions.

### **Optimistic**

In the optimistic scenario, low oil prices and strong exports boost growth

In the optimistic scenario, OPEC producers cut oil prices to compete with the United States to protect their market share. West Texas Intermediate oil prices decline as low as \$55/barrel, and Brent oil prices fall to \$64 by the end of 2015, driving down the price of gasoline. Meanwhile, the European Central Bank (ECB) expands its monetary base, successfully steering the Eurozone away from its current economic malaise. Eurozone fiscal conditions improve, credit conditions ease, and pent-up demand is released. The euro appreciates in response to the ECB's policy changes, as well as to changes in interest rates and economic performance. Emerging-market GDP growth accelerates as these markets implement structural reforms to increase labor productivity, and their exchange rates also appreciate against the US dollar. The exchange-rate depreciation begins to impact international trade about a year after it begins—the time it takes for businesses to recognize this change and for trade patterns to react to the shift in relative prices. Increased production capacity allows export growth to take off. Greatly increased production

brings significant wage and payroll gains. As employment and wage growth both pick up, they lift the pace of consumption growth.

The optimistic scenario also assumes a much stronger Washington economy

In addition to reflecting the impact of the stronger U.S. forecast on the state economy, the optimistic Washington forecast assumes that aerospace employment flattens out through 2016 rather than continuing to fall as in the baseline. Software employment growth is also much stronger than in the baseline forecast. National inflation is lower in the optimistic forecast than in the baseline forecast but Seattle inflation is about the same as in the baseline forecast due to the stronger regional economy. Washington average wage growth is higher in the optimistic scenario than in the baseline. The strong local economy also drives population growth higher. The recovery in construction employment is much stronger than in the baseline forecast with employment in the sector exceeding the previous peak in the first guarter of 2018. By the end of 2019, Washington nonfarm payroll employment is higher by 154,300 jobs than in the baseline forecast and Washington personal income is \$33.7 billion higher.

#### **Pessimistic**

Household formation stagnates and the housing market weakens The pessimistic scenario assumes household formation continues to fall over the next year due to poor wage growth, slower immigration, lower marriage rates, limited access to credit, degraded mobility, and onerous student loan burdens. Additionally, foreign growth weakens and consumer confidence sinks. Tight credit, a scarcity of developed lots, and rising construction costs further deter builders from adding to the housing stock. Inventories are tight, but demand is weaker, causing home prices to sink. Federal government spending contracts in the fourth quarter beyond what is forecasted in the baseline and continues to fall in subsequent quarters. Without a credible stimulus plan on the horizon, private-sector confidence deteriorates and stock prices drop. As both equity values and residential asset prices drop, the (negative) wealth effect kicks in and consumers scale back on their purchases. With businesses unwilling to expand further in such a weak environment, nonresidential fixed investment growth slows. In this scenario, US export growth declines as foreign growth opportunities wane. The double squeeze from weak domestic sales and slow exports weakens businesses, initiating a slowdown in payroll growth. Depressed wages, low profits, and slow employment growth ensue, with the unemployment rate rising back above 6.2% in late 2015.

This scenario also assumes a weaker local economy In addition to reflecting the impact of the weaker U.S. forecast on the state economy, aerospace employment declines much more rapidly in 2013 through 2019 than assumed in the baseline forecast. Software employment continues to decline after the scheduled layoffs rather than turning positive as in the baseline

forecast. Population growth is also weaker than in the baseline forecast as migration into Washington drops. Construction employment is essentially flat in the pessimistic alternative rather than rising as in the baseline. The Seattle CPI is lower than in the baseline forecast, as are Washington wage rates, further depressing personal income. By the end of 2019, Washington nonfarm payroll employment is 228,200 lower than in the baseline forecast and Washington personal income is \$45.5 billion lower.

Table 2.2 compares the optimistic and pessimistic forecasts with the baseline forecast.

#### **Governor's Council of Economic Advisors (GCEA)**

In the GCEA scenario, the U.S. and state forecasts were adjusted to match the average view of the Council members.

The
Governor's
Council
members
expect
weaker
output
growth but
higher
inflation

At the national level, the GCEA outlook for real GDP growth is the same as the baseline forecast in 2014 and 2015 but slightly lower in 2016, 2017, 2018, and 2019. However, real consumer spending growth in the Governor's Council scenario was very close to the baseline forecast throughout the forecast. The Governor's Council members expected higher inflation than predicted in the baseline forecast. As a result of the higher inflation assumption, nominal consumption is higher in the Governor's Council scenario than in the baseline forecast. The GCEA price forecast is similar to the baseline forecast. The Council members' mortgage rate forecast is the same as in the baseline this year and next year but slightly lower in 2016 through 2019.

The GCEA members expect weaker Washington income and job growth The GCEA scenario for Washington is also similar to the baseline forecast. Their real personal income growth forecast averages 3.4% per year in 2014 through 2019 compared to the baseline forecast of 3.8% but, because they expect higher inflation, their nominal personal income growth forecast is much closer (5.2% versus 5.4% in the baseline forecast). The council members' forecast for total employment growth is slightly weaker on average than the baseline forecast. Overall, their forecast expects a 1.7% average rate through 2019 compared to 1.8% per year in the baseline forecast. The GCEA forecast for manufacturing employment growth is lower than the baseline forecast as is their construction employment growth forecast. However, the Council members' housing permit forecast is higher. At the end of 2019, the GCEA forecast for Washington nonfarm payroll employment is 10,600 lower than in the baseline forecast and Washington personal income is \$5.8 billion lower.

Table 2.3 compares the GCEA forecast with the baseline forecast.

# Chapter 3: Washington State Revenue Forecast Summary

- Revenue collections since September have come in \$68 million over the forecasted amount.
- Changes to the economic forecast since the September forecast have resulted in increases in expected revenue of less than one percent for the current and 2015-17 biennia and slightly more than one percent for the 2017-19 biennium.
- The forecast of General Fund-State (GF-S) revenue for the 2013-15 biennium was increased by \$108 million and the forecast for the 2015-17 biennium was increased by \$241 million. The forecast for the 2017-19 biennium was increased by \$415 million.

#### **Overview**

Changes to the revenue forecast in November were once again slight but positive Revenue collections since the September 2014 forecast came in \$68 million higher than the expected total. Most of the surplus came from Revenue Act taxes (retail sales and use, business and occupation, public utility and tobacco products taxes), which came in \$55 million above the forecast. Preliminary data indicate the surplus in Revenue Act collections was due to stronger-than-expected third quarter economic activity. This surplus, along with an improved outlook for real estate excise tax collections, has provided a moderate lift to expected revenues in the current biennium, which ends in June 2015. Going forward, the slight changes to the economic forecast have increased expected revenue collections by less than one percent for the 2015-17 biennium and slightly more than one percent for the 2017-19 biennium.

GF-S forecast change by biennium (millions):

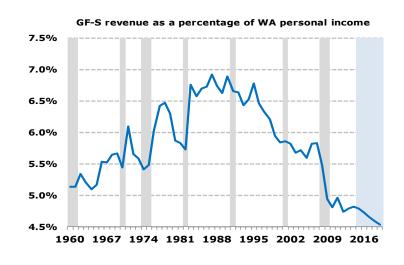

13-15: +\$108 15-17: +\$241 17-19: +\$415 Table 3.1 summarizes the changes to the forecasts of GF-S revenue for the 2013-15 and 2015-17 biennia. As of November  $10^{th}$ , revenue collections for the 2013-15 biennium were \$68.1 million ahead of the September forecast. For the remainder of the biennium, forecasted revenue has been increased by \$39.8 million. The sum of these changes for the 2013-15 biennium is a forecast increase of \$107.9 million, with total biennial revenue of \$33,439.8 million. The forecast for the 2015-17 biennium has been increased by \$241.3 million and the forecast for the 2017-

19 biennium has been increased by \$414.8 million. GF-S revenue is now forecasted to total \$36,319.5 million in the 2015-17 biennium and \$39,602.4 million in the 2017-19 biennium.

Figure 3.1: GF-S Revenue (Current Definition) as Percentage of State Personal Income (Fiscal Years)

GF-S revenue relative to state personal income has been on a declining

trend since 1995

GF-S forecast

#### Source: ERFC, data through fiscal year 2014

The ratio of collections to income is at historical lows

As can be seen in Figure 3.1, the amount of GF-S revenue that is collected relative to state personal income is forecasted to reach its lowest levels in ERFC records. The ratio of revenue to income has been on a downward trend since 1995, broken only by the housing boom that raised the ratio from 2005 to mid-2008, and by temporary taxes and transfers of funds from non-GF-S sources into the GF-S that again boosted the ratio in fiscal years 2011 and 2013. The ratio for FY 2014 is slightly higher than that of FY 2013, but the increase was due mainly to slow income growth in that fiscal year. The November forecast, as shown in the light blue shaded area, has the ratio continuing its downward trend after FY 2014, through the end of the forecast period in FY 2019.

Forecast details are at the end of the chapter The history of nominal and real GF-S revenue by biennium can be found in Table 3.3. GF-S forecast changes by agency and major revenue classification for the 2013-15 biennium can be found in Table 3.5 (cash) and Table 3.6 (GAAP). Forecast changes for the 2015-17 biennium can be found in Table 3.7 (cash) and Table 3.8 (GAAP). The GF-S forecast by fiscal year and major source category through FY 2019 can be found in Table 3.9.

## **Recent Collection Experience**

Cumulative receipts from major sources that are tracked monthly were \$68 million (2.7%) more than the September forecast

Revenue collections from the Department of Revenue (DOR), Department of Licensing, and Administrative Office of the Courts are tracked monthly. In the period since the September forecast, total revenue from the above sources came in \$68.1 million (2.7%) higher than expected (see Table 3.2). Revenue Act collections reported by the DOR were \$55.4 million (2.6%) above the forecast. Revenue from other DOR tax sources from September through October was \$12.9 million (3.7%) above the forecast.

Table 3.2: Pre-Forecast Collection Variance of Major General Fund-State Taxes by Agency (relative to the September 2014 forecast, cash basis, millions of dollars)

	Collection	Percent of
Agency/Source	<u>Variance</u>	<b>Estimate</b>
Department of Revenue		
Revenue Act	\$55.4	2.6%
Non Revenue Act	\$12.9	3.7%
Subtotal	\$68.3	2.7%
Department of Licensing	\$0.0	3.7%
Administrative Office of the Courts	(\$0.2)	-1.5%
Total*	\$68.1	2.7%

<sup>\*</sup> Detail may not add to total due to rounding. Source: ERFC; Period: September 11 - November 10, 2014

Most of the positive variance in collections came from strong Revenue Act tax activity

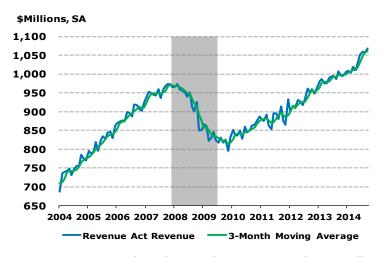

Preliminary data indicate the positive variance in Revenue Act collections was due to stronger-than-expected third quarter activity rather than non-economic factors such as tax credits or audit payments. Real estate excise tax (REET) receipts also came in well above the forecast, beating it by \$19.0 million (18.4%). Transfers of unclaimed property into the GF-S were \$3.9 million (11.3%) higher than forecasted. Cigarette tax receipts came in \$4.1 million (5.9%) higher than forecasted, but the surplus was due to the timing of payments and is likely to be reversed next month. Liquor sales and liter tax receipts were only slightly lower than forecasted, missing the mark by \$0.1 million (0.2%).

Property tax receipts came in \$19.1 million (27.5%) lower than forecasted. The shortfall, however, was due to a lower-than-forecasted volume of semi-annual payments that came in ahead of the October 31<sup>st</sup> deadline. The shortfall is therefore likely to be made up in next month's collections. Revenue from the Department of Licensing was \$34,000 (3.7%) higher than forecasted and revenue from the Administrative Office of the Courts was \$0.2 million (1.5%) lower than forecasted.

Adjusted Revenue Act collections were up 8.2% year over year in the most recent collection period and up 5.5% in the previous period Figure 3.2 shows seasonally adjusted Revenue Act receipts excluding payments received under the tax amnesty program in early 2011 and other large payments. It is also adjusted for some changes in payment patterns. As shown in the figure, collections have been on an upward trend since November 2009. Growth was aided by a temporary increase in the business and occupation tax rate paid by service industries that took effect in May 2010. This temporary increase expired on July 1, 2013. Adjusted for large one-time payments and refunds, receipts grew 8.2% year over year in the October 11 - November 10 collection period and 5.5% in the previous period.

Figure 3.2: Revenue Act Collections\*

Seasonally adjusted Revenue Act collections remain on an upward trend

Source: ERFC; Data through November 10, 2014 preliminary allocation \*Adjusted for large payments/refunds and payment pattern change

Third quarter Revenue Act collections grew 7.2% year over year Adjusted Revenue Act collections from August 11 – November 10, 2014, which primarily reflected third quarter 2014 taxable activity, were up 7.2% year over year. Revenue Act collections from second quarter activity (May 11 – August 10, 2014 adjusted collections) were up 4.5% year over year, while first quarter growth was 2.5% year over year. Year-over-year growth rates for the first and second quarters were lowered by about 2 percentage points each due to the expiration of the temporary business and occupation tax surcharge on July 1, 2013.

REET collections were elevated by sales of large commercial properties

Much of the large positive variance in REET collections was due to strong sales of commercial property. Sales of property worth \$10 million or more totaled \$1.4 billion in the two months since the last forecast, generating \$16.5 million in GF-S REET. Residential sales were also slightly higher than forecasted. Large commercial sales have been causing spikes in seasonally adjusted activity since November 2012 (see Figure 3.3), but such sales have been consistently elevated for the last four months.

# **Revenue Forecasts by Source**

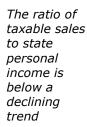

## **Department of Revenue**

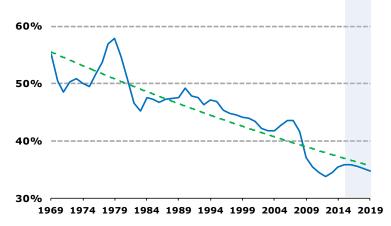

Taxes collected by DOR are most of GF-S taxes The Department of Revenue (DOR) collects and administers the majority of Washington's GF-S revenue, accounting for 95% of total GF-S revenue in FY 2014. The largest tax sources administered by the DOR are the retail sales tax, business and occupation tax, property tax, use tax, cigarette tax and real estate excise tax. The revenue forecasts discussed below can be found in Tables 3.5-3.8.

Retail sales taxes are the largest source of GF-S revenue The retail sales tax is the largest source of GF-S revenue, accounting for 46.9% of GF-S revenue in FY 2014. The state's share of the tax is 6.5% of the sales price. While construction labor, repair services, and some other services are taxed, the tax does not apply to most services. Taxable sales as a share of personal income have been declining. Their share fell sharply during the recession and continued to fall through FY 2012. In that year, 33.8% of personal income was spent on taxable items, the lowest percentage on record. The taxable sales share of

personal income grew to 34.4% in FY 2013 and 35.4% in FY 2014, due largely to the elimination of the sales tax exemption for wired phone lines that took effect on July 1, 2013. The share is then forecasted to increase slightly to 35.8% in FY 2015 and FY 2016 before declining through FY 2019. The historical and forecasted relationship between taxable sales and income is illustrated in Figure 3.4.

Figure 3.4: Taxable Sales\* as Percentage of State Personal Income

 $\ensuremath{^{*}\text{Past}}$  tax base adjusted to represent current base. Shaded area indicates forecast

Source: ERFC; forecast through FY 2019

Retail sales tax receipt growth forecast:

FY15: 6.1% FY16: 5.3% FY17: 5.5% FY18: 4.9% FY19: 4.3% The growth rate of taxable retail activity improved from 4.1% in FY 2012 to 6.7% in FY 2013, due mainly to increasing construction activity. Continued growth in construction, along with the newly-revoked sales tax exemption on wired home phone lines, brought growth in taxable activity of 6.4% in FY 2014. Growth is forecasted to slow to 5.8% in FY 2015 as the rate of construction activity growth slows, and continue slowing through the end of the forecast period, with 4.3% growth in FY 2019 (see Table 3.4). Due to the lag between taxable activity and collections and the presence of tax deferrals, credits, refunds, and payments of past due taxes, the growth in actual collections differs from the growth in taxable activity. Growth in collections for FY 2014 was 7.1%. Forecasted FY 2015 growth is 6.1%. Growth is then forecasted to slow to 5.3% in FY 2016 and 5.5% in FY 2017. FY 2018 growth is forecasted at 4.9% and FY 2019 at 4.3%.

Business and Occupation taxes are the second largest source of GF-S revenue The business and occupation (B&O) tax is the second largest source of GF-S revenue, accounting for 19.8% of GF-S revenue in FY 2014. It is a tax on the gross receipts of all businesses operating in Washington. The state portion of the tax applies ten different rates according to various classifications of business activities. In FY 2014, the largest contributor to total state B&O tax was the services sector, which had a gross tax rate of 1.5%

and represented an estimated 41% of B&O taxes due. The next largest sector was retailing, which is taxed at 0.471% and represented an estimated 23% of taxes due, followed by the wholesaling sector, which is taxed at 0.484% and represented an estimated 20% of taxes due.

B&O tax growth forecast:

FY15: 5.1% FY16: 5.5% FY17: 5.8% FY18: 5.2%

FY18: 5.2% FY19: 5.0%

State property taxes are the third largest source of GF-S revenue. Growth forecast:

FY15: 2.3% FY16: 2.3% FY17: 2.3% FY18: 2.4% FY19: 2.5%

REET was the fourth largest GF-S source in FY 2014

REET growth forecast:

FY15: 0.6% FY16: -1.2% FY17: 5.9% FY18: 3.8% FY19: 3.8% In FY 2013, B&O tax receipts grew by 5.8%. The expiration of a temporary increase in the B&O service tax rate on July 1, 2013, in addition to several large refunds, caused receipts to shrink by 1.8% in FY 2014. Growth is forecasted to rebound to 5.1% in FY 2015, 5.5% in 2016 and 5.8% in FY 2017. Growth in FY 2018 and 2019 is forecasted at 5.2% and 5.0%.

The state property tax levy is the third largest source of GF-S revenue, accounting for 12.0% of total revenue in FY 2014. Though the tax goes into the GF-S, it is dedicated to the funding of basic education. By law, the total state tax levy on existing property can only increase by the lesser of 1% per year or the rate of inflation as measured by the year-over-year change in the U.S. Implicit Price Deflator in July of the year preceding the levy, unless a greater increase is approved by the voters. The vear-to-vear growth in the total amount levied, however, can exceed the aforementioned limits due to the value of new construction, property improvements, and other additions to real property assessed by the state. Collections can also grow faster or slower than the rate of assessment growth due to the payment of past due taxes or nonpayment of current taxes. Property tax receipts grew by 2.1% in FY 2014 and are forecasted to grow by 2.3% in FY 2015 through FY 2017. Growth in FY 2018 is forecasted at 2.4% and FY 2019 growth at 2.5%.

The real estate excise tax (REET) was the fourth largest DOR source of GF-S revenue in FY 2014, accounting for 3.8% of total revenue. The state portion of REET is 1.28% of the sales price. The tax is divided between the GF-S (92.3%), a fund for local public works (2.0%), a fund for assistance of cities and counties (1.6%) and, as of July 1, 2013, the Education Legacy Trust Account (4.1%). The tax is applied to both residential and commercial real estate, including purchases of vacant land.

Due to a high number of large sales of commercial property, REET receipts grew by 34.0% in FY 2013. FY 2014 receipts were also boosted by large commercial sales, resulting in growth of 15.2%. Somewhat lower commercial sales coupled with strengthening in residential sales are forecasted to boost FY 2015 receipts by 0.6% above FY 2014 levels, but lower commercial sales are then forecasted to bring a decrease of 1.2% in FY 2016 despite further strengthening in residential sales. Residential sales growth brings forecasted growth of 5.9% in FY 2017, slowing to 3.8% growth in both 2018 and 2019.

Use tax was the fifth largest GF-S source in FY 2014 The state use tax was the fifth largest GF-S revenue source in FY 2014 at 3.4% of total receipts. The state portion of the tax is 6.5% of the purchase price for items used in the state that were not subject to the state retail sales tax. Examples of items subject to the state use tax are goods purchased out-of-state; online and mail-order purchases, where sales tax was not collected; or purchases of used vehicles from private individuals.

# Use tax growth forecast:

FY15: 6.2% FY16: 0.7% FY17: 5.2% FY18: 4.5% FY19: 4.3% Use tax receipts grew by 7.8% in FY 2014, boosted by strong sales of used vehicles and a temporary increase in payments from the manufacturing sector in the 4<sup>th</sup> quarter of 2013. Another temporary increase in the 3<sup>rd</sup> quarter of 2014, coupled with continued strong growth in construction and used vehicle sales is forecasted to bring growth to 6.2% in FY 2015. Growth is forecasted at only 0.7% in FY 2016 due to the spike in FY 2015 collections. Growth then returns to a more normal pace in FY 2017, 2018 and 2019 with rates of 5.2%, 4.5% and 4.3% respectively.

Public utility taxes were the sixth largest GF-S source in FY 2014 Public utility taxes were the sixth largest DOR source of GF-S revenue in FY 2014, bringing in 2.4% of total receipts. The tax applies to the gross income of sales to consumers by public and privately owned utilities and is in lieu of the B&O tax. The largest source of public utility taxes is the 3.873% tax on the distribution and generation of electrical power, followed by the 3.852% tax on the distribution of natural gas.

# Growth forecast:

FY16: 3.1% FY17: 4.6% FY18: 5.3% FY19: 4.6%

FY15: 1.2%

Public utility tax receipts grew by 4.5% in FY 2014. A slowdown in the rate of increases in natural gas and electricity prices is forecasted to lower growth to 2.3% in FY 2015. Larger increases in utility prices coupled with increased housing construction are forecasted to produce growth rates of 3.1% in FY 2016, 4.6% in FY 2017, 5.3% in FY 2018 and 4.6% in FY 2019.

The cigarette tax was the seventh largest GF-S source in FY 2014 The state tax on cigarettes was the seventh largest DOR GF-S revenue source in FY 2014 at 2.4% of total receipts. Prior to FY 2010, the tax made up a much smaller portion of GF-S revenue because much of the tax was dedicated to non-GF-S accounts. In FY 2010, all of the tax except the portion dedicated to the Education Legacy Trust account was redirected to the GF-S, and in FY 2011 all of the cigarette tax was redirected to the GF-S. The current tax rate, which took effect May 1, 2010, is \$3.025 per pack of 20 cigarettes.

#### Cigarette tax growth forecast:

FY15: -1.9% FY16: -3.1% FY17: -3.4% FY18: -3.3%

FY19: -3.0%

The total number of taxed cigarettes has been on a downward trend due to a continuing decline in the number of smokers. Recently, the rate of decline has been increasing further due to increased consumption of e-cigarettes, which are not subject to the cigarette tax but are subject to retail sales taxes. FY 2014 receipts decreased by 3.6%. Receipts are forecasted to decline by 1.9% in FY 2015, 3.1% in FY 2016 and 3.4% in FY 2017.

Collections in FY 2018 and 2019 are forecasted to decrease by 3.3% and 3.0%.

#### **Forecasted Revenue from Cannabis-Related Sales**

Sales of cannabis products in state-licensed stores began in July 2014 Initiative 502, approved by voters in the November 2012 election, legalized the sale and use of recreational cannabis and cannabis products in Washington. The first legal sales of cannabis products in state-licensed stores occurred in July 2014. Under the initiative, a cannabis excise tax of 25% is levied at each stage of growing, processing, and selling cannabis products. These taxes, along with annual license fees, will be collected by the Liquor Control Board and placed into a dedicated fund from which revenue will be distributed quarterly after required allotments are satisfied.

Change in GF-S forecast of total cannabis-related revenue by biennium (millions):

13-15: +\$4.0 15-17: +\$8.0 17-19: +\$2.5 Revenue from the first three months of cannabis sales have come in above the September forecast. Due to the small number of licensed retail establishments that have opened so far, however, forecasted FY 2015 revenue is still relatively low. Distributions of cannabis excise taxes to the GF-S, which amount to 18.7% of the distributed funds, plus license fees are forecasted to total only \$5.7 million in the 2013-15 biennium, an increase of \$2.6 million from the September forecast. GF-S distributions and fees are forecasted at \$36.1 million in the 2015-17 biennium, an increase of \$5.0 million, and are forecasted at \$63.0 million in the 2017-19 biennium, an increase of \$1.9 million. Details of the forecasted distributions from the account can be found in Table 3.18. In addition to this revenue, growers, processors and sellers will pay business and occupation (B&O) taxes and sellers will collect and remit retail sales taxes. These taxes, detailed in Table 3.19, are expected to total \$5.2 million in the 2013-15 biennium, an increase of \$1.4 million from the September forecast. The taxes are forecasted to total \$32.0 million in the 2015-17 biennium, an increase of \$3.0 million, and \$56.6 million in the 2017-19 biennium, an increase of \$0.6 million. The total forecasted GF-S impact of cannabis-related sales is therefore \$10.9 million in the 2013-15 biennium, \$68.1 million in the 2015-17 biennium and \$121.5 million in the 2017-19 biennium.

# **Department of Licensing**

Forecast change by biennium (millions):

13-15: \$0.0 15-17: \$0.1 17-19: \$0.1 The majority of GF-S revenue collected by the Department of Licensing is from firearm and event licenses, watercraft excise tax, and boat registration fees. The forecast of GF-S revenue for the 2013-15 biennium is unchanged at \$35.3 million. The department's forecast for the 2015-17 biennium has been increased \$0.1 million to \$35.4 million and the forecast of

revenue for the 2017-19 biennium has been increased \$0.1 million to \$36.1 million.

# The Office of Financial Management (Other Agencies)

Forecast change by biennium (millions):

13-15: -\$2.2 15-17: \$2.5 17-19:\$20.1

The Office of Financial Management (OFM) is responsible for preparing General Fund-State revenue and transfer forecasts for all agencies excluding the Department of Revenue, the Department of Licensing, the Liquor Control Board, the Insurance Commissioner, the Washington State Lottery, and the State Treasurer. The office's forecast of revenue for the 2013-15 biennium was decreased \$2.2 million to \$197.0 million due to a decreased forecast of transfers of revenue to the GF-S from the Commute Trip Reduction program. The office's forecast for the 2015-17 biennium was increased \$2.5 million to \$168.3 million, largely due to an increase in the forecast of revenue from the Department of Financial Institutions. The forecast for the 2017-19 biennium was increased \$20.1 million to \$194.8 million, due mainly to an increase in forecasted payments from the Tobacco Master Settlement Agreement.

#### **State Treasurer**

Forecast change by biennium (millions):

13-15: -\$0.4 15-17: -\$1.8

17-19: -\$0.3

The Office of the State Treasurer generates GF-S revenue by investing state short-term cash reserves. The office's forecast for the 2013-15 biennium has been decreased \$0.4 million to negative \$4.2 million. The forecasted revenue is negative because the average daily balance of accounts that earn interest that goes into the GF-S is forecasted to be negative. When this occurs, the GF-S effectively pays interest to the other funds managed by the office. The forecast for the 2015-17 biennium has been decreased \$1.8 million to \$5.7 million and the forecast of revenue for the 2017-19 biennium has been decreased \$0.3 million to \$30.4 million.

#### **Insurance Commissioner**

Forecast change by biennium (millions):

13-15: \$0.0 15-17: \$0.0 17-19: \$0.0 The Office of the Insurance Commissioner collects premium taxes on most classes of insurance sold in Washington State. These taxes are distributed to the GF-S and various accounts in support of fire services. The office's forecasts of GF-S revenue are unchanged at \$943.7 for the 2013-15 biennium, \$1,016.6 million for the 2015-17 biennium and \$1,085.6 million for the 2017-19 biennium.

Chapter 3 58

# **Liquor Control Board**

The Liquor Control Board (LCB) collects fees from distributors and retailers on sales of spirits and surtaxes on sales of beer and wine (sales and liter taxes on sprits are collected by the DOR). The LCB is also responsible for the collection of excise taxes and

Forecast change by biennium (millions):

13-15: \$2.4 15-17: \$7.6 17-19: -\$0.2 fees associated with the legalized sale and use of recreational cannabis. The forecast of total GF-S revenue collected by the LCB for the 2013-15 biennium has been increased \$2.4 million to \$258.5 million. The forecast of LCB GF-S revenue for the 2015-17 biennium has been increased \$3.9 million to \$246.4 million and the forecast of revenue for the 2017-19 biennium is unchanged at \$293.4 million. Most of the forecast changes were due to changes in forecasted cannabis excise tax receipts, which are transferred to the GF-S through the LCB.

# **Lottery Commission**

The Lottery Commission now transfers funds to the GF-S only when the revenue from certain games exceeds a \$102 million threshold

GF-S forecast change by biennium (millions):

13-15: \$0.0 15-17: \$2.9 17-19: \$11.8

Washington Opportunities Pathways Account forecast change by biennium (millions):

13-15: -\$0.3 15-17: \$2.1 17-19: -\$0.4 The disposition of proceeds from the state lottery was substantially changed by E2SSB 6409 in the 2010 legislative session. Prior to the passage of the bill, the Lottery Commission transferred the bulk of its net proceeds to the School Construction Account, and any proceeds remaining after that account and several smaller accounts received their allotments was transferred to the GF-S. Under the 2010 legislation, existing obligations to the Stadium/Exhibition Center, Problem Gambling and Economic Development accounts were maintained, but the remaining revenue, which represents the bulk of the proceeds, are transferred almost entirely to the Washington Opportunity Pathways Account (OPA). The exception is that when total profits from all Washington-only games plus the Powerball game exceed \$102 million per year, the amount above \$102 million gets transferred to the GF-S. In FY 2013, large Powerball jackpots pushed sales above the threshold, resulting in a \$9.3 million payment to the GF-S in FY 2014. Profits just exceeded the threshold again in FY 2014, resulting in a total GF-S transfer of \$9.9 million for the 2013-15 biennium. GF-S transfers totaling \$5.3 million are forecasted for the 2015-17 biennium, an increase of \$2.9 million from the September forecast, and \$14.6 million for the 2017-19 biennium, an increase of \$11.8 million.

The OPA receives all profits (excluding statutory transfers) from Washington-only lottery games plus all profits from the Mega Millions game. The forecast of transfers for the 2013-15 biennium has been decreased \$0.3 million to \$232.2 million, and the forecast for the 2015-17 biennium has been increased \$2.1 million to \$237.4 million. The forecast for the 2017-19 biennium has been decreased \$0.4 million to \$237.5 million. In addition to the transfers described above, legislation from the 2013 second special session and 2014 regular session also require the transfer

of \$16.1 million in Lottery proceeds to the Education Legacy Trust Account in the 2013-15 biennium. Details of the forecast of the distribution of Lottery earnings can be found in Table 3.15 on a cash basis and Table 3.16 on a GAAP basis.

#### **Administrative Office of the Courts**

Forecast change by biennium (millions):

13-15: -\$2.7 15-17: -\$5.0 17-19: -\$5.4 The Administrative Office of the Courts collects surcharges on certain filing fees, fines, and infraction penalties and transfers this revenue to the GF-S on a monthly basis. The forecast of transfers to the GF-S for the 2013-15 biennium has been decreased \$2.7 million to \$167.4 million. The forecast for the 2015-17 biennium has been decreased \$5.0 million to \$169.3 million and the forecast of transfers for the 2017-19 biennium has been decreased \$5.4 million to \$181.0 million.

#### Track Record for the 2013-15 Biennium

The November 2014 forecast is \$1.0 billion (3.1%) higher than the initial February 2012 forecast

Table 3.10 summarizes the historical changes to the GF-S revenue forecast for the 2013-15 biennium. The February 2012 forecast was the initial forecast for the biennium. The November 2014 forecast for the biennium is \$1.011 million (3.1%) higher than the initial forecast. Non-economic changes have increased the forecast by \$369 million (1.1%). Excluding non-economic changes, the current forecast is \$642 million (2.0%) higher than the initial forecast. The current forecast is \$655 million (2.0%) higher than the sum of the June 2013 forecast and the \$123 million in legislated revenue increases from the June 2013 second special session that were the basis of the initial budget for the 2013-15 biennium.

#### Track Record for the 2015-17 Biennium

The November forecast is \$801 million (2.3%) higher than the initial September 2012 forecast

Table 3.11 summarizes the historical changes to the GF-S revenue forecast for the 2015-17 biennium. The September 2012 forecast was the initial forecast for the biennium. The November 2014 forecast for the biennium is \$801 million (2.3%) higher than the initial forecast. Non-economic changes have increased the forecast by \$257 million (0.7%). Excluding non-economic changes, the current forecast is \$544 million (1.5%) higher than the initial forecast.

# The Relationship between the Cash and GAAP General Fund-State Revenue Forecasts

GAAP forecasts are based on the period in which the revenue is earned rather than received Legislation enacted in 1987 requires that the state's biennial budget be in conformance with Generally Accepted Accounting Principles (GAAP). It also requires a GF-S revenue forecast on both a cash and GAAP basis. The GAAP forecasts of GF-S revenue for the 2013-15 and 2015-17 biennia are presented in Tables 3.6 and 3.8 and the GAAP forecast of Lottery revenue transfers for both biennia is in Table 3.15. The primary difference between the cash and GAAP forecasts is the timing of the receipt of revenue. On a GAAP basis, revenue is credited to the biennium in which it is earned even though it may not have been received. The cash forecast, on the other hand, reflects expected cash receipts during a fiscal period. The forecast on a GAAP, or accrual, basis is primarily used for financial reporting. The cash forecast is used for cash flow management and revenue tracking. The cash forecast is also the forecast used in the state's budgetary balance sheet, which is the principal tool for assessing the General Fund's current surplus or deficit position. References to the GF-S forecast in the text of this chapter refer to the cash forecast unless otherwise noted. Likewise, figures from revenue tables other than Tables 3.6, 3.8 and 3.16 are projected on a cash basis.

# **Budgetary Balance Sheet for the 2013-15 Biennium**

The forecast implies GF-S reserves of \$1.31 billion at the end of the 2013-15 biennium and \$1.29 billion in reserves for GF-S, ELTA and OPA

Table 3.12 shows the budgetary balance sheet for the 2013-15 biennium as prepared by the Office of Financial Management and the House and Senate fiscal committees. The balance sheet shows not only projected GF-S spending and resources but also total projected spending and resources for the GF-S plus the other main non-transportation state-funded accounts: the Education Legacy Trust Account (ELTA) and the Washington Opportunity Pathways Account (OPA). As shown in the table, there was a beginning fund balance of \$167.5 million for the GF-S at the end of the 2011-13 biennium and the total balance for GF-S, ELTA and OPA stood at \$156.4 million. Based on the November 2014 revenue forecast and currently enacted budgets, total GF-S reserves are projected to be \$1,306.6 million at the end of the 2013-15 biennium. The projected total GF-S reserves are comprised of a GF-S ending balance of \$721.3 million and a balance of \$585.3 million in the Budget Stabilization Account. Projected combined reserves for the ELTA and OPA are -\$16.2 million, for total projected reserves of \$1,290.4 million for GF-S, ELTA and OPA at the end of the 2013-15 biennium.

#### Alternative Forecasts for the 2013-15 and 2015-17 Biennia

Optimistic scenario (billions):

13-15: +\$0.7 15-17: +\$3.0

Pessimistic scenario:

13-15: -\$0.8 15-17: -\$3.3 Chapter 2 outlines optimistic and pessimistic economic scenarios relative to the baseline economic forecast. The forecast assigns a probability of 55% to the baseline forecast, 20% to a scenario based on the upside risks and 25% to a scenario based on the downside risks. The revenue implications of these alternative scenarios for the 2013-15 biennium are shown in Table 3.13 and those of the 2015-17 biennium are shown in Table 3.14. For the 2013-15 biennium, the optimistic forecast generates \$34,109.7 million in GF-S revenue, \$669.8 million (2.0%) more than the baseline scenario, while the pessimistic forecast produces \$32,638.0 million in revenue, \$801.8 million (2.4%) less than the baseline. For the 2015-17 biennium, the optimistic forecast generates \$39,353.0 million in GF-S revenue, \$3,033.5 million (8.4%) more than the baseline scenario, while the pessimistic forecast produces \$32,983.1 million in revenue, \$3,336.4 million (9.2%) less than the baseline.

#### Near General Fund Forecasts for the 2013-15 - 2017-19 Biennia

Near General Fund Forecast (millions):

*2013-15:* \$33,834.6

*2015-17: \$36,747.5* 

2017-19: \$40.077.7 "Near General Fund" accounts are those included in the GF-S plus the Education Legacy Trust Account (ELTA). The ELTA was previously funded by a portion of the state tax on cigarettes and a tax on estates of over \$2 million. Legislation from the 2011 session, however, requires the cigarette taxes that formerly went into the account to instead be deposited into the GF-S. The Near General Fund forecast for the 2013-15 biennium is \$33,834.6 million, \$115.5 million more than the September forecast, and the forecast for the 2015-17 biennium is \$36,747.5 million, \$273.3 million more than the September forecast. The forecast of Near General Fund revenue for the 2017-19 biennium is \$40,077.7 million, \$463.7 million more than the September forecast. The Near General Fund forecast and recent history by fiscal year are presented in Table 3.17. The table also includes projected revenue for the OPA and the sum of Near General Fund plus OPA revenues by fiscal year.

<sup>\*</sup> Actual Base. Includes statutory and administrative changes to the tax base. Historical fiscal year data are from quarterly taxable sales reported by taxpayers on the state's Combined Excise tax return. Reported totals affected by enacted legislation. Major base changes include: exemption of off-premises food, beginning 1978:3 (fiscal 1979); extension of the sales tax base to off premises food (1982:2 to 1983:2); food again exempt 1983:3 (fiscal 1984); extension of the sales tax base to candy, gum and bottled water (June 1 - December 2, 2010); elimination of sales tax exemption for residential phone service (July 1, 2013).

# Glossary

**Biennium:** The state's two years budget cycle.

**Cash Basis:** Cash receipts received during a period. The Forecast Council forecasts revenues on a Cash and GAAP (Generally Accepted Accounting Principles) basis.

**CPI:** The Consumer Price Index for All Urban Consumers. The Bureau of Labor Statistics (BLS) updates the CPI monthly, surveying over 60,000 goods in 85 urban areas.

**Tax Elasticity:** A measure of how tax revenues respond to changes in personal income. If tax revenue elasticity is greater than one, a one percent change in personal income will be associated with more than a one percent increase in tax revenues. If elasticity is less than one, a one percent increase in personal income will be associated with less than a one percent increase in tax revenues.

**Fiscal Year**: The state's budget year. Washington State's fiscal year runs from July 1 through June 30. Fiscal year 2014, for example, ran from July 1, 2013 through June 30, 2014.

**GAAP Basis:** Generally Accepted Accounting Principles measure revenue in the period during which they accrue rather than the period in which they are received.

General Fund: Accounts for all financial resources and transactions not accounted for in another fund.

**General Fund-State (GF-S) Revenue:** Resources from state sources only, excludes federal monies. The general fund is the principal state fund supporting the operation of the state.

**Implicit Price Deflator, PCE (IPD):** The IPD for consumption is a by-product of the National Income and Product Accounts. It is derived by dividing current dollar (nominal) consumer expenditures by constant dollar (real) consumer expenditures.

**Mortgage Rate:** The average interest rate on 30 year conventional loan (as reported by Freddie Mac).

**Near General Fund:** All accounts included in the General Fund - State plus the Education Legacy Trust Account.

**Non-Wage Income:** Personal income other than from wages and salaries. The major components are: proprietor's income, transfer payments, and dividends, interest and rent.

**Real GDP:** Gross Domestic Production adjusted for the price level.

**Revenue Act:** Revenue Act taxes consist of the retail sales tax, use tax, business and occupation tax, public utility tax and tobacco products tax, plus penalty and interest payments associated with those taxes.

**Personal Income:** Income from wages and salaries; other labor income; proprietor's income; dividends, interest and rent; transfer payments; and a residence adjustment. It is reduced by employee contributions for social insurance.

**Seasonally Adjusted:** Adjusted for normal seasonal variations. Monthly statistics, such as the unemployment rate, are seasonally adjusted to make month-to-month comparisons possible.

**Seasonally Adjusted Annual Rate:** A rate for a given period that is typically less than one year, but that is computed as if the rate were for a full year and seasonally adjusted.

**Nonfarm Payroll Employment:** Civilian non-farm payroll employees. The self-employed, farm workers, members of the armed forces, private household employees, and workers on strike are excluded.
